

Mikrotik Training Basic

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

Jadwal Training

	Session 1	Session 2	Session 3	Session 4
Hari 1	Introduction Pre-Test	TCP/IP Instalation	Basic Configuration	
Hari 2	Bridge	Wireless		Routing
Hari 3	Firewall		QOS	
Hari 4	Hotspot		VPN	Test

Jadwal Harian

- Sessi 1 08.30 – 10.00
- Coffee Break 10.00 – 10.30
- Sessi 2 10.30 - 12.00
- Lunch 12.00 – 13.00
- Sessi 3 13.00 – 14.30
- Coffee Break 14.30 – 15.00
- Sessi 4 15.00 - 17.00

New Training Scheme 2010

- **Basic/Essential Training**

- MikroTik Certified Network Associate (MTCNA)

- **Advanced Training**

- Certified Wireless Engineer (MTCWE)
- Certified Routing Engineer (MTCRE)
- Certified Traffic Control Engineer (MTCTCE)
- Certified User Managing Engineer (MTCUME)
- Certified Inter Networking Engineer (MTCINE)

Certification Test

- Diadakan oleh **Mikrotik.com** secara online
- Dilakukan pada sesi terakhir
- Jumlah soal : **25** Waktu: **60 menit**
- Nilai minimal kelulusan : **60%**, Trainer : **75%**
- Yang mendapatkan nilai **50%** hingga **59%** berkesempatan mengambil “***second chance***”
- Yang lulus akan mendapatkan sertifikat yang diakui secara internasional

Introduction to Mikrotik

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

Citraweb Nusa Infomedia

- Using Mikrotik since 2001, as Wireless ISP (Citra-Net)
- Mikrotik OEM Authorized Reseller (2002)
<http://www.mikrotik.com/1howtobuy.html>
- One engineer:
Mikrotik Certified Consultant (2005)
<http://www.mikrotik.com/consultants.html>
- Mikrotik Certified Training Partner (2005)
<http://www.mikrotik.com/training.php>

Citraweb Nusa Infomedia

- Head Office

- Jalan Petung 31 Papringan
Yogyakarta 55281
Telp: 0274-554444
Fax: 0274-553055

- Rep. Office

- Gd Cyber Lt 11
Jl Kuningan Barat 8 Jakarta 12710
Telp: 021-5209612
Fax: 021-5209614

What Is Mikrotik?

- Software Router untuk PC (x86, AMD, dll) → **RouterOS**
 - Menjadikan PC biasa memiliki fungsi router yang lengkap
 - Diinstall sebagai Operating System, tidak membutuhkan operating system lainnya
- Hardware untuk jaringan (terutama wireless) → **RouterBoard**
 - Wireless board
contoh: RB400, RB600, RB750, RB1000
 - Wireless interface (R52, R52H, R5H, R52N, R2N)
 - menggunakan RouterOS sebagai software

What Is Mikrotik?

- Mikrotik adalah kependekan dari “**mikrotikls**”
- Artinya: “network kecil” dalam bahasa Latvia

Routerboard for Wireless

Jenis	Processor	RAM	Ether	MiniPCI	USB	Radio	Lisensi
RB800	MPC8544 800MHz	256MB	3 (gig)	4	-	-	6
RB435G	AR71xx 680MHz	256MB	3 (gig)	5	2	-	5
RB433UAH	AR71xx 680MHz	128MB	3	3	2	-	5
RB433/ AH	AR71xx 300/ 680MHz	64MB/128MB	3	3	-	-	4 / 5
RB411UAHR	AR71xx 680 MHz	64MB	1	1	1	1	4
RB411AH	AR71xx 680 MHz	64MB	1	1	-	-	4
RB411U/ AR	AR71xx 300 MHz	32MB/64MB	1	1	1 / -	- / 1	4
GrooveA-5Hn	AR72xx 400MHz	64MB	1	-	-	1	4
RB711A-5nH	AR72xx 400MHz	64MB	1	-	-	1	4
Groove-5Hn	AR72xx 400MHz	32MB	1	-	-	1	3
RB711-5nH	AR72xx 400MHz	32M	1	-	-	1	3

- For Client or Point to Point Connection

Routerboard for Indoor Router

Jenis	Processor	RAM	Ethernet	MiniPCI	Lisensi
RB1100AH X2	PPC 1Ghz dual Core	2GB	13 (gigabit)	0	6
RB1100AH	PPC 1Ghz	2GB	13 (gigabit)	0	6
RB1200	PPC 1Ghz	512MB	10 (gigabit)	0	6
RB493G	AR71xx 680 MHz	256MB	9 (gigabit)	3	5
RB493 / AH	AR71xx 300 / 680 MHz	64MB / 128MB	9	3	4 / 5
RB450G	AR71xx 680 MHz	256MB	5 (gigabit)	0	5
RB450	AR71xx 300 MHz	32MB	5	0	5
RB750	AR72xx 400MHz	32MB	5	0	4
RB750GL	AR72xx 400MHz	64MB	5 (gigabit)	0	4

Discontinued Hardware

- RB100 series
 - RB112, RB133, RB133C
 - RB153, RB150, RB192
- RB200 series
 - RB230
- RB300 series
 - RB333
- RB400 series
 - RB411A, RB411R
- RB500 series
 - RB532, RB511
- RB600 series
 - RB600
- RB700 series
 - RB750G
- RB1000 series
 - RB1000, RB1100

RB1100AH / X2

- 13 Port Gigabit ethernet
- 1GHz Network Processor / Dual Core
- RAM: 2GB
- up to:
 - 2 Gbps
 - 250.000 pps / 1M pps
- 1U rackmount
- Bypass Function

RB800

- 3 Gigabit Ethernet
- 4 Minipci Slot
- DaughterBoard Expandable
- CF slot
- MPC8544 800MHz CPU
- 256 DDR SDRAM

Daughter Board

RB433UAH

- 3 Ethernet, 3 Minipci
- Atheros AR7161 680MHz
- RAM: 128MB
- With micro-SD slot
- RouterOS Level 5
- 2 port USB

OutDoor Case

RB411 / U / AR / AH / UAHR

- CPU: Atheros
 - AR7130 300MHz (411/U/AR)
 - AR7161 680 MHz (411AH/UAHR)
- Memory:
 - 32 MB (411/U)
 - 64MB (411AR/UAHR/AH)
- Wireless Embedded (411AR/UAHR)
- 1 ethernet
- 1 MiniPCI (411/U/AR/AH/UAHR)
- Lisensi RouterOS:
 - Level 3 (411)
 - Level 4 (411U/AR/AH/UAHR)

RB493/AH/G

- 9 ethernet (gigabit di 493G)
- 3 Minipci Slot
- Processor :
 - Atheros AR7161 680MHz (493AH & G)
 - Atheros AR7130 300MHz (493)
- RAM: 64MB
- RouterOS:
 - Level 4 (RB493)
 - Level 5 (RB493AH & G)

Switch Mode

● ● ● | Embedded Solution

- Embedded Antenna 2,4GHz & 5GHz
- With Routerboard 411 series / 711 Series

RB450 / G

- 5 port Ethernet / gigabit
- Tanpa minipci port
- Processor : Atheros
300MHz / 680 MHz
- RAM: 64 / 256 MB
- RouterOS Level 5

● ● ● | RB750 / GL

- Produk routerboard terhemat dan terkecil
- Processor : AR7240 400Mhz
- 5 ethernet port (750)
5 gigabit port (750GL)
- Lisensi Level 4

RB751U-2HND

- High power 1W
802.11b/g/n wireless AP
- 5 Port Ethernet
- 1 Port USB
 - For Modem
 - For Flashdisk
- 2x2 MIMO Integrated Antenna

Intregated Antenna

Wireless Interface

- R52/H (a/b/g)
 - Atheros chipset
 - MiniPCI type interface
 - 65 mWatt / **350 mWatt**
 - 3 band wireless
 - 2.4 GHz, 5.2 GHz, 5.8 GHz
 - Custom Frequency Support
 - 2.1 – 2.5 GHz
 - 4.9 – 6.0 GHz

R52N (a/b/g/n)

NEW
PRODUCT

- Dual band IEEE 802.11a/b/g/n standard
- Output Power of up to 25dBm @ b/g/n Band
- Support for up to 2x2 MIMO with spatial multiplexing
- Four times the throughput of 802.11a/g
- Atheros AR9220, chipset
- 2 X U.FL Antenna Connector
- Operating temperatures: 0°C to 60°C
- Power consumption MAX 2.4W
- Modulations: OFMD: BPSK, QPSK, 16 QAM, 64QAM DSSS: DBPSK, DQPSK, CCK
- High Performance (up to 300Mbps physical data rates and 200Mbps of actual user throughput) with Low Power Consumption
- ESD protection agaist +/-10kV ESD discharge on Antenna port

Wireless N - Performance

The screenshot displays the Mikrotik WinBox Bandwidth Test interface for interface wlan1. The configuration is as follows:

- Test To: 1.1.1.2
- Protocol: udp
- Local UDP Tx Size: 1500
- Remote UDP Tx Size: 1500
- Direction: both
- TCP Connection Count: 20
- Local Tx Speed: [empty] bps
- Remote Tx Speed: [empty] bps
- User: admin
- Password: [empty]
- Tx/Rx 10s Average: 89.5 Mbps/106.4 Mbps
- Tx/Rx Average: 71.2 Mbps/83.6 Mbps

The interface configuration for wlan1 is shown on the right:

- Wireless: HT
- HT Tx Chains: 0 (chain0) and 1 (chain1) are checked.
- HT Rx Chains: 0 (chain0) and 1 (chain1) are checked.
- HT AMSDU Limit: 8192
- HT AMSDU Threshold: 8192
- HT Guard Interval: any
- HT Extension Channel: below control

The AP Client information is shown below the interface configuration:

AP Client <00:0C:42:61:22:DF>

The Statistics tab is selected, showing the following performance metrics:

- Tx/Rx Rate: 270.0Mbps-HT/270.0Mbps-HT
- Tx/Rx Packets: 851 744/1 009 440
- Tx/Rx Bytes: 1229.5 MiB/1457.1 MiB
- Tx/Rx Frames: 851 529/1 009 192
- Tx/Rx Frame Bytes: 1229.5 MiB/1456.7 MiB

A performance graph at the bottom left shows Tx and Rx rates over time. The legend indicates Tx: 92.8 Mbps and Rx: 106.0 Mbps.

- Throughput: 195 ~ 200 Mbps

Mikrobits – Enterprise Router

- 7 / 11 Intel gigabit ethernet
- **Multi Core Processor**
- 1U rackmount
- 2 GB RAM
 - Industrial grade
- Performance :
 - **2-4 Gbps** full duplex (**Ainos**)
 - **3-5 Gbps** full duplex (**Celoica**)
- 9000 jumbo frame supported

Mikrobits – Fiber Optic Router

- **16** Intel gigabit ethernet
- **Xeon Multi Core Processor**
- 1U rackmount
- 2 GB RAM
 - Industrial grade
- Performance :
 - **6-8 Gbps** full duplex
- 9000 jumbo frame supported
- **4 SFP or 8 SFP**

Torch

Mikrotik RouterOS

- RouterOS adalah sistem operasi dan perangkat lunak yang mampu membuat PC berbasis Intel/AMD mampu melakukan fungsi **Router, Bridge, Firewall, Bandwidth Management, Proxy, Hotspot** dan masih banyak fungsi lainnya
- RouterOS dapat melakukan hampir semua fungsi networking dan juga beberapa fungsi server.

Fitur Mikrotik RouterOS (1)

- IP Routing
 - Static route & Policy route
 - Dynamic Routing (RIP, OSPF, BGP)
 - Multicast Routing
- Interface
 - Ethernet, V35, G703, ISDN, Dial Up Modem
 - Wireless : PTP, PTMP, Nstream, WDS, Mesh
 - Bridge, Bonding, STP, RSTP
 - Tunnel: EoIP, IPSec, IPIP, L2TP, PPPoE, PPTP, VLAN, MPLS, OpenVPN, SSTP
- Firewall
 - Mangle, NAT, Address List, Filter Rules, L7 protocol
- Bandwidth Management
 - HTB, PFIFO, BFIFO, SFQ, PCQ, RED

● ● ● | Fitur Mikrotik RouterOS (2)

- Services (Server)
 - Proxy (cache), Hotspot, DHCP, IP Pool, DNS, NTP, Radius Server (User-Manager), Samba (v6.xx)
- AAA
 - PPP, Radius Client
 - IP Accounting, Traffic Flow
- Monitoring
 - Graphs, Watchdog, Torch, Custom Log, SNMP, The Dude Monitoring Tools
- Diagnostic Tools & Scripting
 - Ping, TCP Ping, Tracert, Network Monitoring, Traffic Monitoring, Scheduller, Scripting
- VRRP

Licence Level

Level	3	4	5	6
Upgrade time	dalam 1 versi mayor dan versi berikutnya			
Wireless CPE/PTP	yes			
Wireless AP	no	yes		
Sync Interface	no	yes		
EoIP	1	unlimited		
PPPoE	1	200	500	unlimited
PPTP & L2TP	1	200	unlimited	
VLAN, Firewall, Queue	unlimited			
Proxy, Radius Client	yes			
Dynamic Routing	RB = yes	yes		
Hotspot Active User	1	200	500	unlimited
User Manager Active User	10	20	50	unlimited

- Level 0 = Trial 24 Jam , Level 1 = Hanya bisa 1 rule di semua fitur

Produk Mana Yang Dipilih

- Kenalilah kebutuhan Anda :
 - Fungsi perangkat (Router, Server dll)
 - Jumlah trafik (Real Troughput)
 - Fitur yang dibutuhkan (Proxy, Hotspot, Radius)
 - Interface yang dibutuhkan
- Baik menggunakan PC ataupun menggunakan Routerboard, fitur Mikrotik RouterOS selalu sama (tergantung pada level yang digunakan)

Buyer's Guide

- 300 / 400 Mhz Processor (< **5Mbps** Traffic)
 - *RB450, RB750, RB433, RB493*
- 680 Mhz Processor (**5 ~ 20 Mbps** Traffic)
 - *RB450G, RB433AH, RB493G*
- 1Ghz Processor (**20 ~ 100 Mbps** Traffic)
 - *RB1200, RB1100AH*
- 1Ghz Dual Core Processor (> **100 Mbps** Traffic)
 - *RB1100AHx2*
- Multi Core x86 Processor (> **1 Gbps** Traffic)
 - *Mikrobits : Aneto, Ainos, Dinara*
- Xeon Processor (> **10 Gbps** Traffic)
 - *Mikrobits : Dinara*

Quiz !

- Pada sebuah router mikrotik terdapat dua service yang aktif yaitu HOTSPOT server (150 user) dan PPTP server (120 user), maka Ruter Mikrotik tersebut membutuhkan license Level ?
- Pada Routerboard RB411UAHR **tidak** memerlukan wireless card miniPCI tambahan untuk menjadikan routerboard tersebut Access Point 5Ghz (Benar / Salah), Kenapa ?
- Kita bisa menambahkan storage pada Routerboard RB450G ? (Benar / Salah)

Mikrotik Installation

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

● ● ● | Instalasi Mikrotik

- Media Instalasi (Penyimpan) Mikrotik RouterOS
 - Harddisk
 - CF Disk
 - DOM (Disk On Module)
 - SATA DOM (coming soon on mikrotik.co.id)
 - USB Flash Disk
 - komputer harus bisa booting dari USB (setting BIOS)
 - Routerboard

Installation Method

- **CD**
 - Create CD from CD image (iso file)
 - For PC Router Fresh-Install
 - CD-Rom Required
- **Netinstall**
 - Via network using NetInstall program.
 - For PC Router (Fresh-Install / Re-Install)
 - PXE, EtherBoot Required
 - For Reinstall Routerboard

Download Area

Software Instalasi

CD Instalation

Jika Anda bermaksud menginstall Mikrotik di PC Anda, mungkin file inilah yang Anda butuhkan untuk membuat CD Boot instalasi. [[panduan](#)]

[mikrotik-4.17.iso](#) (19.16 MByte, didownload 8655 kali)

Mikrotik NetInstall

Software yang dibutuhkan untuk melakukan netinstall. Masih dibutuhkan juga modul all_packages di bawah. [[panduan](#)].

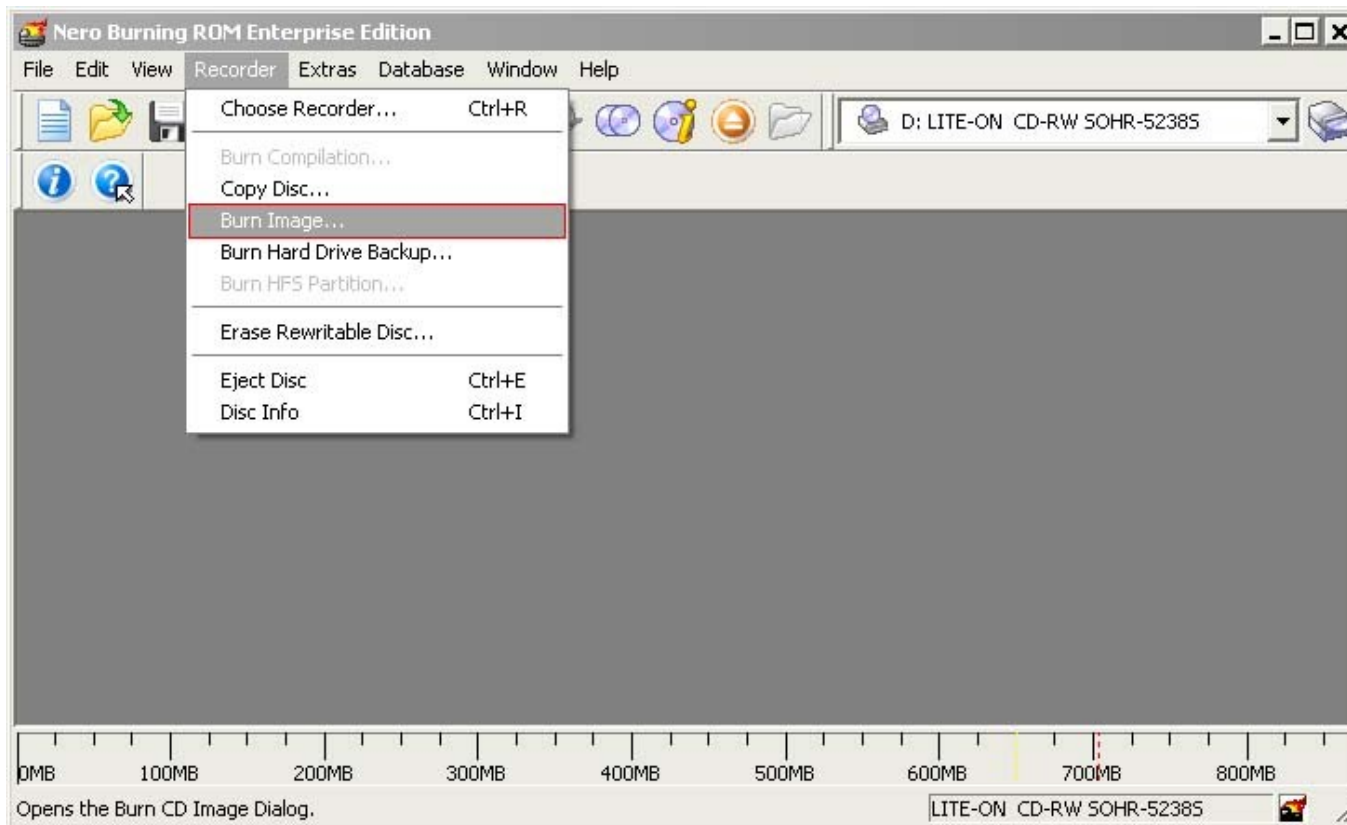

[netinstall.zip](#) (6.05 MByte, didownload 37519 kali)

[netinstall-4.17.zip](#) (11.11 MByte, didownload 3283 kali)

- **Mikrotik.co.id – Download Area**
 - Connected 1Gbps to OpenIXP.
- **Mikrotik.com – Download Area**

CD Installation (1)

- Download ISO file (mikrotik-***.iso) dan buatlah CD bootable dengan file tersebut.

CD Installation (2)

- Gunakanlah CD yang telah dibuat untuk melakukan booting pada komputer
- Pilihlah module yang ingin diinstall

```
Welcome to MikroTik Router Software installation
```

```
Move around menu using 'p' and 'n' or arrow keys, select with 'spacebar'.  
Select all with 'a', minimum with 'm'. Press 'i' to install locally or 'r' to  
install remote router or 'q' to cancel and reboot.
```

```
[X] system          [ ] isdn           [ ] synchronous  
[X] ppp            [ ] lcd            [ ] telephony  
[X] dhcp           [ ] ntp            [ ] ups  
[X] advanced-tools [ ] radiolan       [ ] web-proxy  
[ ] arlan          [ ] routerboard    [ ] wireless  
[ ] gps            [X] routing  
[ ] hotspot        [X] security
```

CD Installation (3)

- Warning: all data on the disk will be erased!
Continue? [y/n]
Choose Yes
- Do you want to keep old configuration? [y/n]:
Yes/No
- Creating partition...
- Formatting disk...
- Software installed.
- Press ENTER to reboot

Installation Check

- Default Login User dan password
 - user = admin dan password = [kosong]
- Welcome menu

```
MikroTik 3.20  
MikroTik Login: admin  
Password: _
```

License Trial

- License level 0 = Trial time 24 jam

MikroTik RouterOS 3.20 (c) 1999-2009

<http://www.mikrotik.com/>

ROUTER HAS NO SOFTWARE KEY

You have 23h49m to configure the router to be remotely accessible,
and to enter the key by pasting it in a Telnet window or in Winbox.
See www.mikrotik.com/key for more details.

Current installation "software ID": FTGX-E1N
Please press "Enter" to continue!

[admin@MikroTik] > _

Access the Router (First Time)

- **Direct Console** (Keyboard & Monitor)
- **MAC-Telnet** – NeighbourViewer.exe
- **MAC-Winbox** – winbox.exe

The image shows two overlapping windows from MikroTik. The background window is 'MikroTik Neighbor Viewer', which displays a table of discovered devices. The foreground window is 'MikroTik WinBox Loader v2.2.18', which is used to connect to a specific device.

MAC Address	IP Address	Identity	Version	Platform	Unpacking
00:0C:42:27:67:83	192.168.5.51	MikroTik	5.4	MikroTik	none

```

The screenshot shows the 'License' dialog box in Winbox. The dialog has a title bar with a close button. On the left, there are several input fields: 'Software ID' with the value 'F724-MMT', 'Upgradable To' (empty), 'Level' with the value '0', 'Features' (empty), and 'Expires In' with the value '15:39:27'. On the right side, there is a vertical stack of buttons: 'OK', 'Paste Key' (highlighted with a red rectangle), 'Import Key...', 'Export Key...', 'Upgrade/Get New Key...', and 'Update Key'.

The screenshot shows a context menu with the following items and keyboard shortcuts:

- Message
- Copy (Ctrl+Ins) - This item is highlighted in blue.
- Copy to... (Alt+Ins)
- Select All (Ctrl+A)
- Find... (Ctrl+F)
- Find next (F3)
- Preferences...

Netinstall

- Metode Netinstall biasa digunakan untuk melakukan install ulang RouterBoard / PC Router yang sudah support net-boot.

Netinstall

- Download program netinstall dan module yang dibutuhkan

Mikrotik NetInstall

Software yang dibutuhkan untuk melakukan netinstall. Masih dibutuhkan juga modul all_packages di bawah. [[panduan](#)].

[netinstall.zip](#) (6.05 MByte, didownload 37519 kali)

[netinstall-4.17.zip](#) (11.11 MByte, didownload 3283 kali)

Software Upgrade

Semua modul dalam satu paket

Satu buah paket yang berisikan semua modul Mikrotik. Untuk penggunaan versi 2.9 atau yang lebih baru, gunakanlah paket ini. [[panduan](#)]

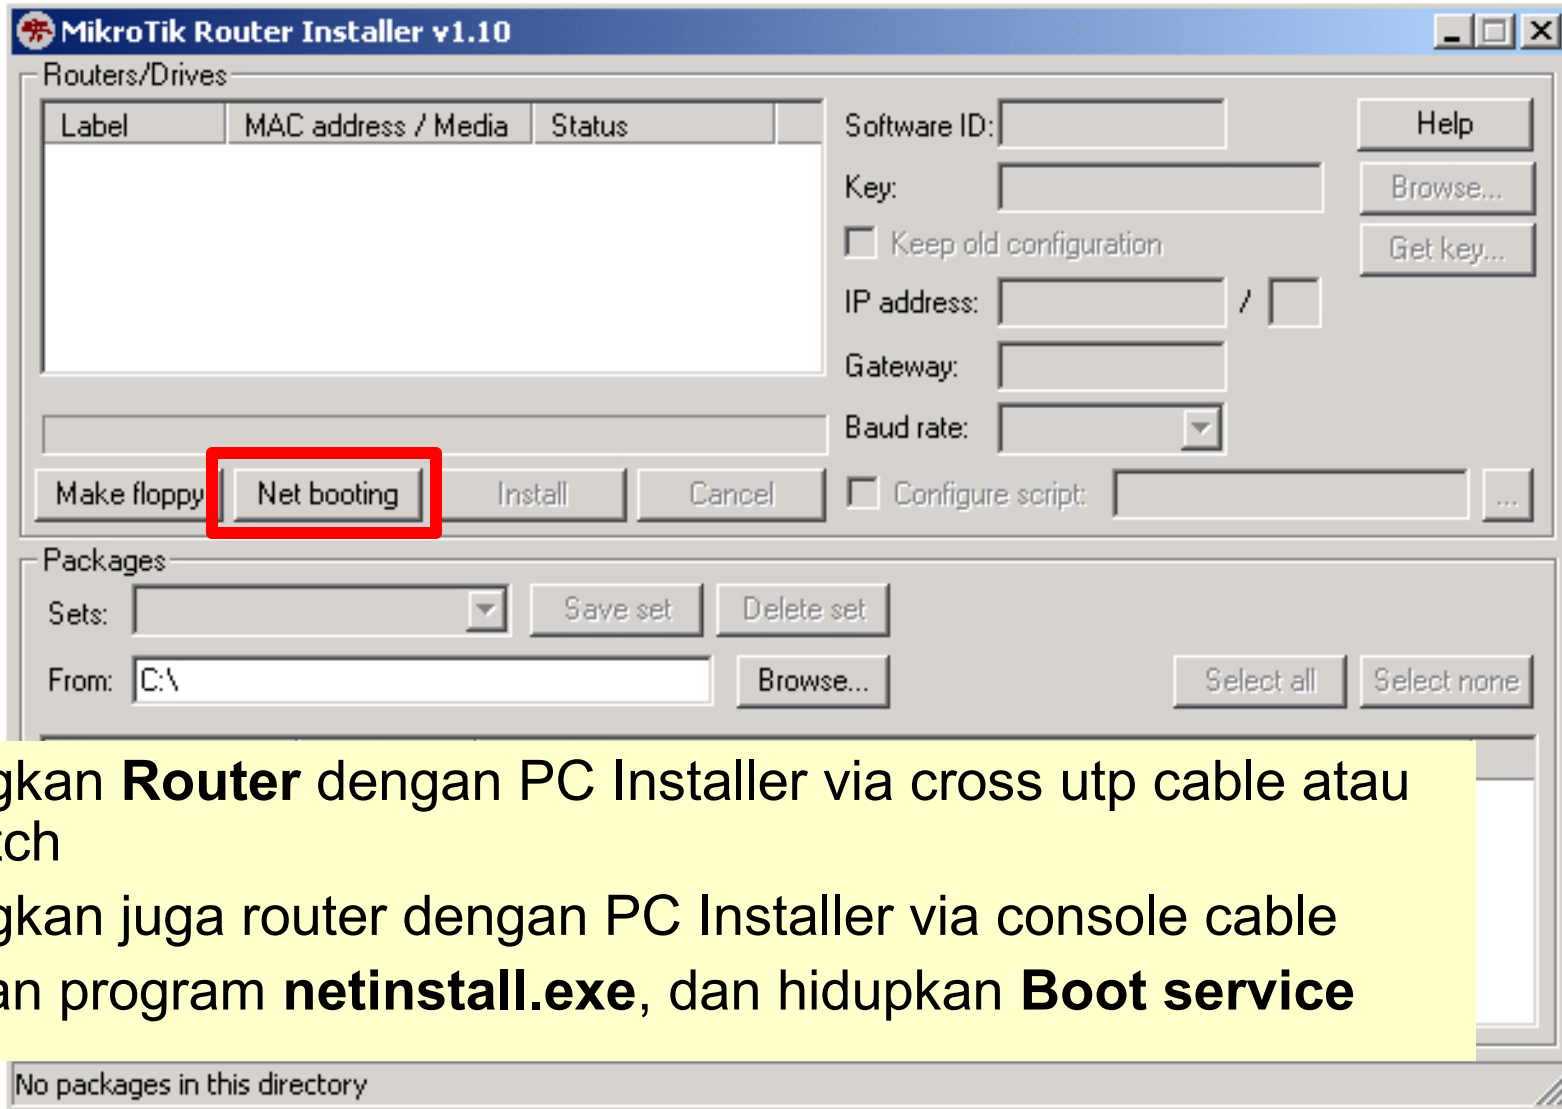

[routeros-mipsbe-4.17.npk](#) (12.21 MByte, didownload 4262 kali)

[routeros-mipsle-4.17.npk](#) (11.79 MByte, didownload 901 kali)

[routeros-powerpc-4.17.npk](#) (11.92 MByte, didownload 1040 kali)

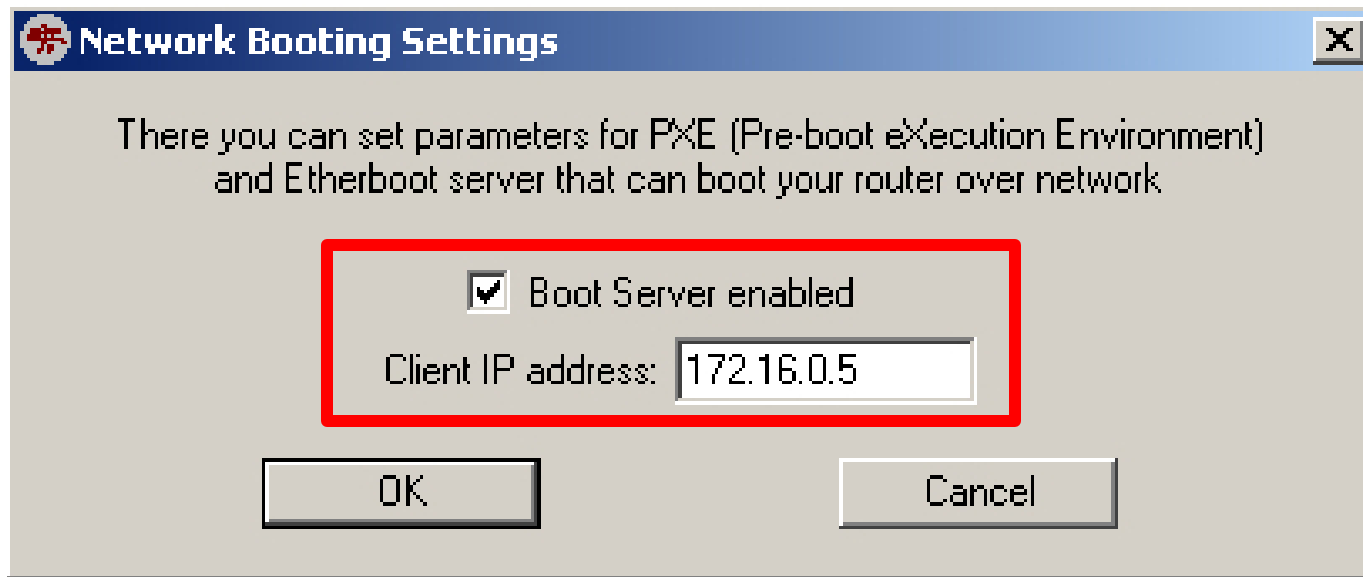

[routeros-x86-4.17.npk](#) (14.57 MByte, didownload 1576 kali)

Netinstall

- Hubungkan **Router** dengan PC Installer via cross utp cable atau via switch
- Hubungkan juga router dengan PC Installer via console cable
- Jalankan program **netinstall.exe**, dan hidupkan **Boot service**

Netinstall - Config

Masukkanlah **IP Address** yang berbeda dengan IP Address laptop / komputer Anda, namun berada dalam **subnet yang sama**

Netinstall – BIOS Setting

- **Hidupkan router, masuk ke setting BIOS**

```
RouterBOOT booter 2.12
```

```
RouterBoard 333
```

```
CPU frequency: 333 MHz
```

```
Memory size: 64 MB
```

```
Press any key within 2 seconds to enter setup
```

Netinstall – BIOS Setting

```
RouterBOOT-2.12
What do you want to configure?
  d - boot delay
  k - boot key
  s - serial console
  o - boot device
  f - cpu frequency
  r - reset booter configuration
```

- **Konfigurasi booting pada BIOS (RouterBoot)**

```
  g - upgrade firmware
  i - board info
  p - boot protocol
  t - do memory testing
  x - exit setup
```

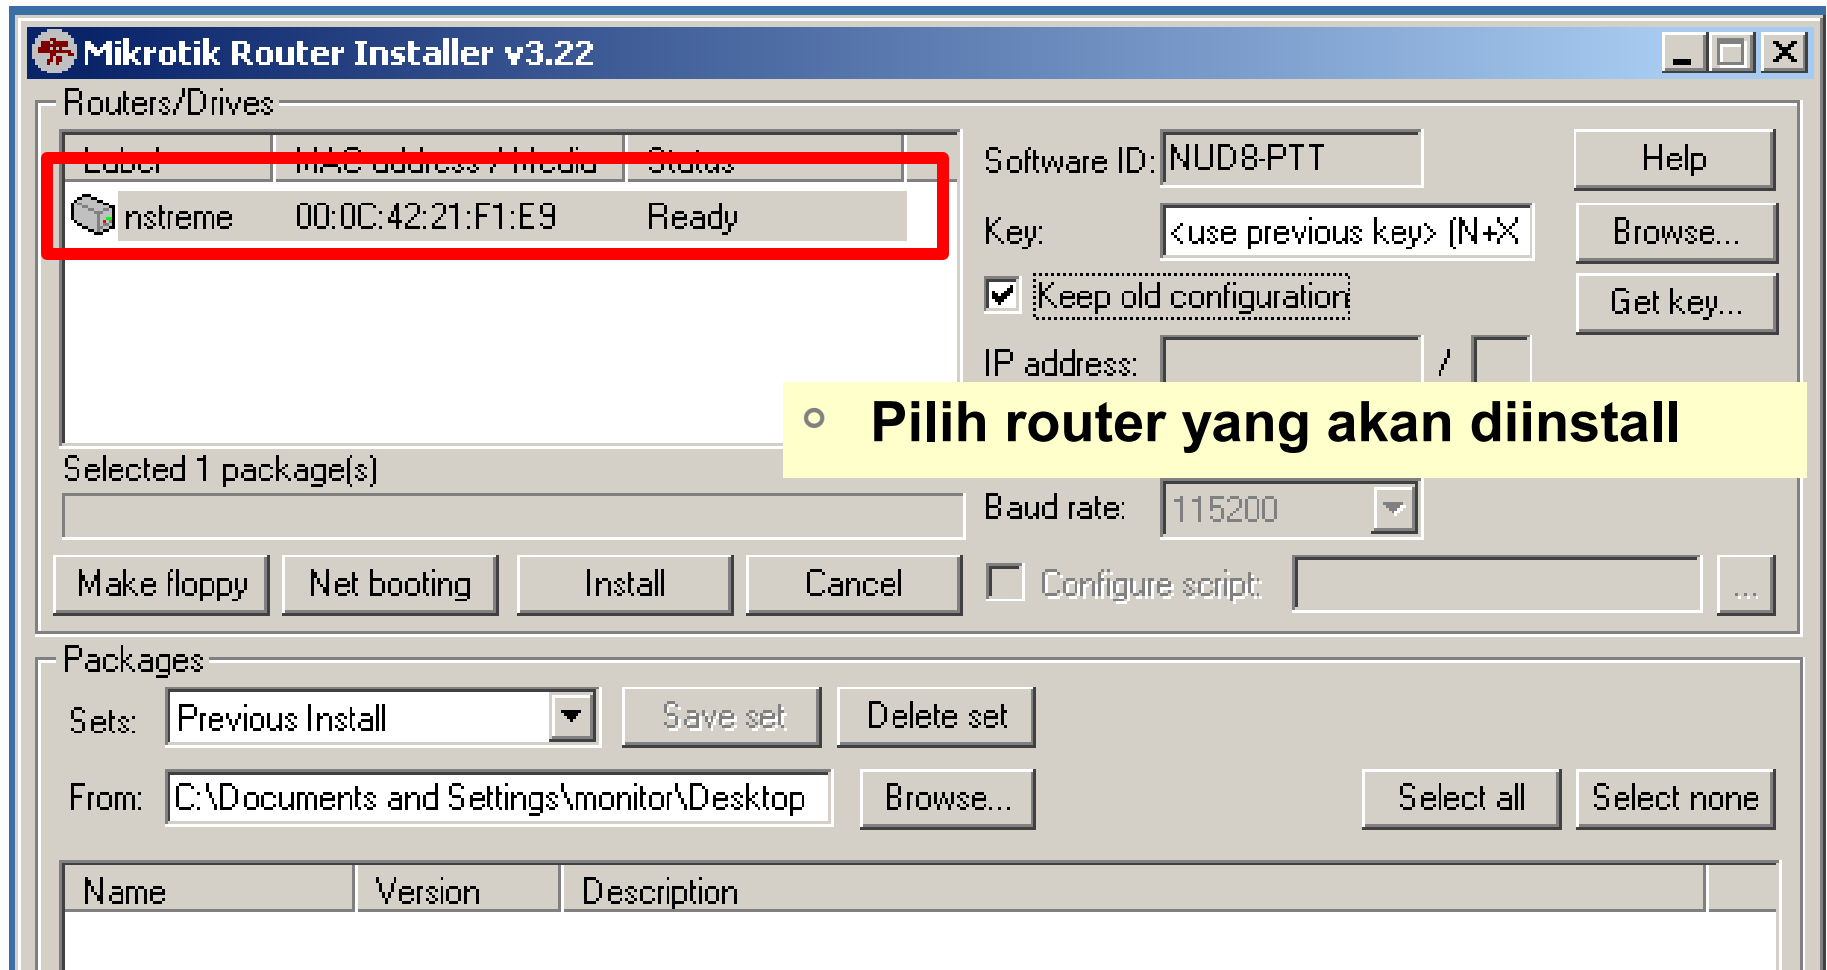

```
your choice: o - boot device
```

Netinstall – BIOS Setting

```
Select boot device:  
* e - boot over Ethernet  
n - boot from NAND, if fail then Ethernet  
1 - boot Ethernet once, then NAND  
o - boot from NAND only  
b - boot chosen device  
your choice: █
```

- **Pilih boot-device : 1 – boot ethernet once, then NAND**

Netinstall - Install

The screenshot shows the Mikrotik Router Installer v3.22 window. A table titled 'Routers/Drives' is visible, with the following data:

Label	MAC address / Media	Status
 nstreme	00:0C:42:21:F1:E9	Ready

The 'nstreme' row is highlighted with a red border. To the right of the table, there are fields for 'Software ID: NUD8-PTT', 'Key: <use previous key> [N+X]', a checked checkbox for 'Keep old configuration', and an 'IP address:' field. Below the table, there are buttons for 'Make floppy', 'Net booting', 'Install', and 'Cancel'. A yellow callout box with a bullet point contains the text: 'Pilih router yang akan diinstall'. At the bottom, there is a 'Packages' section with a 'Sets:' dropdown set to 'Previous Install', a 'From:' field containing 'C:\Documents and Settings\monitor\Desktop', and buttons for 'Save set', 'Delete set', 'Browse...', 'Select all', and 'Select none'.

Packages

Sets: Save set Delete set

From: C:\Documents and Settings\monitor\Desktop\ Browse...

Name	Version	Description
<input type="checkbox"/> option	3.22	Contains some important stuff for debugg
<input type="checkbox"/> routeros-mipsbe	3.22	RouterOS for RouterBOARD RB4xx, include

Browse for Folder ? X st package

- Pilih module yang akan diinstall

There are 3 package(s) in this directory

OK Cancel

Netinstall - Install

Mikrotik Router Installer v3.22

Routers/Drives

Label	MAC address / Media	Status
nstreme	00:0C:42:21:F1:E9	Ready

Selected 1 package(s)

Name	Version	Description
<input checked="" type="checkbox"/> routeros-mipsbe	3.22	RouterOS for RouterBOARD RB4xx, includes all supported features

Start install Selesai

Netinstall – Reboot

Netinstall - Cleanup

```
Select boot device:  
* e - boot over Ethernet  
n - boot from NAND, if fail then Ethernet  
l - boot Ethernet once, then NAND  
o - boot from NAND only  
b - boot chosen device  
your choice: █
```

- **Kembalikan boot ke IDE / NAND drive**

- **Video Tutorial :**
 - http://www.mikrotik.co.id/artikel_lihat.php?id=25

Reset Password

- Reset password bisa dilakukan di beberapa routerboard menggunakan tombol “**Reset**”

- Hard Reset :

To reset RouterOS config
Hold metal object in here
while the board boots.

Quiz !

- Routerboard RB433UAH bisa menggunakan USB flashdisk sebagai penyimpanan RouterOS Mikrotik ?
- Netinstall menggunakan kabel serial untuk transfer data OS mikrotik pada saat instalasi berlangsung. (Benar / Salah), Kenapa ?

System Package Check

- Pada terminal: `/system package print`

	Name	Version	Build Time	Scheduled
	routeros-x86	3.22	Mar/16/2009 10:48:17

12 items

RouterOS Package

Nama Paket	Fungsi
advanced-tools	email client, ping, netwatch
dhcp	DHCP server dan client
hotspot	hotspot gateway
ntp	NTP server
ppp	PPP, PPTP, L2TP, PPPoE
routerboard	Fungsi khusus Routerboard
routing	RIP, OSPF, BGP
security	secure winbox, SSH, IPSec
wireless	Wireless 802.11a/b/g
user-manager	User-Manager management system
ipv6	IPv6

Version Upgrade

- Download modul terlebih dahulu
 - routers-**mipsbe**-3.xx.npk (RB400 & RB700)
 - routers-**mipsle**-3.xx.npk (RB100 & RB500)
 - routers-**powerpc**-3.xx.npk (RB300 & RB600)
 - routers-**x86**-3.xx.npk (PC & RB200)
- FTP modul tersebut ke router
 - Harus menggunakan userid yang full access
 - FTP://xxx.xxx.xxx.xxx ← **IP Router**
- Soft Reboot, jangan hard reboot
 - Command - **"/system reboot"**

FTP ke Router

IP Router

FTP (File Transfer Protocol)

Server: 192.168.5.10 Port: 21

URL: <ftp://admin@192.168.5.10:21/>

Version Downgrade

- Download modul yang lama
- FTP dan copykan modul OS versi yang lama tersebut ke FTP router.
- Cek modul : */file print*
- **“/system package downgrade”**
admin@MikroTik] system package> downgrade
Router will be rebooted. Continue? [y/N]: y
system will reboot shortly

Command Line Interface

- Struktur *Command* dalam mikrotik mirip dengan shell dalam unix
- Dibagi ke dalam beberapa kelompok sesuai hirarki menu levelnya
- Misalnya menambahkan ip address
 - *ip address add address=192.168.0.1/24 interface=ether1*
 - Menu **ip** (level0) memiliki sub menu **address** (level1)

General Command CLI

add	menambahkan entri tertentu
comment	membubuhkan komentar pada suatu entri
disable	menonaktifkan entri tertentu
enable	mengaktifkan entri tertentu
monitor	memonitor parameter secara live
print	menampilkan semua entri secara singkat
print detail	menampilkan semua entri secara lengkap
remove	menghapus entri tertentu
set	mengubah parameter tertentu pada sebuah entri

Navigasi pada CLI

?	Menampilkan pilihan perintah yang tersedia beserta keterangannya
[TAB]	Melengkapi perintah yang baru terketik sebagian
[TAB][TAB]	Menampilkan pilihan perintah yang tersedia beserta keterangannya
..	Berpindah 1 level ke atas pada hirarki menu
/	Berpindah ke level teratas pada hirarki menu

Command Line Interface

- Quick Typing
 - [TAB] untuk melengkapi perintah tertentu
 - */system shut [TAB] = /system shutdown*
 - Juga bisa menggunakan singkatan
 - */sys shut = /system shutdown*
- Untuk Detail penggunaan Script di RouterOS Mikrotik bisa didapatkan manualnya di :
 - <http://wiki.mikrotik.com/wiki/Scripting>

Quiz !

- Paket apa saja yang dibutuhkan untuk menginstall mikrotik (Minimal):
 - System
 - Routing
 - Advance-tools
 - DHCP

- Apakah bisa menambahkan driver secara manual di RouterOS ?

Basic TCP/IP

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

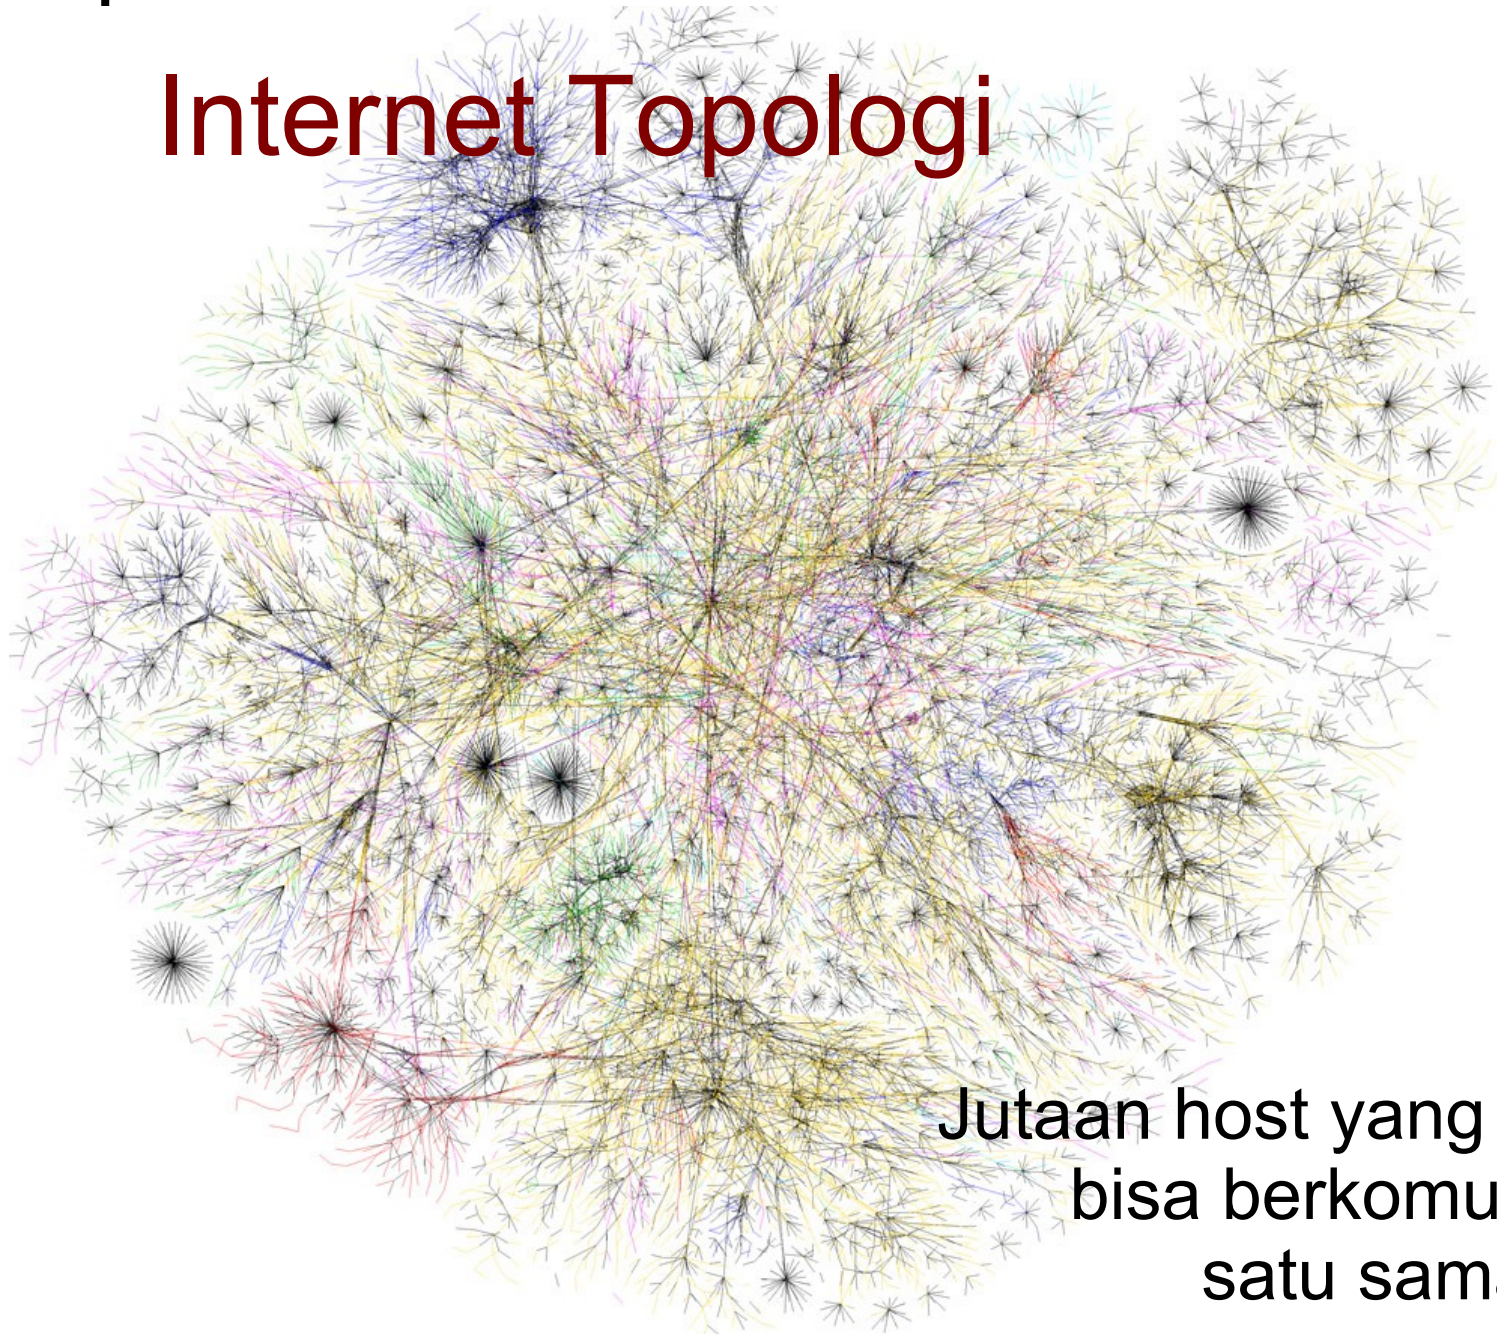

(Mikrotik Certified Training Partner)

Training Outline

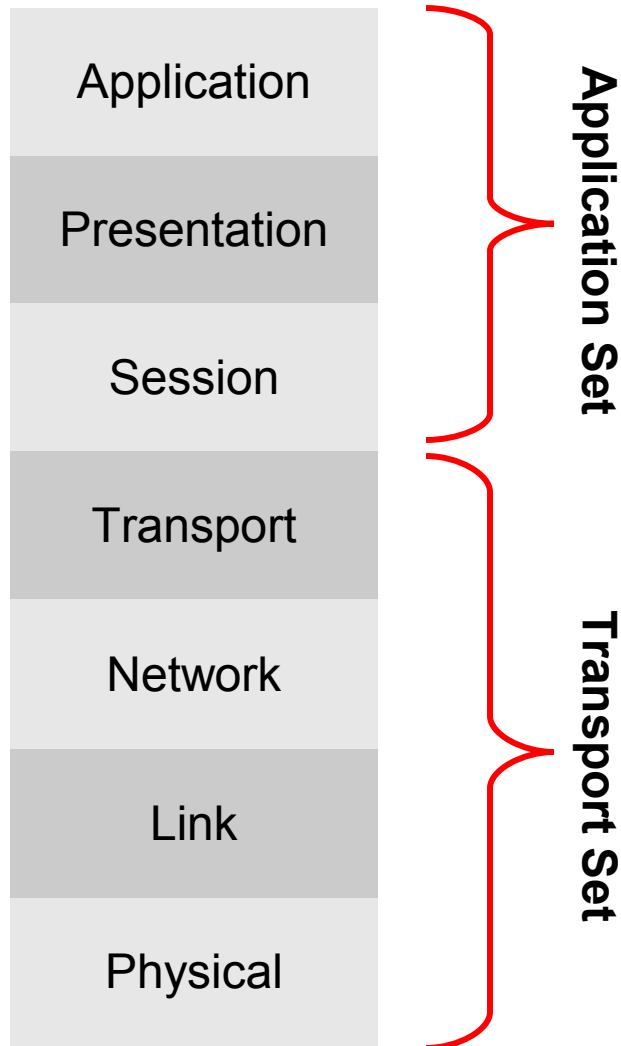

- OSI Layer
- Packet Header
- Mac Address
- IP Address and subnetting
- IP Protocol
- Basic networking, DNS, gateway

Internet Topologi

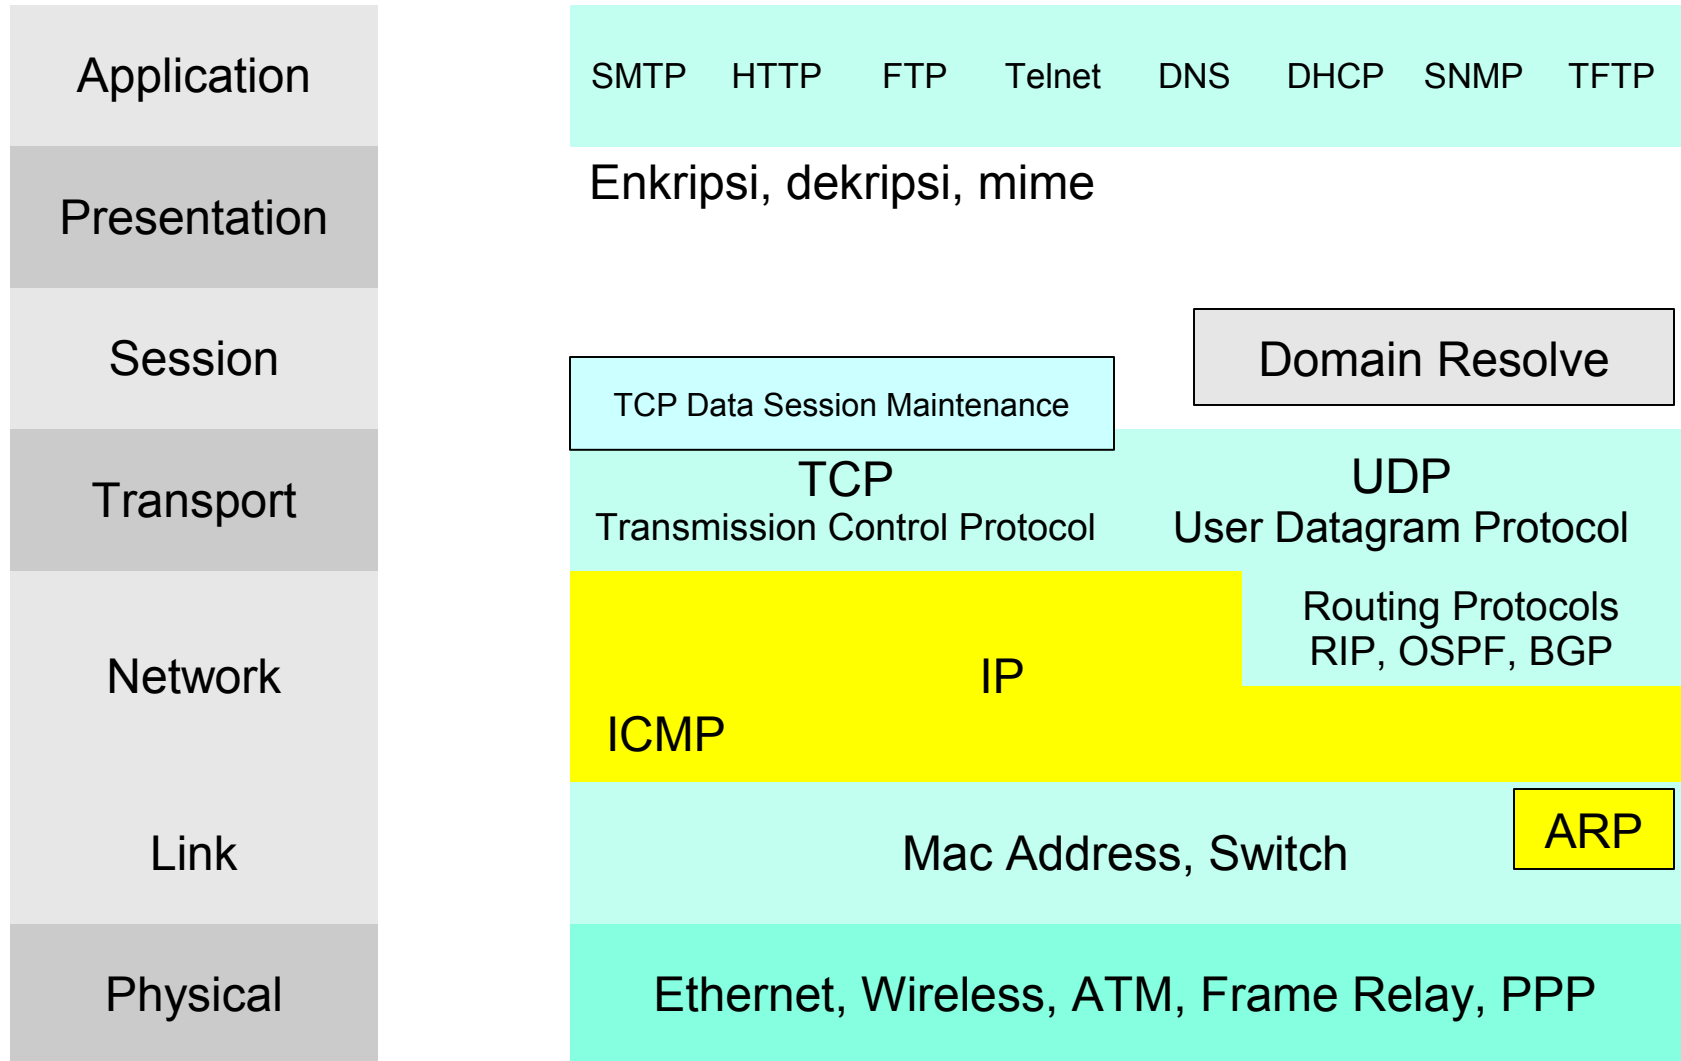

Jutaan host yang harus
bisa berkomunikasi
satu sama lain.

OSI Layer dan Protokol

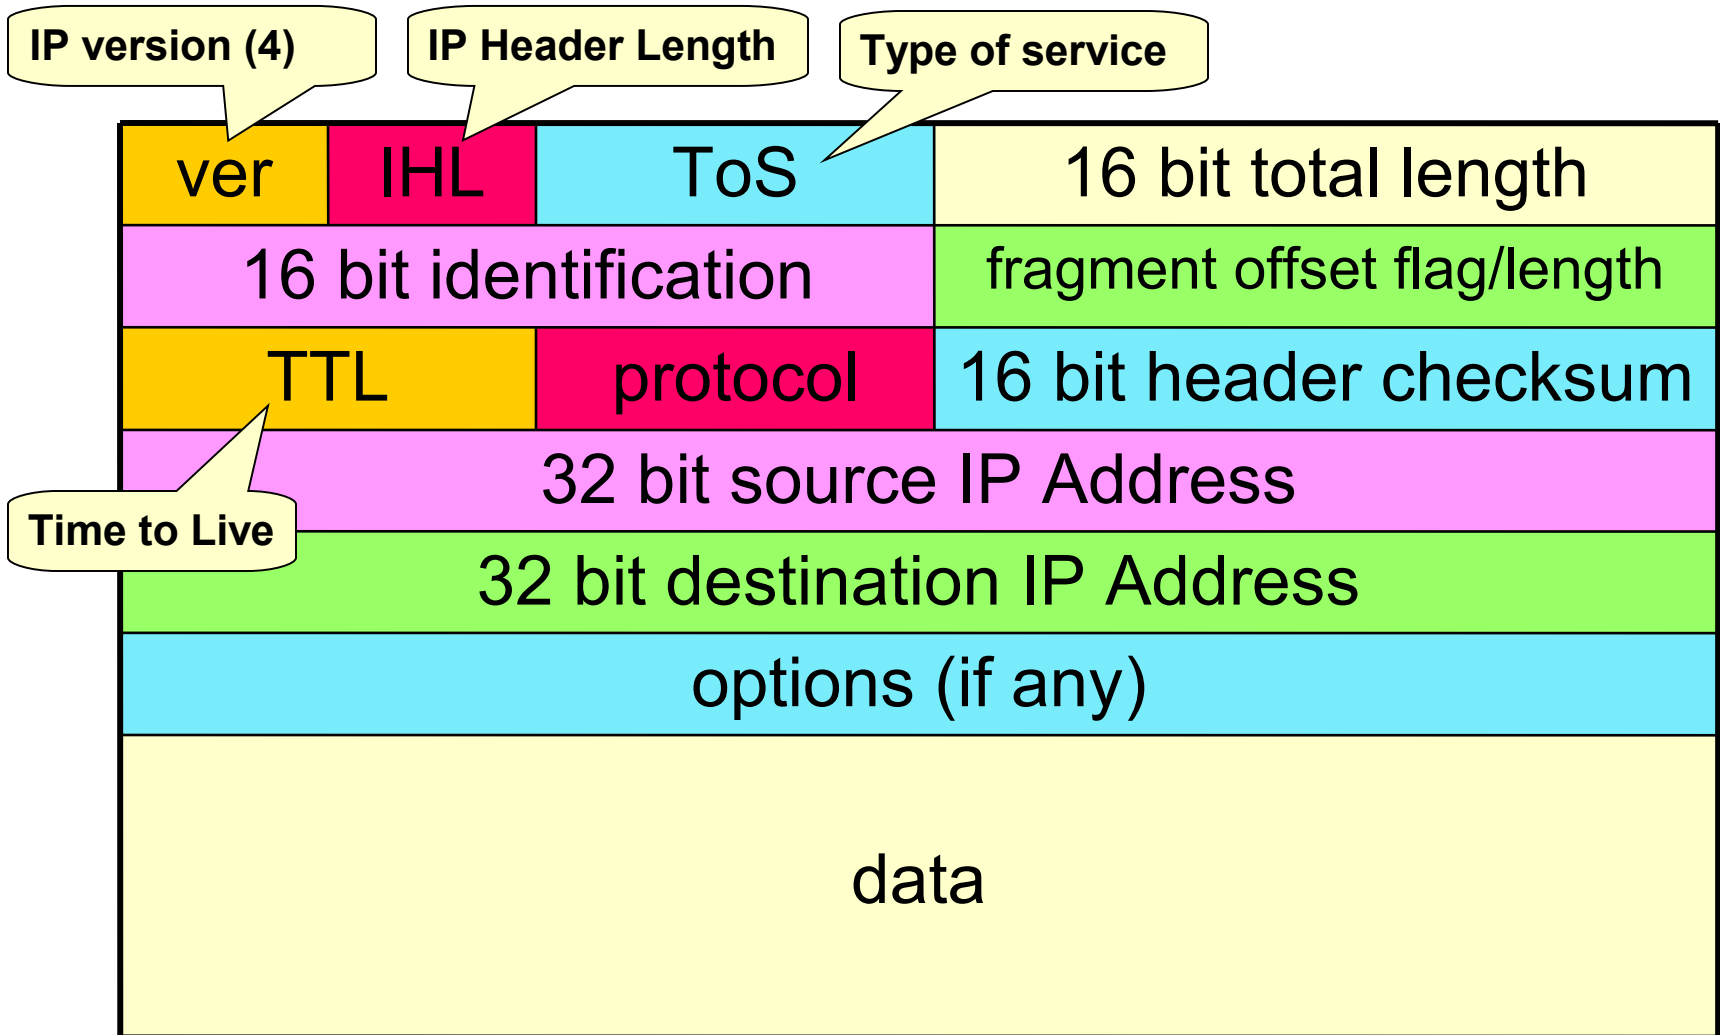

Open Systems Interconnection (OSI) adalah sebuah model referensi arsitektur antarmuka jaringan yang dikembangkan oleh ISO yang kemudian menjadi konsep standard komunikasi jaringan di hampir semua perangkat jaringan.

OSI Layer dan Protokol

Packet Header

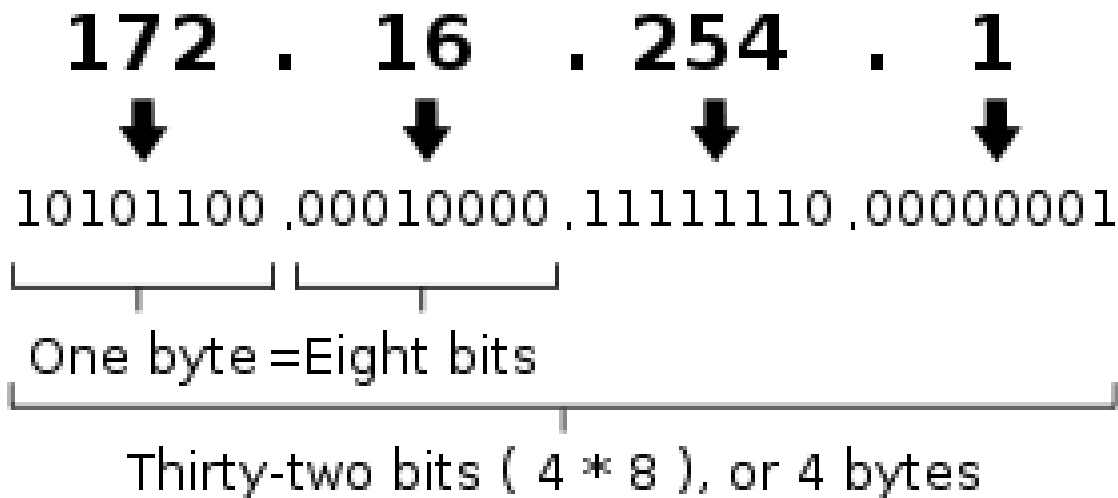

MAC Address

- MAC = Media Access Control
- Digunakan sebagai identitas yang unik dari setiap interface hardware, yang merupakan identitas untuk berkomunikasi di OSI layer 2.
- Sebagian bit merupakan identitas pabrik pembuat hardware
- 48 bit hex. Contoh: “**AA:BB:CC:DD:EE:FF**”
- Jika sebuah router memiliki 3 interface fisik, maka akan memiliki 3 buah mac address
- Untuk virtual interface (VLAN, EoIP) maka ditambahkan mac address virtual.

IP Address

- Adalah sistem pengalamatan setiap host yang terhubung ke jaringan
- Saat ini IP Address yang banyak digunakan adalah IP versi 4. (32 bits / 4 bytes) - 4,294,967,296 hosts

An IPv4 address (dotted-decimal notation)

Pengelompokan IP Address

- Pengelompokan IP Address dilakukan dengan subnet-ing.
- Subnet 0 – 32
 - Melambangkan jumlah IP dalam subnet tersebut dengan rumus $2^{(32-x)}$
 - Subnet 0 berarti semua IP Address
 - Subnet 32 berarti 1 IP Address

IP Subneting (contoh 1)

- Contoh: 192.168.0.0/24
 - Netmask : 255.255.255.0
 - Prefix : /24
 - IP Network : 192.168.0.0
 - First HostIP: 192.168.0.1
 - Last HostIP: 192.168.0.254
 - Broadcast : 192.168.0.255
 - HostIP : total IP di dalam Subnet (–) minus 2

IP Subneting (contoh 2)

- Contoh: 192.168.0.0/25
 - Netmask : 255.255.255.128
 - Prefix : /25
 - IP Network : 192.168.0.0
 - First HostIP: 192.168.0.1
 - Last HostIP: 192.168.0.126
 - Broadcast : 192.168.0.127
 - HostIP : total IP di dalam Subnet (–) minus 2

Tabel Subnet

Subnet Mask	Prefix	No of IP	Usable IP
255.255.255.0	/24	256	254
255.255.255.128	/25	128	126
255.255.255.192	/26	64	62
255.255.255.224	/27	32	30
255.255.255.240	/28	16	14
255.255.255.248	/29	8	6
255.255.255.252	/30	4	2
255.255.255.254	/31	2	-
255.255.255.255	/32	1	-

Quiz !

- Berikut ini adalah IP Address yang tidak boleh digunakan oleh host atau server yang berada pada internet network (public internet) :
 - a. 192.186.0.1
 - b. 172.31.76.76
 - c. 110.10.12.10
 - d. 10.100.123.45

- Seiring perjalanan data dari layer 1 ke layer 7 dalam 7 layer OSI, header dari paket data :
 - a. di-susun-ulang
 - b. di-modifikasi
 - c. di-tambah
 - d. di-hilangkan

Public and Private IP Address

○ **Public IP Address**

IP Address yang dapat diakses di jaringan internet.
Kita bisa mendapatkan Public IP Address dari:

- Dipinjami dari ISP
- Alokasi dari APNIC/IDNIC (www.idnic.net)

○ **Private IP Address**

IP Address yang diperuntukkan untuk jaringan lokal (tidak dapat diakses di jaringan internet)

- 10.0.0.0 – 10.255.255.255 (10./8)
- 172.16.0.0 – 172.31.255.255 (172.16./12)
- 192.168.0.0 – 192.168.255.255 (192.168./16)

IP Address Khusus Lainnya

Penggunaan	IP / subnet
Self Identification	0.0.0.0/8
Localhost	127.0.0.1
Not Used	Other 127.0.0.0/8
Multicast	224.0.0.0/4
Local link/DHCP error	169.245.0.0/16
TEST-NET-1	192.0.2.0/24
TEST-NET-2	198.51.100.0/24
TEST-NET-3	203.0.113.0/24
6to4 Relay Anycast	192.88.99.0/24
Benchmark Test	198.18.0.0/15
Future Used	240.0.0.0/4
Limited Broadcast	255.255.255.255/32

RFC5735 Jan 2010: <http://tools.ietf.org/html/rfc5735>

IP Protocol

- Adalah protokol standart yang digunakan untuk mengkomunikasikan data melalui berbagai jenis perangkat dan layer.
- Pengiriman data dilakukan dengan sistem “per paket” dan/atau “per connection”.
- Sistem ini menjamin keutuhan data, dan mencegah terjadinya kekurangan ataupun duplikasi data.
- Ada beragam protokol yang biasa digunakan, yang umum adalah TCP, UDP, dan ICMP.

ICMP (Internet Control Message Protocol)

- Disalurkan berbasis “best effort” sehingga bisa terjadi error (datagram lost)
- Banyak digunakan untuk pengecekan jaringan
- Prinsip kerja:
 - Host (router ataupun tujuan) akan mendeteksi apabila terjadi permasalahan tranmisi, dan membuat “ICMP message” yang akan dikirimkan ke host asal.
- Aplikasi ICMP yang paling banyak digunakan: Ping dan Traceroute

Type	Name
0	Echo Reply
1	Unassigned
2	Unassigned
3	Destination Unreachable
4	Source Quench
5	Redirect
6	Alternate Host Address
7	Unassigned
8	Echo
9	Router Advertisement
10	Router Solicitation
11	Time Exceeded

● ● ● | UDP (User Datagram Protocol)

- Komputer yang satu bisa mengirimkan pesan/datagram ke komputer lainnya di jaringan, tanpa terlebih dahulu melakukan “hand-shake” (connectionless communication)
- Biasanya digunakan untuk servis yang mengirimkan data kecil ke banyak host
- Tidak ada flow control ataupun mekanisme lain untuk menjaga keutuhan datagram
- Aplikasi yang paling umum menggunakan UDP adalah DNS dan berbagai game online

TCP (Transmission Control Protocol)

- Merupakan protokol yang paling banyak digunakan di internet.
- Bekerja dengan pengalamatan port
 - Port 1 – 1024 : low port (standard service port)
 - Port 1025...: high port (untuk transmisi lanjutan)
- Contoh aplikasi: http, email, ftp, dll
- Prinsip Kerja: Connection Oriented, Reliable Transmission, Error Detection, Flow Control, Segment Size Control, Congestion Control

Prinsip Kerja TCP

- Connection Oriented
 - Koneksi diawali dengan proses “handshake”
 - Client → SYN → Server
 - Server → SYN-ACK → Client
 - Client → ACK → Server
- Reliable Transmission
 - Mampu melakukan pengurutan paket data, setiap byte data ditandai dengan nomor yang unik
- Error Detection
 - Jika terjadi error, bisa dilakukan pengiriman ulang data

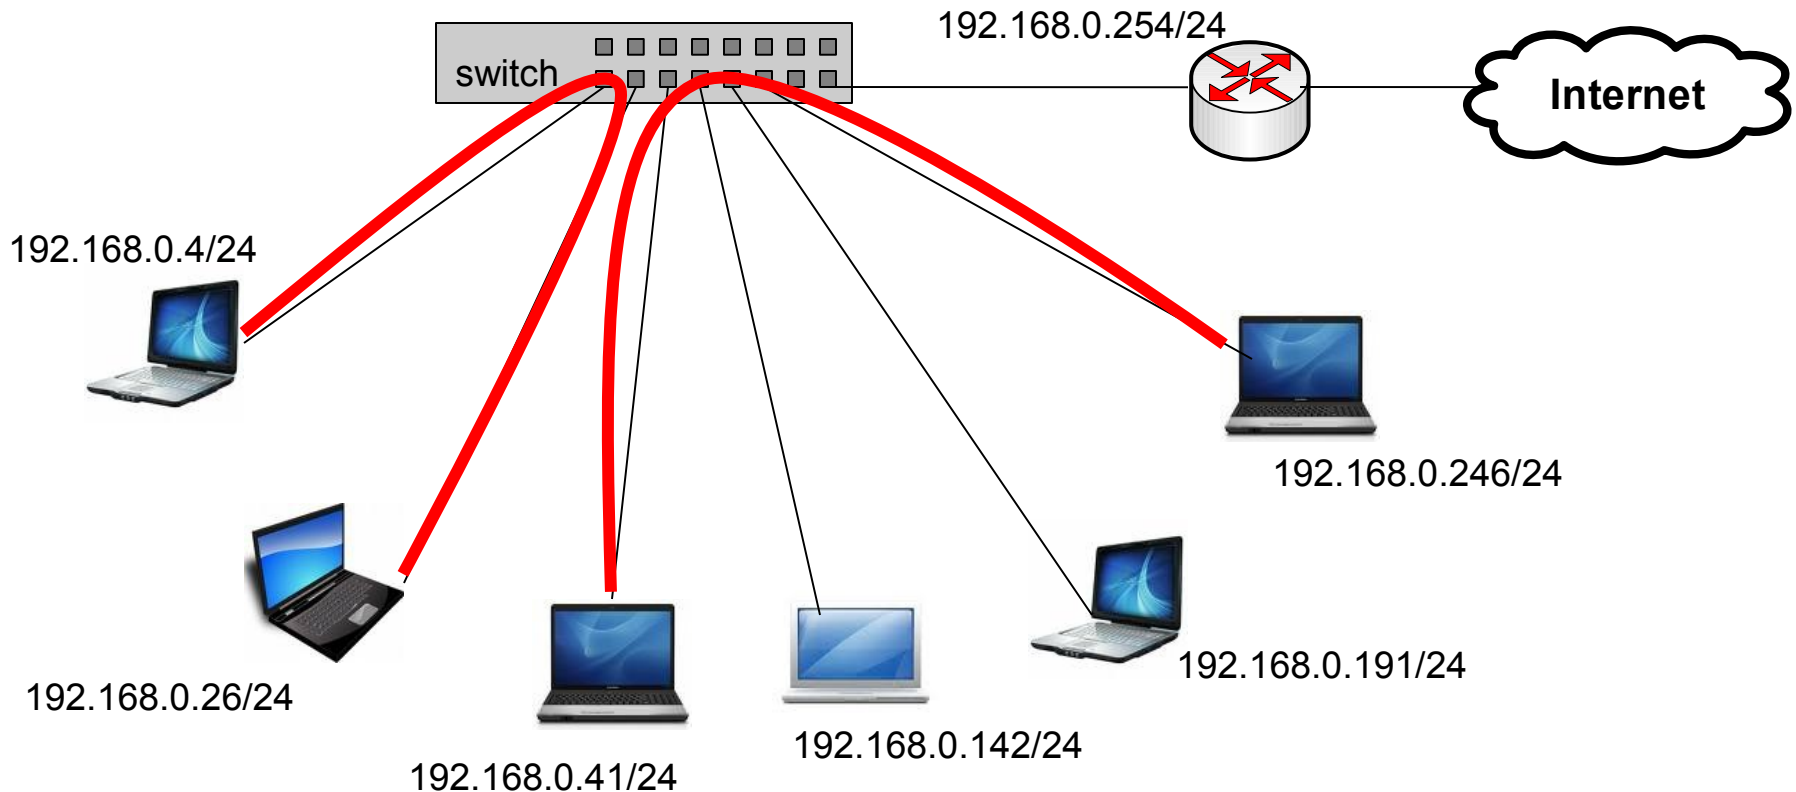

Prinsip Kerja TCP

- Flow Control
 - Mendeteksi supaya satu host tidak mengirimkan data ke host lainnya terlalu cepat
- Segment Size Control
 - Mendeteksi besaran MSS (maximum segment size) yang bisa dikirimkan supaya tidak terjadi IP fragmentation
- Congestion Control
 - TCP menggunakan beberapa mekanisme untuk mencegah terjadinya congestion pada network

Konsep Dasar Jaringan

- Host yang memiliki IP Address dari subnet yang sama bisa terkoneksi langsung, tanpa melalui router
 - From : **192.168.0.4** To : **192.168.0.26**

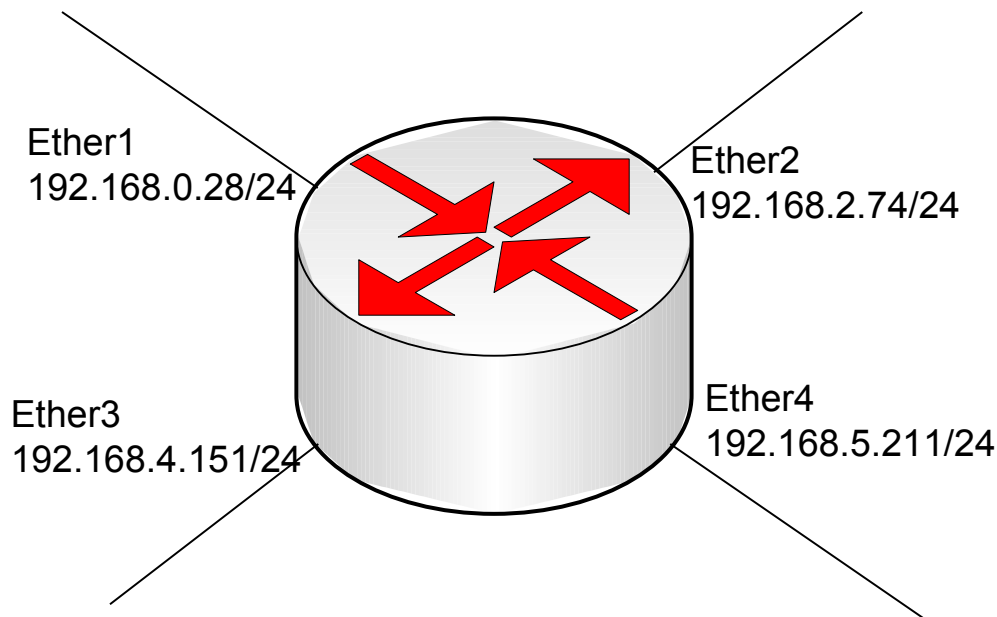

Konsep Dasar Jaringan

- Router bertugas untuk menghubungkan dua atau lebih jaringan yang memiliki subnet yang berbeda

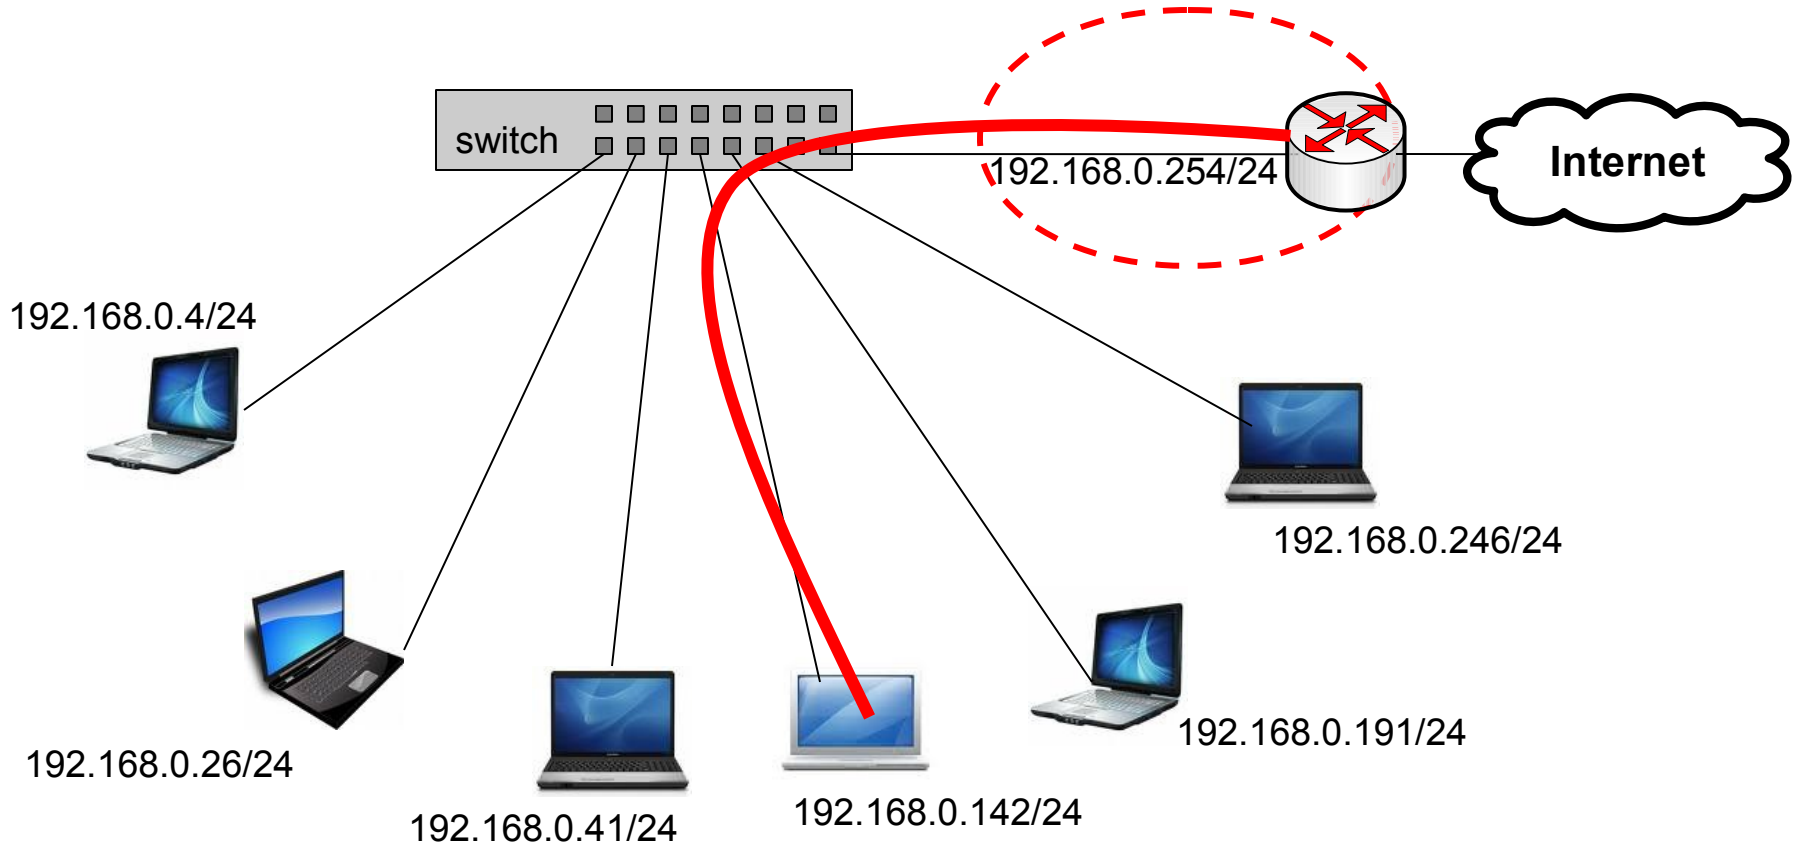

Konsep Dasar Jaringan

- Dua buah IP Address yang berasal dari subnet yang sama tidak boleh dipasang pada dua buah interface yang berbeda pada sebuah router

Konsep Dasar Jaringan

- **Default gateway** menentukan ke arah mana trafik harus disalurkan untuk menuju ke internet
 - From : **192.168.0.142** To : **222.24.112.34**

Konsep Dasar Jaringan

- DNS diperlukan untuk melakukan pengubahan nama domain menjadi ip address, karena seluruh proses pengaturan trafik dilakukan berdasarkan layer 3 OSI, yaitu ip address
- Contoh:
 - `www.yahoo.com` → `203.0.113.5`

Quiz !

- DNS diperlukan untuk terkoneksi ke internet ? (Benar / Salah) Kenapa ?
- Protocol email SMTP menggunakan protocol & port ?
- Protocol TCP memiliki beberapa fungsi berikut, kecuali!
 - Proper Sequencing of Packet
 - Flow Control Packet
 - Retransmission Packet
 - Addressing Packet

RouterOS Basic Configuration

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

Winbox - Download

- Download terlebih dahulu program **winbox.exe** untuk mengkonfigurasi RouterOS Mikrotik.

Mikrotik Utility

Winbox

Utility untuk melakukan remote GUI ke Router Mikrotik. For windows.

[winbox-2.2.13.exe](#) (34.5 KByte, didownload 376887 kali)

[winbox-2.2.11.exe](#) (34.5 KByte, didownload 76782 kali)

[winbox-2.2.10.exe](#) (34.5 KByte, didownload 60046 kali)

[winbox-2.2.15.exe](#) (36.5 KByte, didownload 239230 kali)

[winbox-2.2.18.exe](#) (111.5 KByte, didownload 36747 kali)

Basic Config - Topology

IP Configuration

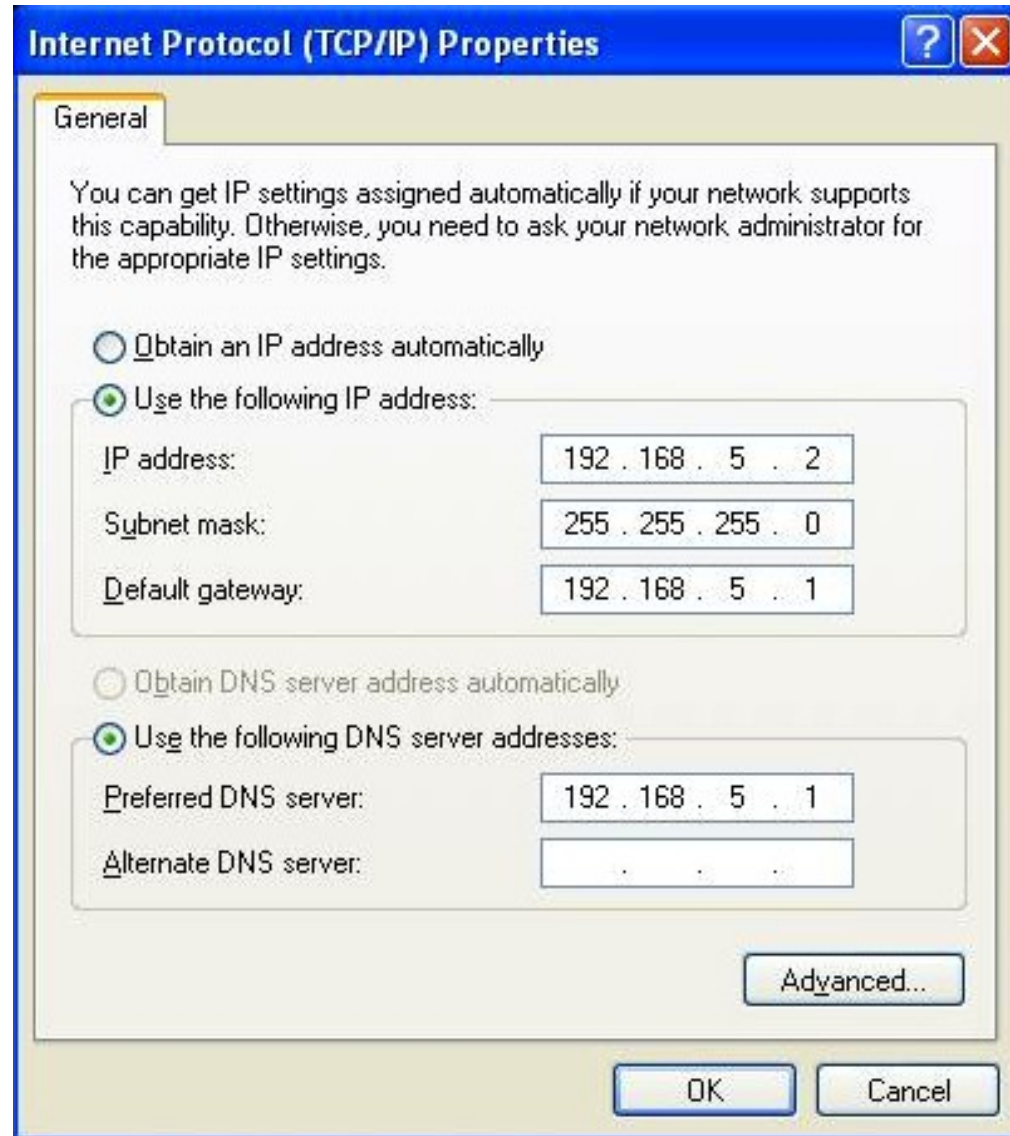

Lab-1 adalah sebuah simulasi konfigurasi dasar sebuah Router Mikrotik yang akan digunakan di jaringan local seperti **Warnet**, **Office**, **Kampus** atau bahkan di **RT/RW-NET**

X = nomor peserta

- Routerboard Setting
 - WAN IP : 10.10.10.x/24
 - Gateway : 10.10.10.100
 - LAN IP : 192.168.x.1/24
 - DNS : 10.100.100.1
 - Src-NAT and DNS Server
- Laptop Setting
 - IP Address : 192.168.x.2/24
 - Gateway : 192.168.x.1
 - DNS : 192.168.x.1

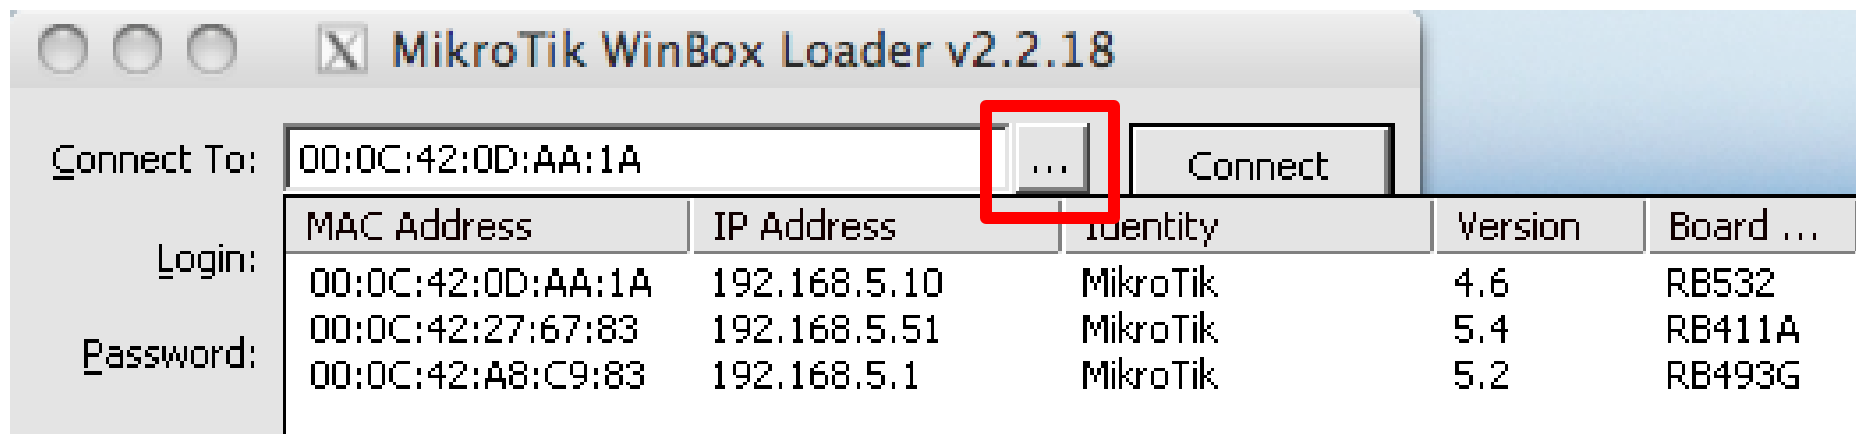

Laptop Config

- Konfigurasi ip-address statik pada laptop.

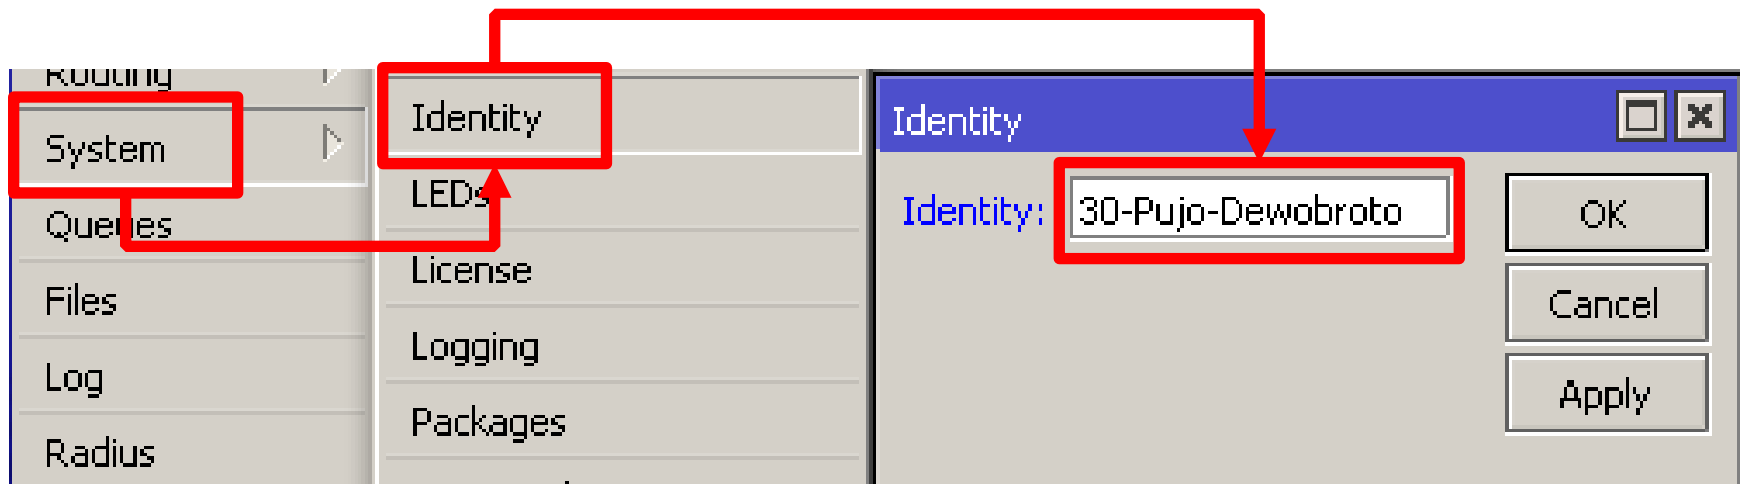

First Setup

- Hubungkan port ethernet Laptop Anda dengan **ether1** pada Routerboard.
- Pastikan ethernet port di laptop Anda memiliki IP statik
- Jalankan program winbox.exe, klik pada tombol [...] untuk melihat router Anda.

[LAB-1] System Identity

- Supaya tidak membingungkan, ubahlah nama router Anda.
- Format: **xx>NamaAnda**
- Contoh: 30-Pujo-Dewobroto

[LAB-2] Wireless Config

The image shows the Mikrotik WinBox interface for configuring a wireless interface. On the left, the 'Interfaces' sidebar has 'Wireless' selected. The main window shows the 'Wireless Tables' section with a table containing one entry: 'wlan1' of type 'Wireless (Atheros 11N)'. Below this, the 'Interface <wlan1>' configuration window is open, showing the 'Wireless' tab. The 'Mode' is set to 'station', 'Band' is '5GHz-A', 'Channel Width' is '20MHz', 'Frequency' is '5180 MHz', and 'SSID' is 'training'. The 'Enable' button is highlighted with a red box. A yellow callout box contains the text: 'Aktifkan Interface Wireless – **Wlan1**'.

[LAB-4] Gateway Config

The screenshot illustrates the configuration of a gateway in Mikrotik WinBox. On the left, the 'IP' menu is selected, and the 'Routes' option is highlighted. A red arrow points from this option to a '+' button in the 'Route List' window. Below the 'Route List', the 'New Route' window is open, showing the 'Gateway' field set to '10.10.10.100'. The 'Dst. Address' field is set to '0.0.0.0/0'. The 'Route List' table shows two existing routes:

Routes	Nexthops	Rules	VRF
DAC	▶ 10.10.10.0/24		wlan1 reachable
DAC	▶ 192.168.30.0...		ether1 reachable

[LAB-5] DNS Config

The image illustrates the configuration of DNS in Mikrotik WinBox. On the left, a menu path is shown: **Mesh** > **IP** > **DHCP Server** > **DNS**. The main window shows the **DNS** configuration interface with the **Static** tab selected. A table with columns **#**, **Name**, **Address**, and **TTL (s)** is visible. The **Settings** button is highlighted, leading to the **DNS Settings** dialog box. In this dialog, the **Servers** field is set to **10.100.100.1**, and the **Allow Remote Requests** checkbox is checked. Other fields include **Max UDP Packet Size: 512**, **Cache Size: 2048 KIB**, and **Cache Used: 8**. Buttons for **OK**, **Cancel**, and **Apply** are also present.

[LAB-6] Src-NAT Config

The image shows the configuration steps for a Source NAT rule in Mikrotik WinBox:

- IP** menu
- Firewall** menu
- NAT** sub-menu
- +** (Add) button
- New NAT Rule** dialog box:
 - Chain:** srcnat
 - Out. Interface:** wlan1
 - Action:** masquerade

Terminal / Console Config

- Konfigurasi identity router
 - */system identity set name="xx-nama-anda"*
- Konfigurasi wireless sebagai media untuk backbone
 - */interface wireless set wlan1 mode=station ssid=training band=5ghz-a disabled=no*
- Konfigurasi IP Address
 - */ip address add address=10.10.10.x/24 interface=wlan1*
 - */ip address add address=192.168.x.1/24 interface=ether1*
- Konfigurasi Routing – Default Gateway
 - */ip route add gateway=10.10.10.100*
- Konfigurasi DNS
 - */ip dns set servers=10.100.100.1 allow-remote-request=yes*
- Konfigurasi NAT
 - */ip firewall nat add chain=srcnat out-interface=wlan1 action=masquerade*

Installation Debug

- Test ping dari **Router** ke **Gateway** (10.10.10.100)
 - Jika error : Cek Wireless connection, Cek IP Address pada wlan1
- Test ping dari **Router** ke **Internet** (contoh: yahoo.com)
 - Jika error : Cek DNS Server Setting
- Test ping dari **Laptop** ke **Router** Anda (10.10.10.x)
 - Jika error : Cek konfigurasi laptop, Cek IP Address pada Ether1
- Test ping dari **Laptop** ke **Gateway** (10.10.10.100)
 - Jika error : Cek Firewall - NAT
- Test ping dari **Laptop** ke **Internet** (contoh: yahoo.com)
 - Jika error : Cek setting DNS pada laptop dan router

Network Time Protocol (NTP)

- NTP protocol memungkinkan sinkronisasi waktu dalam sebuah jaringan
- Mikrotik support sebagai NTP server dan sebagai NTP Client
- NTP Server
 - Install paket **ntp-xxxx-(versi).npk**, karena paket 'system' hanya menyertakan servis ntp client
 - Mode: **broadcast,manycast,multicast**
- NTP Client sudah builtin dalam package system

[LAB-7] NTP

SNTP Client

Enabled

Mode: unicast

Backup from CLI

- Jika ingin menentukan nama file backup, bisa melakukan backup melalui new terminal

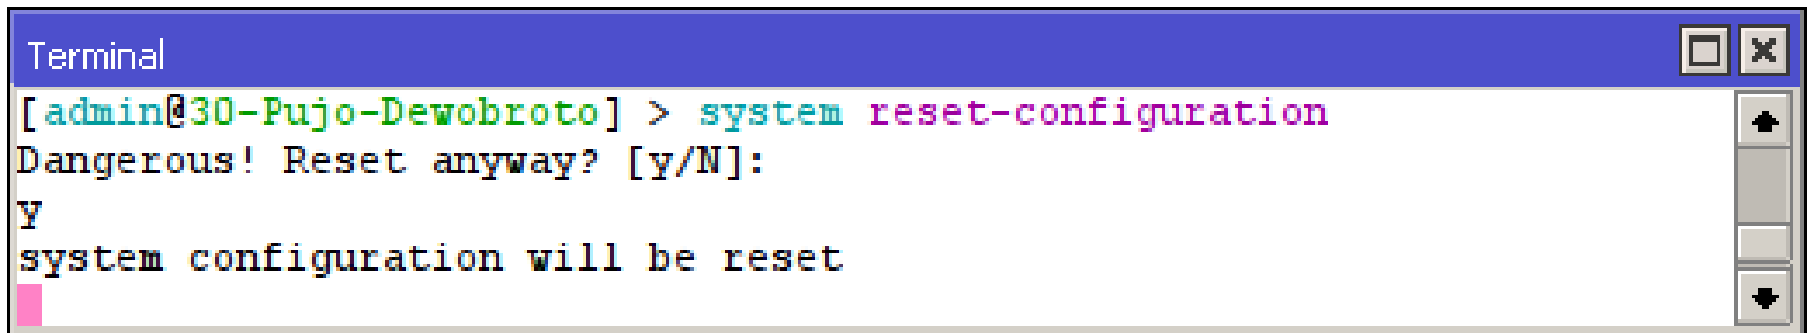

```
Terminal
[admin@30-Pujo-Dewobroto] > sys backup save name=Backup-Router-30
Saving system configuration
Configuration backup saved
[admin@30-Pujo-Dewobroto] >
```

- File hasil backup dapat dilihat di menu file dan didownload via FTP
- File backup tidak dapat di-edit !

System Reset

- Untuk mengembalikan ke konfigurasi awal (default).
- Perintah ini menghapus semua konfigurasi yang telah dibuat, termasuk user dan password.
- Hanya bisa dilakukan oleh user dengan hak penuh (grup: full)

A screenshot of a terminal window titled "Terminal". The prompt is "[admin@30-Pujo-Dewobroto] >". The user has entered the command "system reset-configuration". The terminal displays the warning "Dangerous! Reset anyway? [y/N]:" and the user has responded with "Y". The final output is "system configuration will be reset".

```
Terminal
[admin@30-Pujo-Dewobroto] > system reset-configuration
Dangerous! Reset anyway? [y/N]:
Y
system configuration will be reset
```

[LAB-9] Restore Configuration

The screenshot shows the Mikrotik WinBox interface. In the top-left sidebar, the 'Files' menu is highlighted with a red box. In the main 'File List' window, the 'Restore' button is highlighted with a red box. A red arrow points from the 'Files' menu to the 'Backup-Router-30.backup' file in the list. Another red arrow points from the 'Restore' button to the 'Restore' dialog box. The dialog box contains the text 'Do you want to restore configuration and reboot?' and has 'Yes' and 'No' buttons. The 'Yes' button is highlighted with a red box. Below the dialog box, a terminal window shows the command: `[admin@MikroTik] > system backup load name=Backup-Router-30.backup`

File Name	Type	Size	Creation Time
Backup-Router-30.backup	backup	23.6 KiB	Dec/13/2012 06:57:54

skins			Jan/01/1970 00:00:58
usb1			Jan/02/1970 00:00:29

Backup – Export Configuration

- Backup bisa dilakukan juga menggunakan perintah export.

```
[admin@MikroTik] > /ip route export
# jun/30/2011 10:16:16 by RouterOS 4.6
# software id = DKIN-USDN
#
/ip route
add comment="" disabled=no distance=1 dst-address=0.0.0.0/0 \
    gateway=192.168.5.1 pref-src=192.168.5.201 scope=30 \
    target-scope=10
[admin@MikroTik] >
```

Backup – Export to File

- Hasil export ini berupa script (text base configuration) yang bisa dilihat dan diedit menggunakan text editor.

```
[admin@MikroTik] > /ip route export file=route.rsc  
[admin@MikroTik] >
```

File List			
File Name	Type	Size	
DKIN-USDM.key	.key file	204 B

```

MikroTik RouterOS 4.6 (c) 1999-2010

<http://www.mikrotik.com/>

```
[admin@MikroTik] > import route.rsc
Opening script file route.rsc

Script file loaded and executed successfully
[admin@MikroTik] >
```

DHCP Server

- Dynamic Host Configuration Protocol digunakan untuk secara dinamik mendistribusikan konfigurasi jaringan, seperti:
 - IP Address dan netmask
 - IP Address default gateway
 - Konfigurasi DNS dan NTP Server
 - Dan masih banyak lagi custom option (tergantung apakah DHCP client bisa support)

[LAB-10] DHCP Server (1)

The image shows the Mikrotik WinBox interface for configuring a DHCP Server. The navigation path is highlighted with red boxes and arrows:

- In the main menu, the **IP** option is selected.
- In the sub-menu, the **DHCP Server** option is selected.
- In the DHCP Server window, the **DHCP Setup** button is selected.

The DHCP Server window displays the following tabs: DHCP, Networks, Leases, Options, Alerts. Below the tabs are icons for adding (+), removing (-), checking (✓), unchecking (✗), and filtering (funnel), along with a search field labeled "Find".

Name	Interface	Relay	Lease Time
0 items			

[LAB-10] DHCP Server (2)

DHCP Setup

Select interface to run DHCP server on

DHCP Server Interface: ether1

DHCP Setup

Select network for DHCP addresses

DHCP Address Space: 192.168.30.0/24

Back Next Cancel

DHCP Setup

Select gateway for given network

Gateway for DHCP Network: 192.168.30.1

Back Next Cancel

[LAB-10] DHCP Server (3)

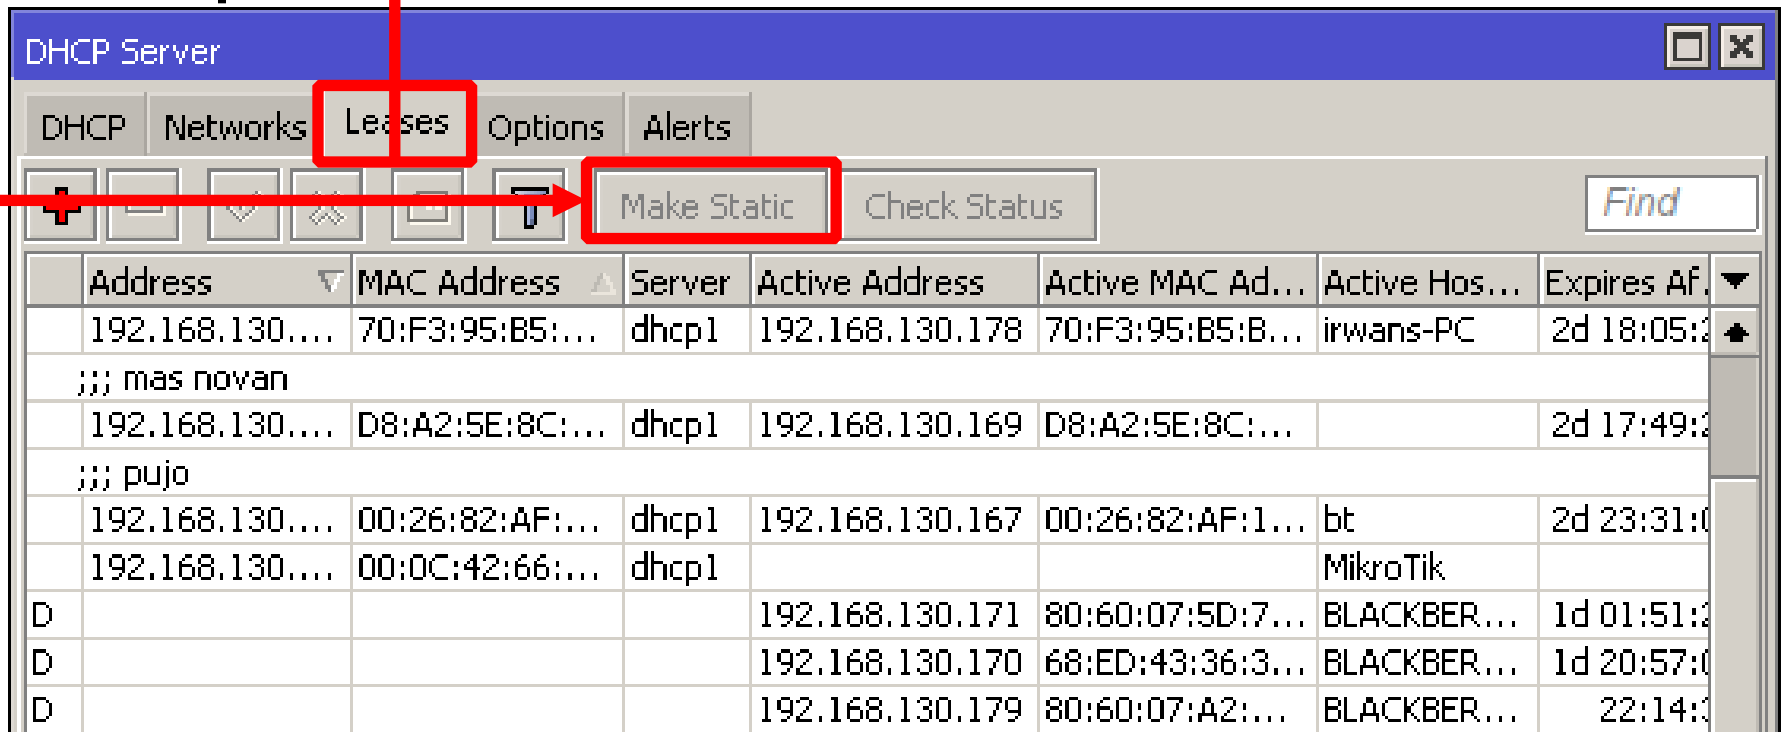

Terminal – DHCP Server Wizard

- Konfigurasi DHCP-Server setup
 - /ip dhcp-server setup
 - dhcp server interface: ether1
 - dhcp address space: 192.168.x.0/24
 - gateway for dhcp network: 192.168.x.1
 - dhcp relay: none
 - addresses to give out: 192.168.x.10-192.168.x.20
 - dns servers: 192.168.x.1
 - lease time: 3d

DHCP Test

- Ubahlah konfigurasi IP Address dan DNS pada laptop menjadi otomatis
- Cek pada laptop apakah sudah mendapatkan alokasi IP Address dari DHCP
 - **C:\ ipconfig [enter]**
- Cobalah melakukan koneksi internet

DHCP Management

DHCP Client

- Dalam kondisi tertentu, IP Address yang diberikan oleh ISP yang akan dipasang pada router bukanlah IP Address statik, melainkan IP Address dinamis yang didapatkan melalui DHCP.
- Dalam kasus ini, kita bisa menggunakan fitur DHCP-Client.

[LAB-11] DHCP Client

The image shows the Mikrotik WinBox DHCP Client configuration window for interface wlan1. The window is titled "DHCP Client <wlan1>" and has tabs for "Interface", "DHCP", "Status", and "V6 Status". The "DHCP" tab is active. The configuration includes:

- Interface: wlan1 (highlighted with a red box)
- IPv4
- Hostname: [empty field]
- Client ID: [empty field]
- Use Peer DNS
- Use Peer NTP
- Add Default Route
- Default Route Distance: 0
- IPv6 PD
- Pool Name: [empty field]
- Pool Prefix Length: 0

Buttons on the right include OK, Cancel, Apply, Disable, Copy, Remove, Release, and Renew. At the bottom, the status is shown as "enabled", "V4 Status: bound", and "V6 Status: stopped".

Red annotations include:

- A red box around the "+" button in the top-left corner of the DHCP Client window.
- A red box around the "Interface: wlan1" dropdown menu.
- A red box around the "DHCP Client" option in the left sidebar.
- Red arrows pointing from the sidebar to the "DHCP Client" window and from the "+" button to the "Interface" dropdown.

DHCP Client (1)

- **Interface**
 - Pilihlah interface yang sesuai yang terkoneksi ke DHCP Server
- **Host name** (*tidak harus diisi*)
 - Nama DHCP client yang akan dikenali oleh DHCP Server
- **Client ID** (*tidak harus diisi*)
 - Biasanya merupakan mac-address interface yang kita gunakan, apabila proses DHCP di server menggunakan sistem radius

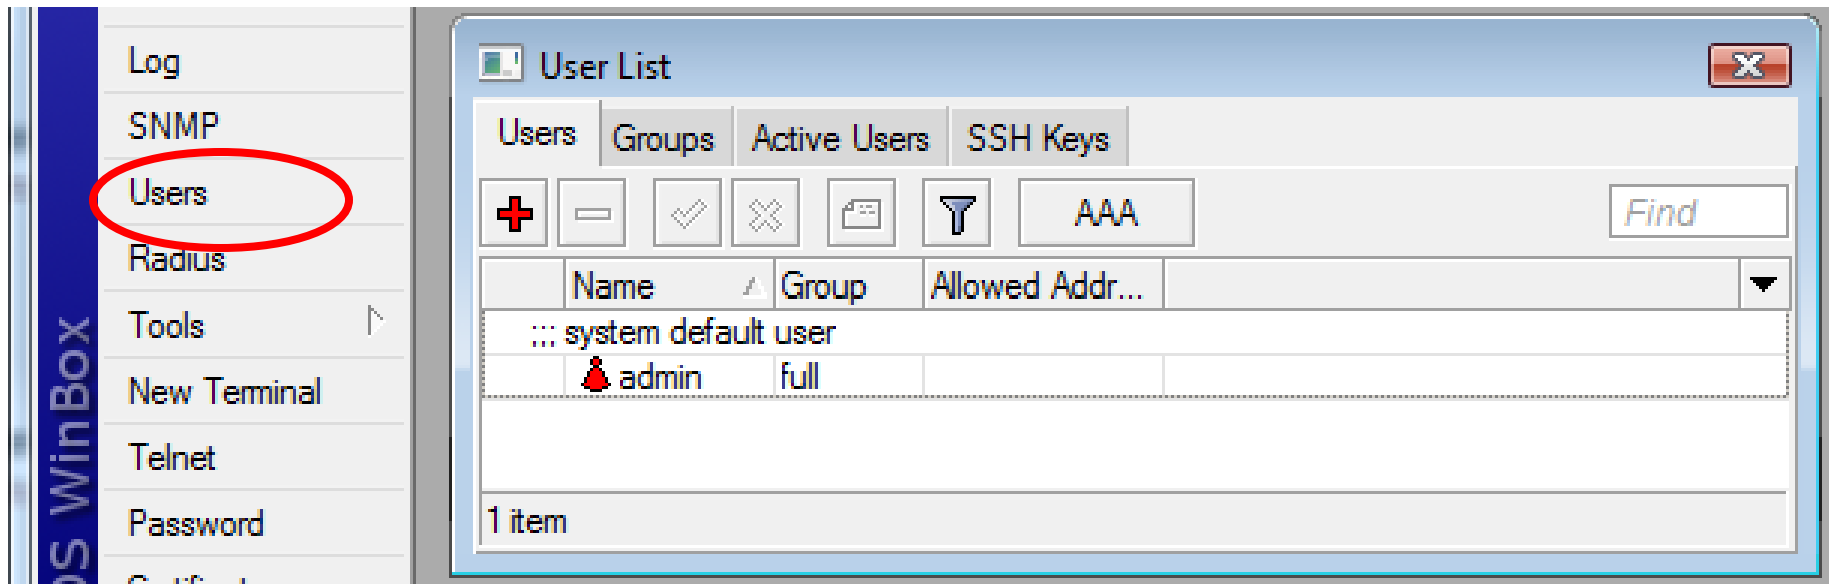

DHCP Client (2)

- **Add default route**
 - Bila kita menginginkan default route kita mengarah sesuai dengan informasi DHCP
- **Use Peer DNS**
 - Bila kita hendak menggunakan DNS server sesuai dengan informasi DHCP
- **Use Peer NTP**
 - Bila kita hendak menggunakan informasi pengaturan waktu di router (NTP) sesuai dengan informasi dari DHCP
- **Default route distance**
 - Menentukan prioritas routing jika terdapat lebih dari satu DHCP Server yang digunakan. Routing akan melalui distance yang lebih kecil

Internal User RouterOS

- Secara default, akan ada user admin dengan password [kosong]

The screenshot shows the Mikrotik WinBox interface. On the left, the 'Users' menu item is circled in red. On the right, the 'User List' window is open, displaying a table of users. The table has columns for Name, Group, and Allowed Addr... The only user listed is 'admin' with the group 'full'. The status bar at the bottom of the window indicates '1 item'.

Name	Group	Allowed Addr...
admin	full

Internal User Groups

- User dapat dikategorikan hak nya berdasarkan grup yang kita tentukan

The image shows two windows from the Mikrotik WinBox interface. The 'User List' window on the left has tabs for 'Users', 'Groups', 'SSH Keys', 'SSH Private Keys', and 'Active L...'. The 'Groups' tab is selected, and a red box highlights the '+' button in the toolbar. The 'New Group' dialog box is open on the right, with a red box around it. The dialog has a title bar 'New Group' and a close button. The 'Name' field contains 'groupku'. Below it is a section titled '- Policies' with a list of checkboxes: local, ssh, reboot, write, test, password, sniff, api, telnet, ftp, read, policy, winbox, web, and sensitive. At the bottom, there is a 'Skin' dropdown menu set to 'default' and a 'System' label.

Name	Policies
S full	local telnet ssh ftp reboot read write
S read	local telnet ssh reboot read test win
S write	local telnet ssh reboot read write te

About User

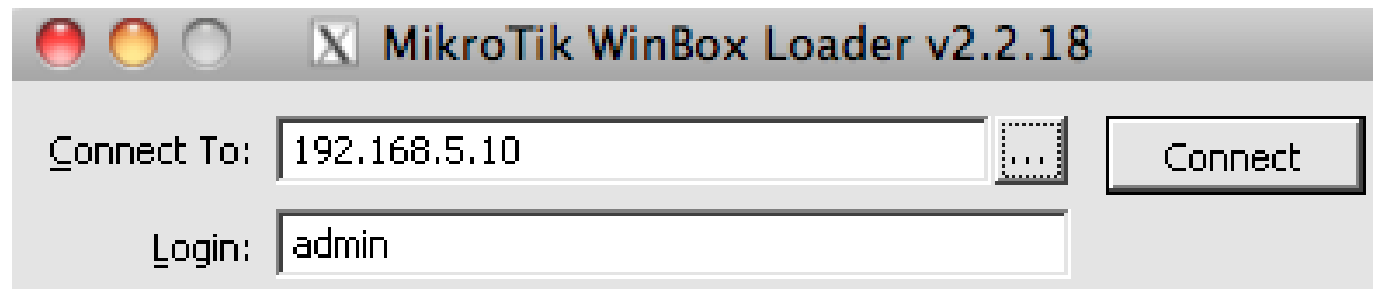

- Buatlah user baru yang memiliki hak penuh dan non aktifkan user “**admin**”
- Untuk teknisi bisa diberikan grup **write** (bukan **full**) sehingga kita masih memiliki hak penuh terhadap router kita
- Untuk pemantauan, bisa menggunakan user dengan grup **read**

● ● ● | [LAB-12] Internal User

- Buat user tambahan untuk rekan semeja anda
- Buat grup beserta hak yang dimiliki
- Tentukan juga address yang diijinkan untuk mengakses router

Access to Router (IP Base)

- IP-Winbox
- Telnet
- SSH
- WebFig

```
Novan-Chriss-MacBook-Pro:~ novan$ telnet 192.168.5.10
Trying 192.168.5.10...
Connected to 192.168.5.10.
Escape character is '^]'.
Password: █
```

Access to Router - WebFig

- Konfigurasi realtime berbasis Web memungkinkan konfigurasi mikrotik menggunakan perangkat mobile
- Webfig bisa diakses dengan memasukkan IP router didalam address bar browser

The image shows the Mikrotik RouterOS v5.8 WebFig interface. At the top, the Mikrotik logo is displayed. Below it, the text reads "RouterOS v5.8" and "You have connected to a router. Administrative access only. If this device is not in your possession, please contact your local network administrator." Underneath, there is a "Select action:" section with several icons: Winbox, Webfig, Telnet, Graphs, License, and Help. The Webfig icon is highlighted with a red box. To the right, a "RouterOS WebFig Login" form is shown, also highlighted with a red box. It contains fields for "Login:" and "Password:", and a "Login" button. A red arrow points from the Webfig icon to the login form.

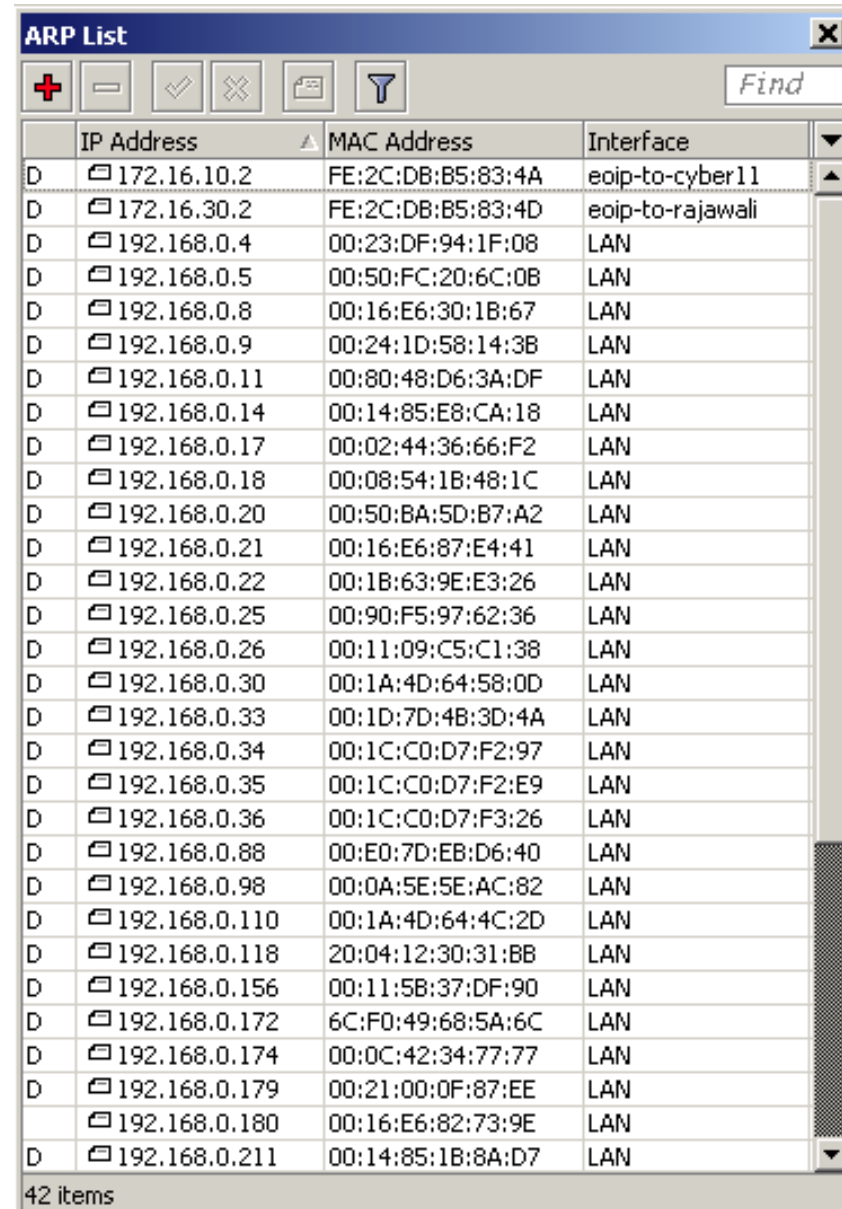

Access to Router - WebFig

The screenshot shows the Mikrotik WebFig interface for a router. The browser address bar displays `192.168.30.1/webfig/`. The left sidebar contains a navigation menu with categories like Interfaces, Wireless, Switch, Bridge, PPP, Mesh, IP, MPLS, Routing, System, Queues, New Terminal, Log, Radius, Files, Tools, MetaROUTER, and Make Supout.rif. The main content area shows the 'Interface List' with a table of 5 items. The table columns are Name, Type, L2 MTU, Tx, Rx, and Tx Pac (p/). The interface list includes ether1, ether2, ether3, wlan1, and wlan2.

		Name	Type	L2 MTU	Tx	Rx	Tx Pac (p/)
D	R	ether1	Ethernet	1526	3.4 Mbps	99.4 kbps	279
D		ether2	Ethernet	1522	0 bps	0 bps	0
D		ether3	Ethernet	1522	0 bps	0 bps	0
D	R	wlan1	Wireless(Atheros 11N	2290	91.9 kbps	3.3 Mbps	159
E	X	wlan2	Wireless(Atheros 11N		0 bps	0 bps	0

ARP Table

- Merupakan protokol penghubung antara layer 2 **data-link** dan 3 **network**.
- ARP Table di router merupakan daftar **host yang terhubung langsung** berisi informasi pasangan **mac address** dan **ip address**.
- Di **IPv6** arp digantikan dengan **NDP** (Network Discovery Protocol).

The screenshot shows the 'ARP List' window in Mikrotik WinBox. It displays a table with 42 items, showing the mapping between IP addresses and MAC addresses for various interfaces. The table has three columns: IP Address, MAC Address, and Interface. The IP addresses range from 172.16.10.2 to 192.168.0.211. The MAC addresses are in hexadecimal format. The interfaces include 'eoip-to-cyber11', 'eoip-to-rajawali', and 'LAN'.

	IP Address	MAC Address	Interface
D	172.16.10.2	FE:2C:DB:B5:83:4A	eoip-to-cyber11
D	172.16.30.2	FE:2C:DB:B5:83:4D	eoip-to-rajawali
D	192.168.0.4	00:23:DF:94:1F:08	LAN

16 items

ARP Protocol

- ARP protocol secara “default” aktif di setiap interface.
- ARP = Enabled – menandakan Interface akan mengupdate tabel ARP secara otomatis

The screenshot shows the configuration page for the 'ether1' interface in Mikrotik WinBox. The 'General' tab is selected. The 'Name' field is 'ether1', 'Type' is 'Ethernet', 'MTU' is '1500', 'L2 MTU' is '1598', 'Max L2 MTU' is '4074', and 'MAC Address' is 'D4:CA:6D:29:4C:28'. The 'ARP' field is set to 'enabled' and is highlighted with a red rectangle.

General	Ethernet	Status	Overall Stats	...
Name:	ether1			
Type:	Ethernet			
MTU:	1500			
L2 MTU:	1598			
Max L2 MTU:	4074			
MAC Address:	D4:CA:6D:29:4C:28			
ARP:	enabled			

ARP – Security !

- ARP = Reply-only – menandakan ARP protocol pada interface tidak mengupdate data di ARP table secara otomatis.

The screenshot displays two windows from Mikrotik WinBox. The 'ARP List' window shows a table of IP and MAC addresses. A red box highlights the '+' icon in the toolbar. Below it, the 'New ARP' form is filled with IP Address: 192.168.123.4, MAC Address: AA:BB:CC:DD:EE:FF, and Interface: ether1. The 'Interface <ether1>' window shows configuration for the ether1 interface. A red box highlights the 'ARP' dropdown menu, which is set to 'reply-only'.

	IP Address	MAC Address	Int

Monitoring - Ping

- Tool monitoring

- Ping

- Ping uses Internet Control Message Protocol (ICMP) Echo messages to determine if a remote host is active or inactive and to determine the round-trip delay when communicating with it.

```
[user1@MKI] > ping 192.168.0.100
```

```
192.168.0.100 64 byte ping: ttl=64 time=1 ms
```

```
192.168.0.100 64 byte ping: ttl=64 time=1 ms
```

```
192.168.0.100 64 byte ping: ttl=64 time=1 ms
```

```
3 packets transmitted, 3 packets received, 0% packet loss
```

```
round-trip min/avg/max = 1/1.0/1 ms
```

Monitoring – Ping Flood

Monitoring - Traceroute

- Traceroute
 - Traceroute determines how packets are being routed to a particular host
 - We can choose the protocol : ICMP or UDP

The screenshot shows the Traceroute utility window with the following configuration:

- Traceroute To:
- Packet Size:
- Timeout: s
- Protocol:
- Port:
- Src. Address:
- DSCP:

Buttons: Traceroute, Stop, Close

#	Host	Time 1	Time 2	Time 3
0	192.168.0.100	2ms	2ms	1ms
1	202.65.113.1	2ms	1ms	2ms
2	10.10.89.5	2ms	2ms	2ms
3	202.65.113.16	2ms	2ms	2ms

Monitoring – CPU Load

- Tool – Profile untuk monitoring CPU Load

The screenshot shows a window titled "Profile (Running)" with a table of CPU usage. The table has two columns: "Name" and "Usage". The "Usage" column contains numerical values and a blue progress bar for each process. The processes listed are dns, ethernet, firewall, idle, management, queuing, unclassified, and winbox. The "idle" process has the highest usage at 98.0%.

Name	Usage
dns	1.0
ethernet	0.5
firewall	0.0
idle	98.0
management	0.0
queuing	0.5
unclassified	0.0
winbox	0.0

Bridge, Switch & EoIP

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

● ● ● | Bridge - Concept

- Menggabungkan 2 atau lebih interface yang bertipe ethernet, atau sejenisnya, seolah-olah berada dalam 1 segmen network yang sama.
- Proses penggabungan ini terjadi pada layer data link.
- Mengaktifkan bridge pada 2 buah interface akan menonaktifkan fungsi routing di antara kedua interface tersebut.
- Mengemulasi mode **switch** secara software pada dua atau lebih interface.

System Bridge - Example

- Memanfaatkan port-port pada Routerboard untuk menghubungkan Perangkat-perangkat jaringan **supaya berada dalam satu subnet / bridge network yang sama layaknya seperti Switch.**

Bridge – Topology for Wireless

- Bayangkan kalau network wireless sudah terdiri dari beberapa BTS

System Bridge

- Konsekuensi penggunaan Sistem Bridge
 - Sulit untuk mengatur trafik broadcast (misalnya akibat virus, dll)
 - Permasalahan pada satu segment akan membuat masalah di semua segment pada bridge yang sama
 - Sulit untuk membuat fail over system
 - Sulit untuk melihat kualitas link pada tiap segment
 - Beban trafik pada setiap perangkat yang dilalui akan berat, karena terjadi akumulasi traffic

Interface for Bridge Port

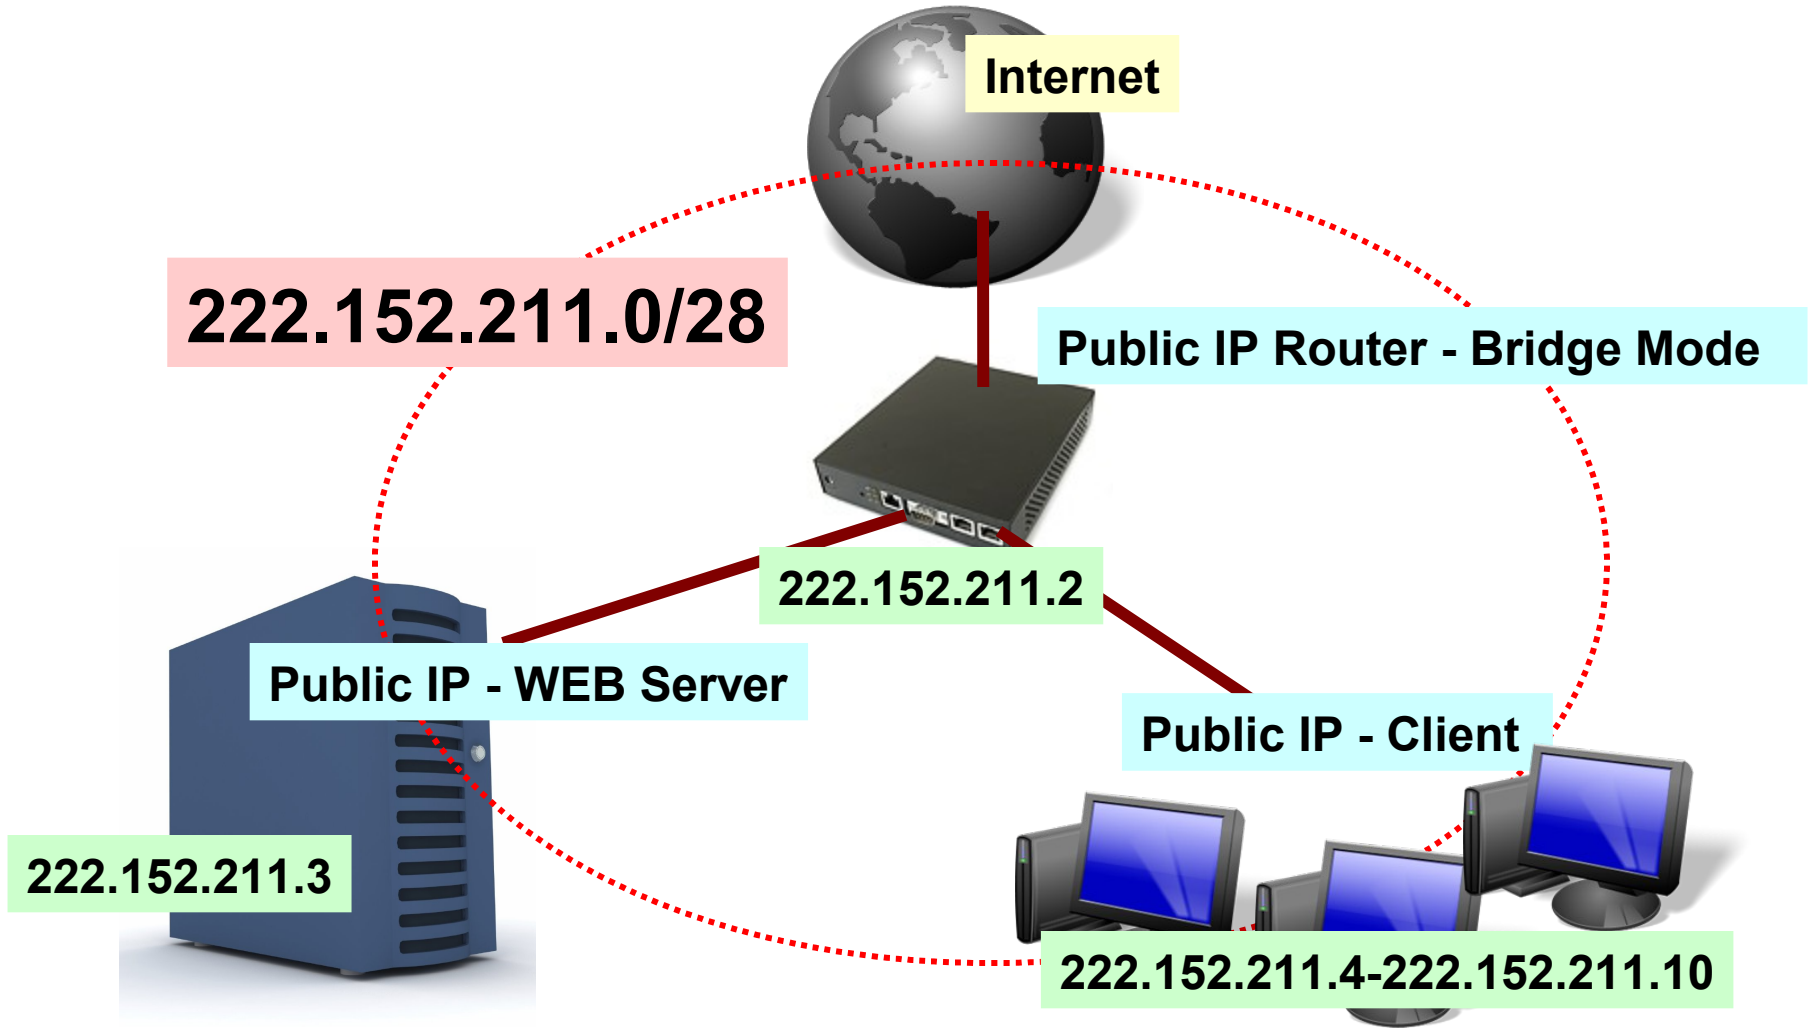

- Berikut ini jenis-jenis interface yang dapat dijadikan Bridge Port :
 - **Ethernet**
 - **VLAN**
 - Merupakan bagian dari ethernet atau wireless interface
 - Jangan melakukan bridge sebuah VLAN dengan interface induknya
 - **Wireless AP, WDS, dan Station-pseudobridge**
 - Note: station-pseudobridge tidak bisa di-bonding
 - **EoIP (Ethernet over IP)**
 - Lebih detail pada slide lain
 - **PPTP**
 - Selama bridge dilakukan baik di sisi server maupun client

Bridge!

- Kita tidak harus memasang IP Address pada sebuah bridge interface
- Jika kita menonaktifkan bridge, pada IP Address yang terpasang pada bridge akan menjadi invalid
- Kita tidak bisa membuat bridge dengan interface yang bukan bertipe ethernet seperti synchronous (serial), IPIP, PPPoE, dll.
- Namun, bisa kita lakukan bridge pada interface tersebut dengan membuat EoIP Tunnel terlebih dahulu.
- EoIP Tunnel dijelaskan lebih detail di bagian yang lain.

Bridge – Implementation Example

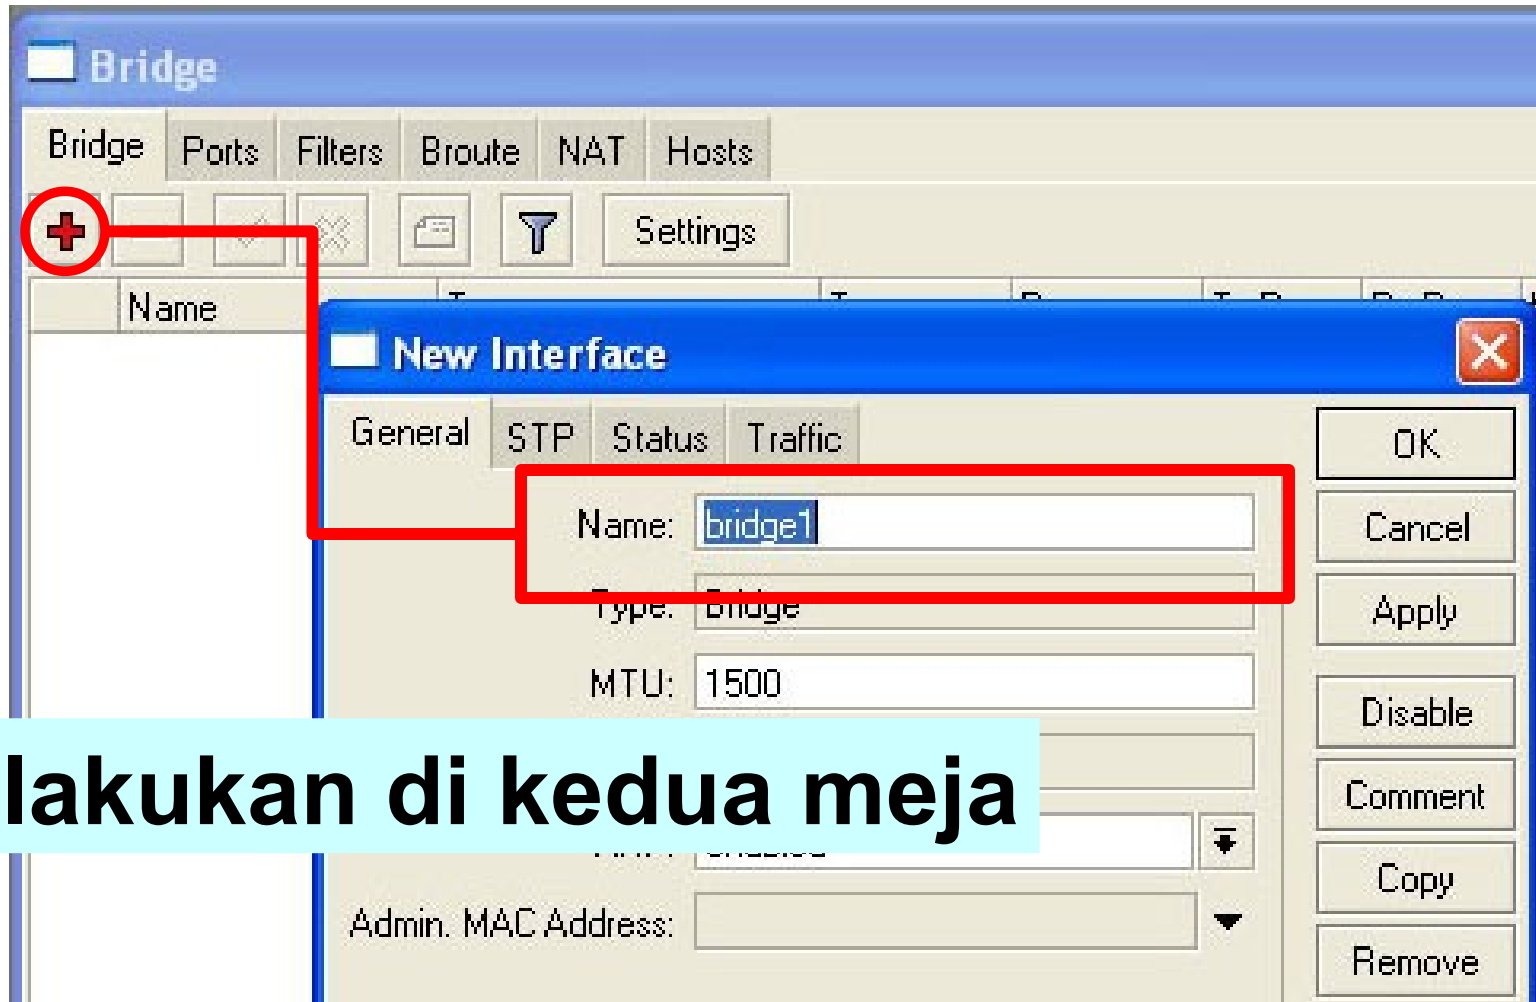

[LAB-1] Bridge Config

- Berpasangan dengan teman semeja, buatlah konfigurasi bridge berikut ini, sehingga dari laptop A bisa melakukan ping ke laptop B.

[LAB-1] Create Bridge

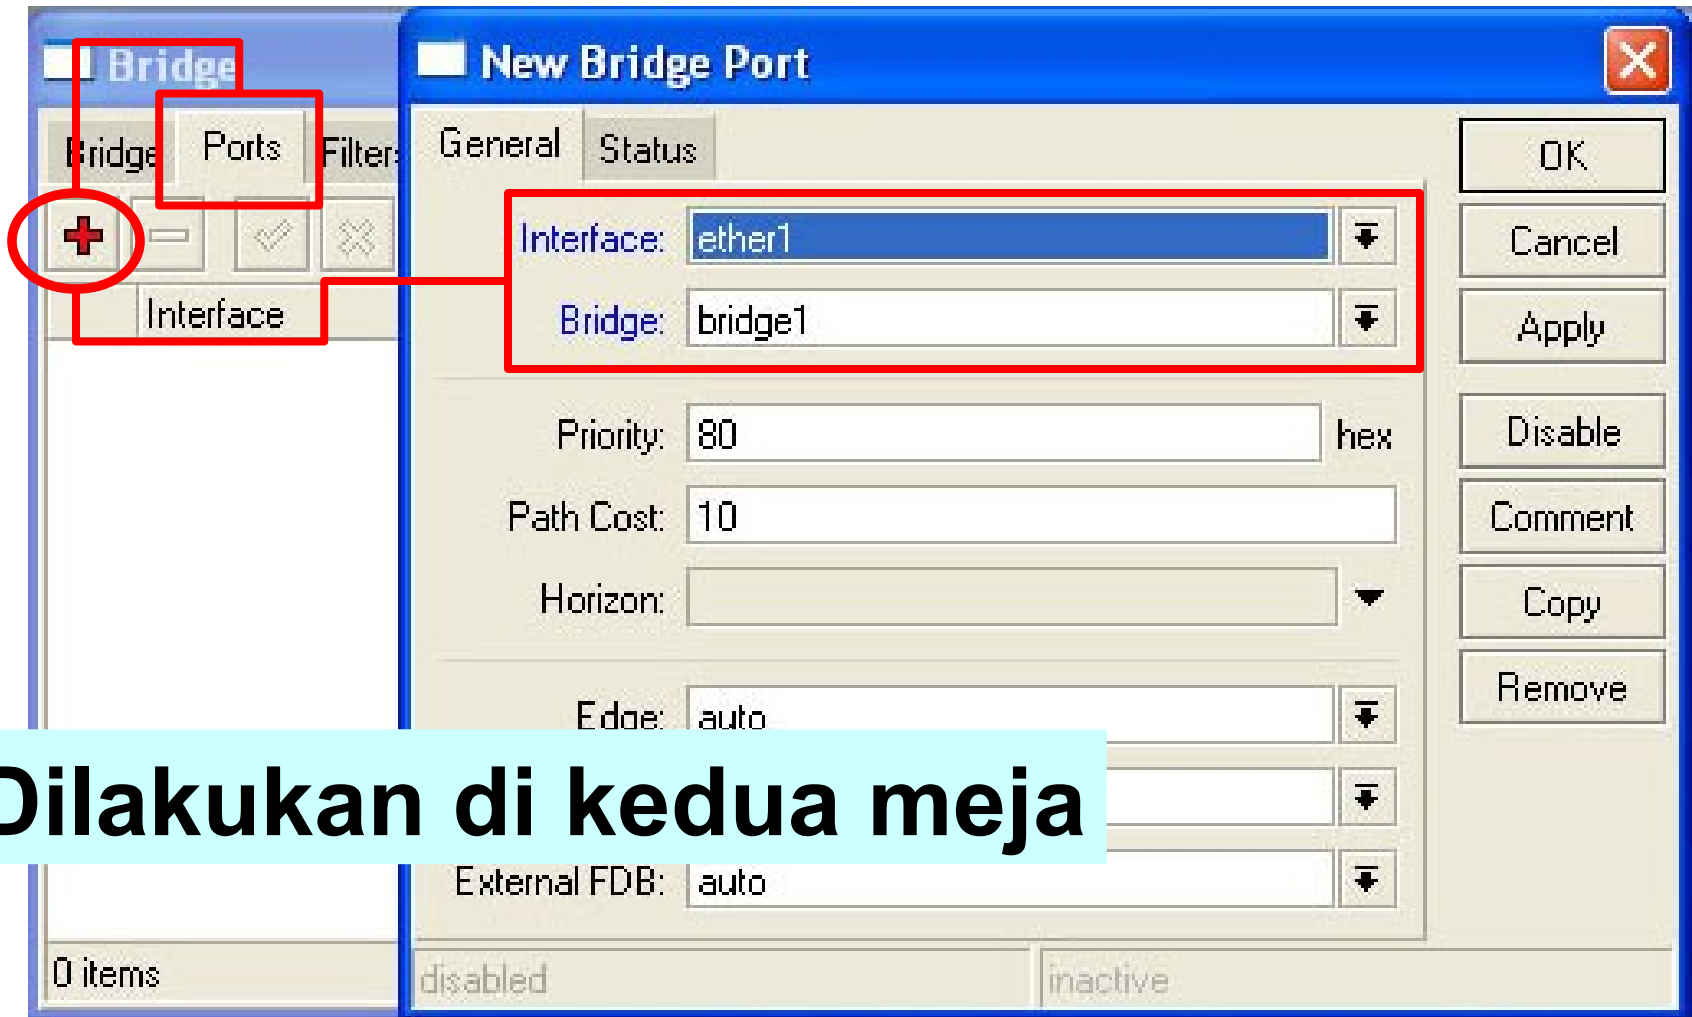

- Membuat interface bridge

Dilakukan di kedua meja

[LAB-1] Bridge Port

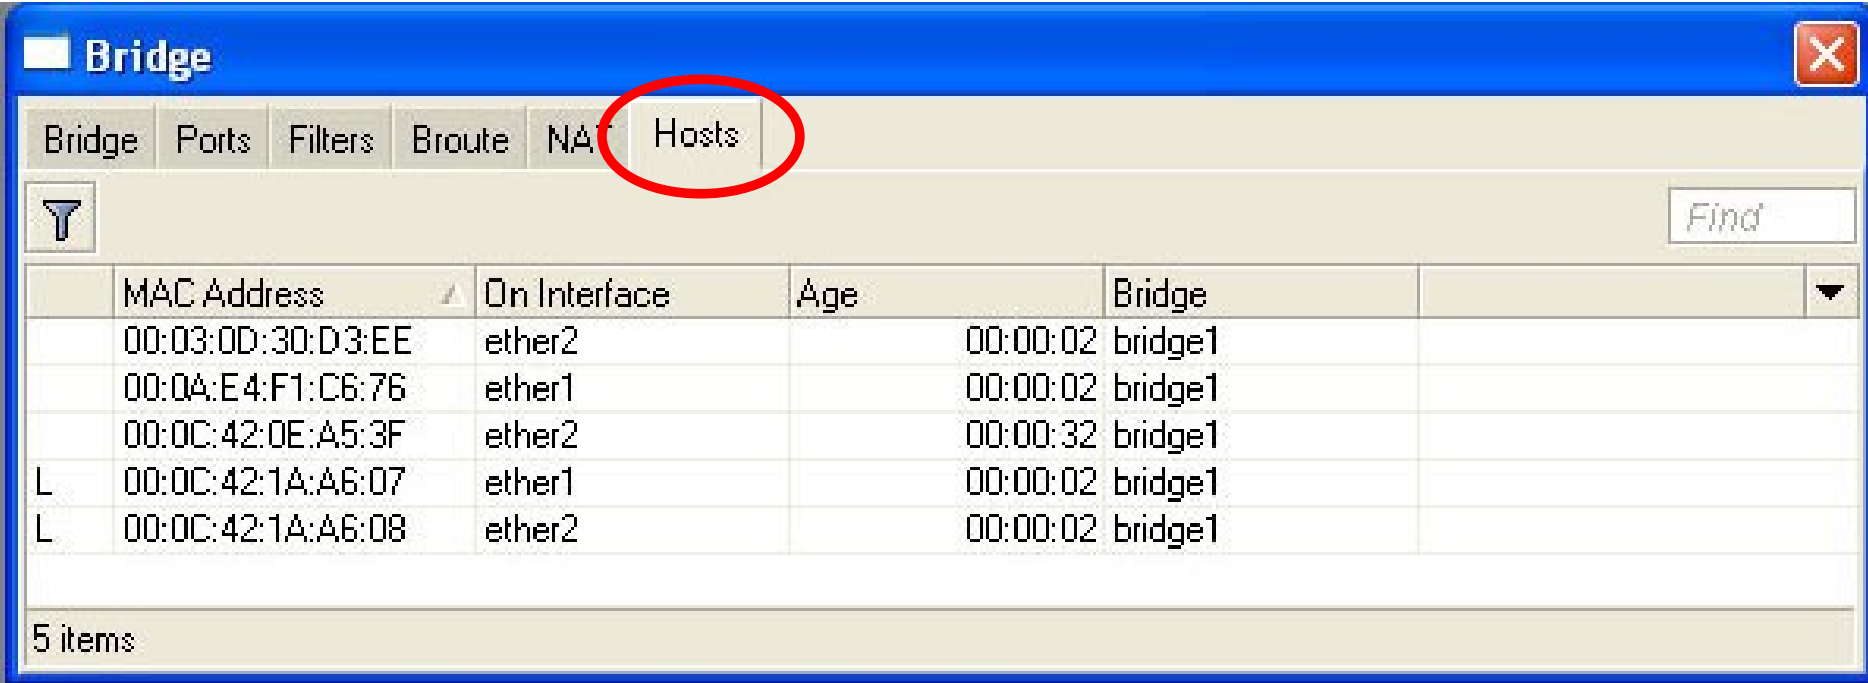

- Memasukkan interface ethernet ke interface bridge

Dilakukan di kedua meja

Bridge Monitoring

- Untuk melihat mac-address host yang terkoneksi dengan bridge tersebut

The screenshot shows the Mikrotik WinBox interface for Bridge Monitoring. The window title is "Bridge". The "Hosts" tab is selected and circled in red. Below the tabs is a search bar with a funnel icon and the text "Find". The main area contains a table with the following columns: MAC Address, On Interface, Age, and Bridge. The table lists five entries, with the last two marked with an 'L' in the first column. The status bar at the bottom indicates "5 items".

	MAC Address	On Interface	Age	Bridge
	00:03:0D:30:D3:EE	ether2	00:00:02	bridge1
	00:0A:E4:F1:C6:76	ether1	00:00:02	bridge1
	00:0C:42:0E:A5:3F	ether2	00:00:32	bridge1
L	00:0C:42:1A:A6:07	ether1	00:00:02	bridge1
L	00:0C:42:1A:A6:08	ether2	00:00:02	bridge1

5 items

Switch Chipset

- Digunakan pertama di RB433 dan RB450, Mikrotik mulai menggunakan “Switch CHIP” di beberapa produk RouterBoard terbaru.
- Memungkinkan untuk memanfaatkan port ethernet di RouterBoard yang sebelumnya hanya bisa digunakan untuk Routed Network menjadi Switched Network.

Switch Chipset – Master Port

- Di beberapa hardware Routerboard, Chipset ethernet yang terpasang sudah memiliki fungsi Switch Chip.

The screenshot displays the Mikrotik WinBox interface. On the left, the 'Interface List' window shows a table of interfaces. On the right, the 'Interface <ether5>' configuration window is open, showing various settings for the selected interface.

Interface	Name	Type
R	ether1	Ethernet
	ether2	Ethernet
	ether3	Ethernet
S	ether4	Ethernet
S	ether5	Ethernet

The 'Interface <ether5>' configuration window shows the following settings:

- Name: ether5
- Type: Ethernet
- MTU: 1500
- L2 MTU: 1598
- Max L2 MTU: 4074
- MAC Address: D4:CA:6D:29:4C:2C
- ARP: enabled
- Master Port: ether2
- Bandwidth (Rx/Tx): unlimited / unlimited
- Switch: 0

A red box highlights the 'ether5' interface in the list and the 'Master Port' dropdown menu in the configuration window, with a red line connecting them to show the configuration of the master port for ether5.

Switch Chip – Cable SPEED !

- Dengan Switch Chip, memungkinkan transfer data antar port bisa mencapai cable speed tanpa membebani processor.

Quiz !

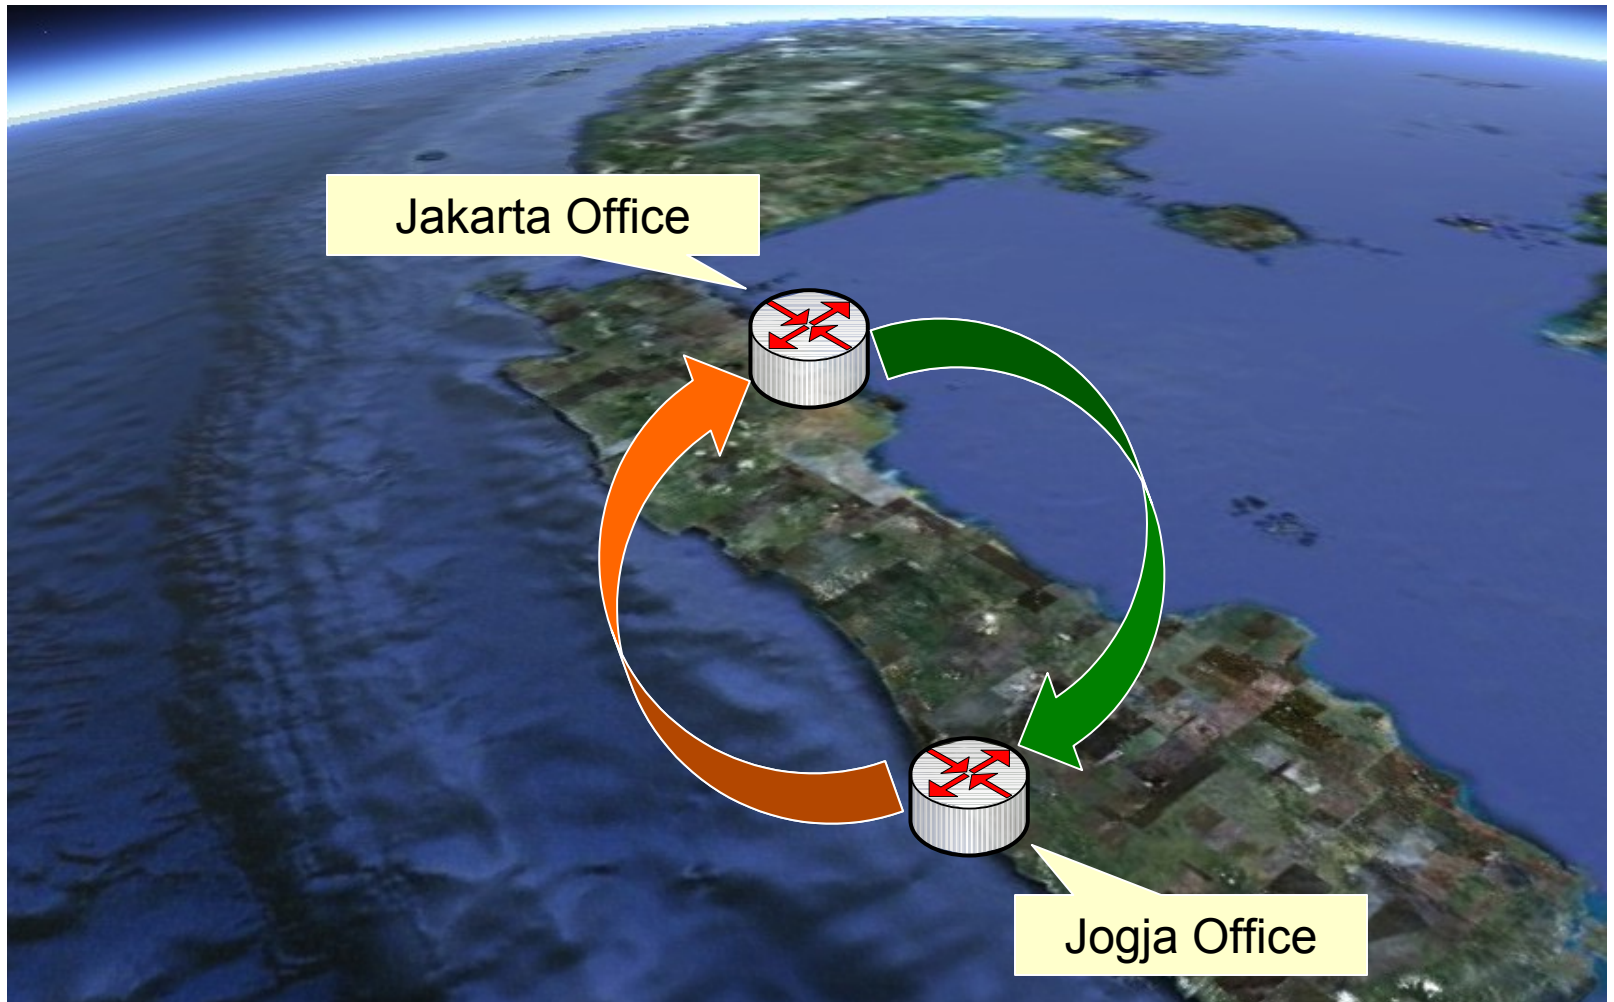

- Beda fungsi Bridge dan Switch ?
- Fungsi Switch bisa dijalankan antara interface ethernet dan wireless pada RouterBoard RB411AR ? Kenapa ?
- Hotspot server dan DHCP server tidak bisa dijalankan pada Bridge ? (Benar / Salah) Kenapa ?

Ethernet over IP (EoIP)

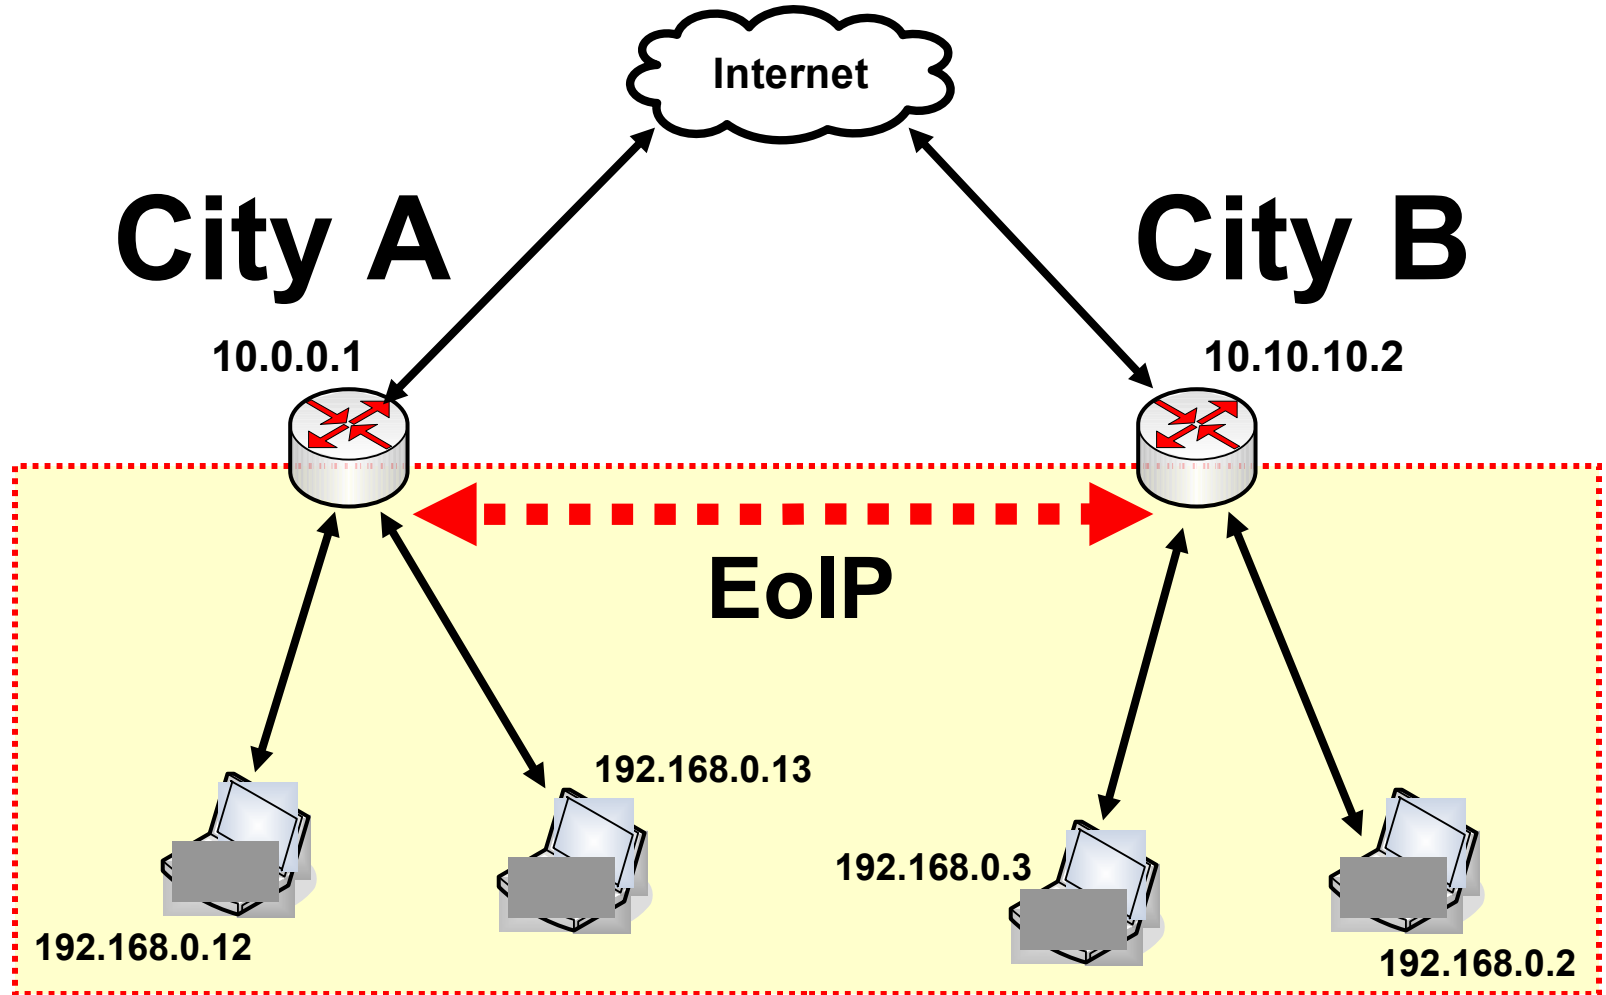

- Adalah protocol pada Mikrotik RouterOS yang membangun sebuah **Network Tunnel** antar mikrotik router di atas sebuah koneksi TCP/IP.
- Interface EoIP dianggap sebagai sebuah Interface Ethernet
- Jika Bridge mode diberlakukan pada EoIP tunnel maka semua protocol yang berbasis ethernet akan dapat berjalan di Bridge tersebut (Dianggap seperti hardware interface ethernet yang di bridge).
- Hanya dapat dibuat di Mikrotik RouterOS
- Menggunakan Protocol **GRE** (RFC1701)

Network Skenario

- Bridge over WAN / Internet

EoIP Example

Secara Virtual setiap Laptop terletak di dalam satu segmen network yang sama.

EoIP Configuration - Example

The screenshot displays the Mikrotik WinBox interface configuration window for an EoIP Tunnel. The 'Interface List' window is open, showing a list of interfaces on the left and the configuration details for 'Interface <eoip-tunnel1>' on the right. The 'EoIP Tunnel' option is highlighted in the interface list. The configuration details for the selected interface are as follows:

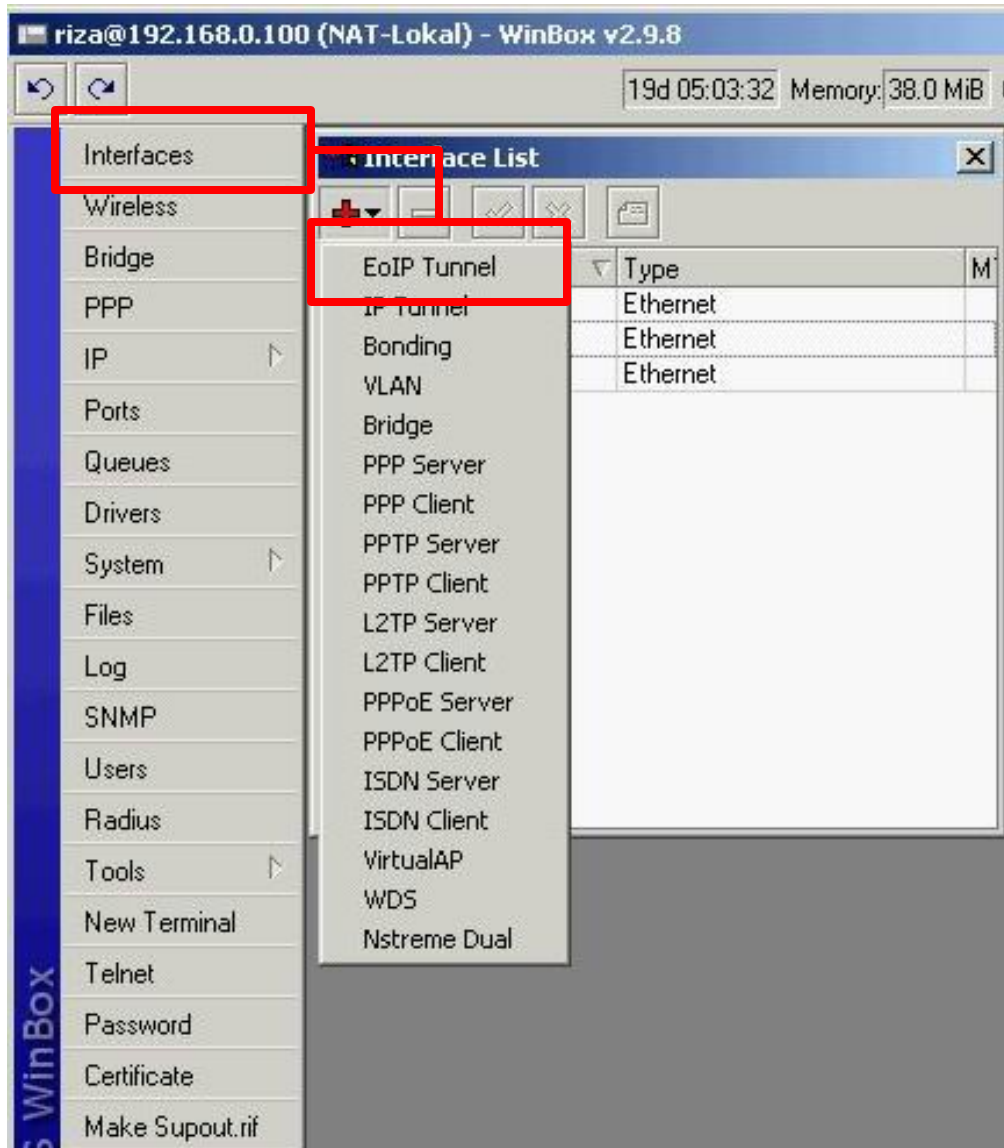

Field	Value
Name	eoip-tunnel1
Type	EoIP
MTU	1500
MAC Address	FE:00:90:31:CF:95
ARP	enabled
Remote Address	202.65.112.10
Tunnel ID	0

Additional configuration options visible include 'General' and 'Traffic' tabs, and a status indicator at the bottom showing 'disabled' and 'running'.

[LAB-2] EoIP Tunnels

EoIP Tunnels - Config

- Perlu diingat bahwa **TUNNEL ID** pada sebuah EoIP tunnel harus sama antar kedua EoIP Tunnel.
- **MAC Address** antar EoIP harus berbeda satu dengan yang lain.

EoIP Tunnels Config

Quiz !

- EoIP harus menggunakan ip Public supaya bisa berjalan dengan normal ? Kenapa ?
- Untuk mengaktifkan EoIP harus juga mengaktifkan bridge ? Kenapa ?

Wireless Concept

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

Wireless LAN – 802.11

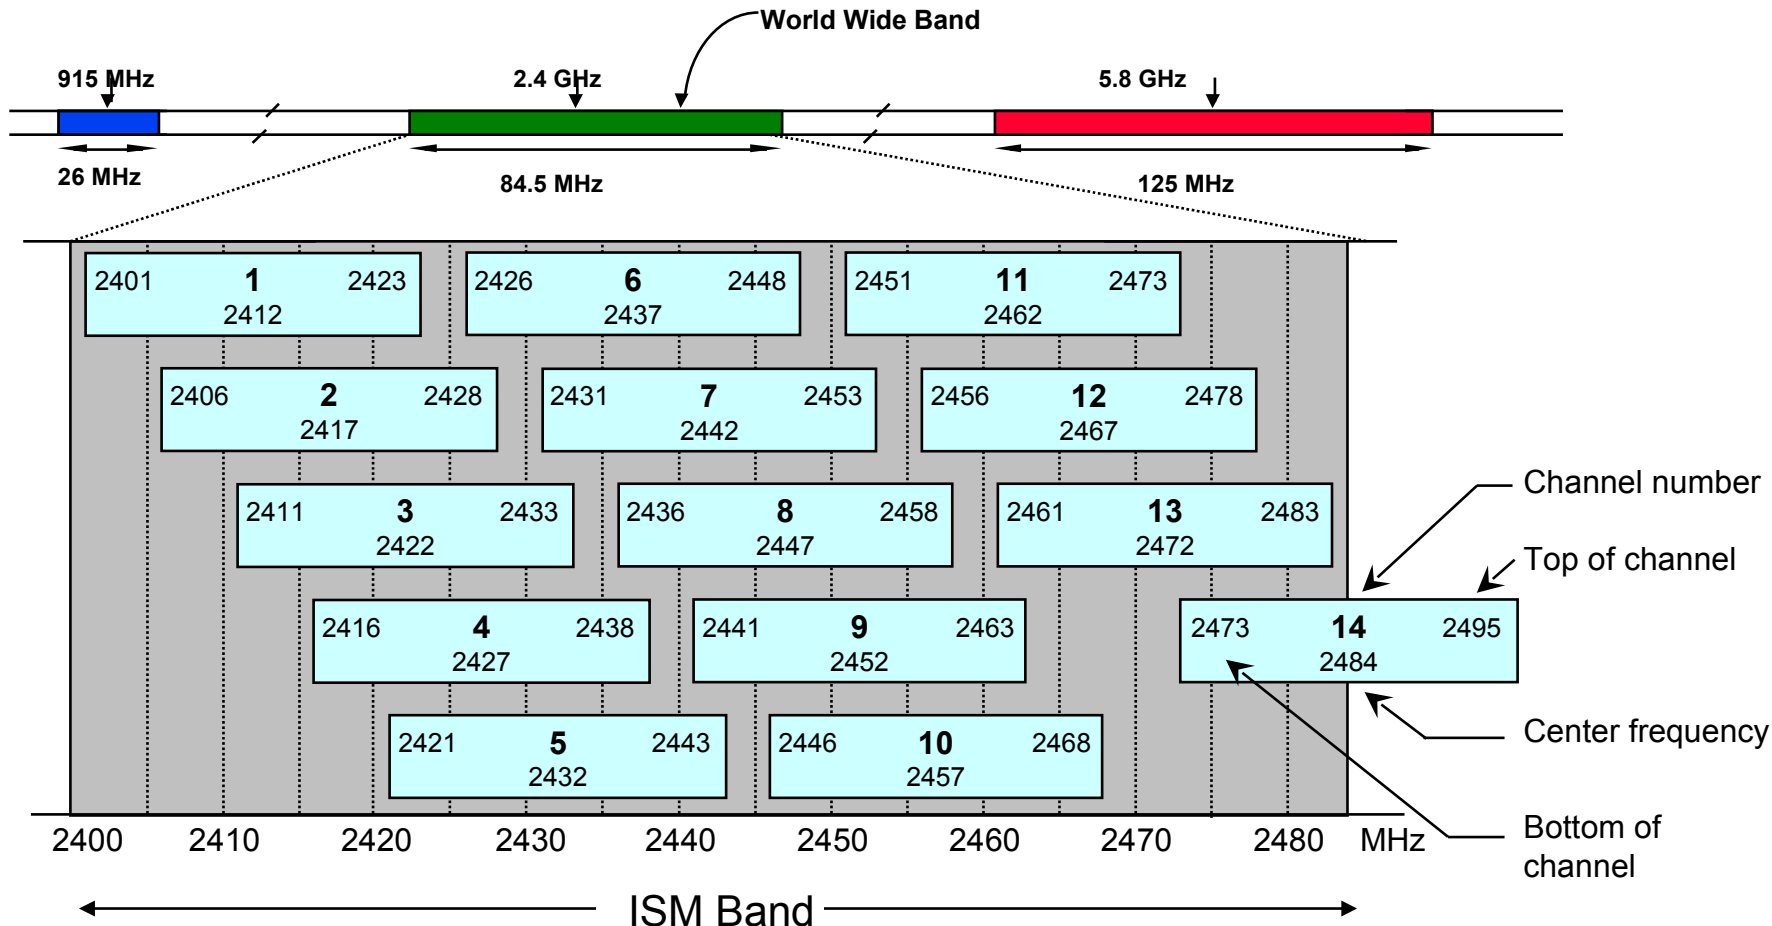

○ 802.11 – 2.4Ghz

- **802.11-b** : Wireless Lan yang menggunakan Frequency 2.4Ghz berkecepatan transfer data **11Mbps**
- **802.11-b/g** : Wireless Lan yang menggunakan Frequency 2.4Ghz berkecepatan transfer data **54Mbps**
- **802.11-b/g/n** : Wireless Lan yang menggunakan Frequency 2.4Ghz berkecepatan transfer data **300Mbps**

○ 802.11 – 5Ghz

- **802.11-a/g** : Wireless Lan yang menggunakan Frequency 5Ghz berkecepatan transfer data **54Mbps**
- **802.11-a/g/n** : Wireless Lan yang menggunakan Frequency 5Ghz berkecepatan transfer data **300Mbps**

Channels 80211-b

- (14) 20 MHz wide channels

Channels 80211-a

- (12) 20 MHz wide channels
- (5) 40MHz wide turbo channels

Kaidah dalam WirelessLAN

- Kaidah Wireless :
 - **Tx Power** – Daya Pancar signal wireless
 - **Rx Sensivity** – Sesitifitas Menerima signal
 - **Looses** – hambatan karena Kabel & Konektor
 - **EIRP** – Daya pancar total beserta Antenna
 - **Free Space Loss (FSL)** – Hambatan udara
- Kaidah Wireless Outdoor :
 - **Line of Sight** – Hambatan dan penghalang
 - **Freznal Zone** – Media rambat Frequency
 - **Lengkung Bumi** – Penghalang Wlan jarak jauh

Signal Calculation Formula

RX-Rate /
Signal Strength

=

EIRP

-

Path Loss
(FSL)

+

**Penguatan
Penerimaan**

Harus lebih besar dari
RX-Sensivity
interface penerima

Sesuai rumus FSL,
targantung frekuensi
dan jarak

TX-Rate Pemancar
+ Kekuatan antenna pemancar
- Loss Kabel & konektor

Kekuatan antenna penerima
- Loss Kabel & konektor

RX-Rate Calculation

- Contoh Kasus :
 - Access Point 100 mWatt
 - tanpa booster
 - kabel LMR400 100 feet
 - antenna grid 24 db
 - frekuensi 2,4 GHz
 - jarak 10 km

Calculation Example

<i>Perangkat</i>		<i>db</i>
Pemancar (EIRP)		37.2 db (EIRP)
Access Point 100 mWatt	20 dbm	
Kabel 30 meter	-6.8 db	
Antenna 24 db	24 dbi	
FSL / Path Loss 2,4 GHz 10 km		-120.026 db
Penerima (Penguatan Penerimaan)		17.2 db
Kabel 30 meter	-6.8 db	
Antenna 24 db	24 dbi	
RX-Rate / Signal Strength		-65.626 db

Online Calculator

Frequency	<input type="text" value="2400"/> MHz	

Calculate

Link theoretical status	reliable
Theoretical signal level at site 1	-56/required -90
Theoretical signal level at site 2	-56/required -90

- [www.mikrotik.co.id/
test_link.php](http://www.mikrotik.co.id/test_link.php)

Line of Sight (LOS)

- Aplikasi Wireless LAN di luar ruangan harus memenuhi prinsip Line of Sight

Line of Sight (LOS)

- Aplikasi Wireless LAN di luar ruangan harus memenuhi prinsip Line of Sight

Ketinggian alat harus disesuaikan untuk mencapai line of sight

Earth Curve

- Untuk jarak yang cukup jauh, perencanaan ketinggian antena/tower harus memperhitungkan lengkung bumi.

Antena Height Calculator

Masukkanlah Nilai Parameter berikut ini

Frekuensi : MHz
Jarak : km
Asumsi tinggi penghalang rata-rata : meter

Hasil Perhitungan

Jari-jari Fresnel Zone : 17.68 meter
80 % fresnel zone : 14.14 meter
Tinggi lengkung bumi : 1.96 meter
Tinggi antena minimum yang disarankan : 26.1 meter

- http://www.mikrotik.co.id/test_tower.php

Antenna Concept

- Directionality
 - Omnidirectional
 - Directional (limited range of coverage)
- Antenna Gain
 - In db
 - Higher db, longer distance coverage
- Polarization
 - Usually using vertical polarization

Omni Directional

Applications:

- 2.4 GHz ISM Band
- IEEE 802.11b, 802.11g Wireless LAN
- IEEE 802.11n (Pre-N, Draft-N, MIMO) Applications
- Bluetooth®
- WiFi
- Wireless Video Systems
- Multipoint and Mobile Applications

Features:

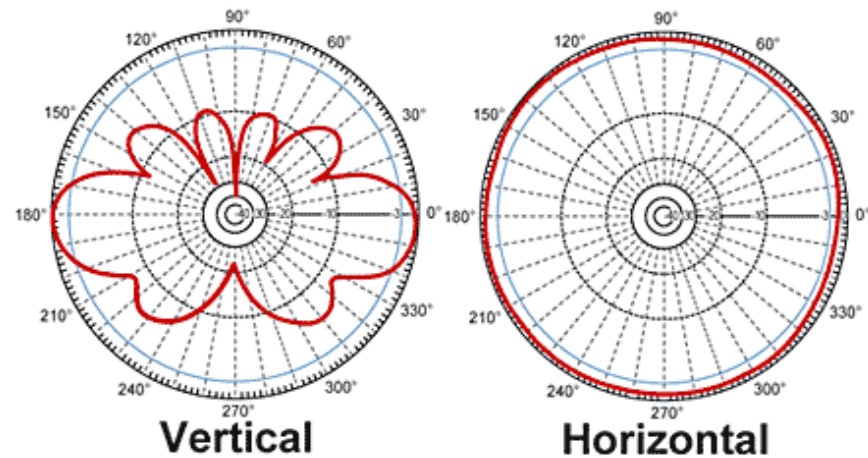

- Flexible "Rubber Duck" antenna
- Tilt and swivel design
- N-Male Connector
- RoHS Compliant

Electrical Specifications

- Frequency 2400-2500 MHz
- Gain 9 dBi
- Horizontal Beam Width 360°
- Vertical Beam Width 25°
- Impedance 50 Ohm
- Max. Power 50W
- VSWR < 2.0:1
- Lightning Protection DC Ground

Mechanical Specifications

- Length 15" (381 mm)
- Max. Diameter 0.62" (15.7 mm)
- Finish Matte Black
- Connector N-Male
- Operating Temperature -40° C to to 60° C (-40° F to 140° F)
- Polarization Vertical
- Flame Rating: UL 94HB
- RoHS Compliant: Yes

Flat Panel Antenna

Electrical

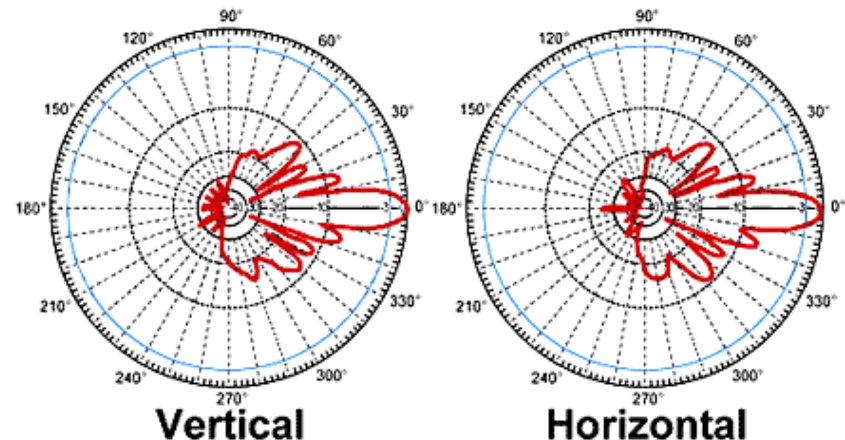

- **Frequency range:** 4.9 - 5.875 GHz
- **Gain, typ.:** 23 dBi @ 5.15-5.875 , 21 dBi @ 4.9-5.15
- **VSWR, max.:** 1.5 : 1 @ 5.15-5.875 , 1.9 : 1 @ 4.9-5.15
- **3 dB Beam-Width, H-Plane, typ.:** 10.5 °
- **3 dB Beam-Width, E-Plane, typ.:** 10.5 °
- **Side Lobes, min.:** -23 dB
- **Polarization:** Linear Vertical
- **Cross Polarization, min.:** -24 dB
- **Front to Back Ratio, min.:** -30 dB
- **Input power, max:** 30 Watt
- **Input Impedance:** 50 Ohm
- **Lightning Protection:** DC Grounded

Mechanical

- **Dimensions (HxWxD):** 305 x 305 x 15 mm (12"x12"x0.6")
- **Connector:** N-Type, Female
- **Back Plane:** Aluminum; protected through chemical passivation
- **Radome:** UV Protected Polycarbonate

Environmental

- **Operating Temperature Range:** -40° C to +65° C
- **Vibration:** According to IEC 60721-3-4
- **Wind Load:** 200 km/h (survival)
- **Flammability:** UL94
- **Water Proofing:** IP-67
- **Humidity:** ETS 300 019-1-4, EN 302 085 (annex. A.1.1)
- **Ice and Snow:** 25 mm radial (survival)
- **Salt Fog:** According to IEC 68-2-11
- **Service Life:** > 10 years

Grid Antenna

Model	HG5822G	HG5827G
Frequency	5725-5850 MHz	
Gain	22 dBi	27 dBi
Polarization	Horizontal or Vertical	
Horizontal Beam Width	10 °	6°
Vertical Beam Width	13 °	9°
Front to Back Ratio	25 dB	
Impedance	50 Ohm	
Max. Input Power	100 Watts	
VSWR	< 1.5:1 avg.	
Weight	3.0 lbs. (1.4 kg)	5.3 lbs. (2.4 kg)
Grid Dimensions	11.8 x 15.7 inches (300 x 400 mm)	15.7 x 23.6 inches (400 x 600 mm)
Mounting	2 in. (50.8 mm) diameter mast max.	
Operating Temperature	-40° C to 85° C (-40° F to 185° F)	
Lighting Protection	DC Ground	
Connector	N-Female	

Horizontal

Vertical

Solid Disc Antenna

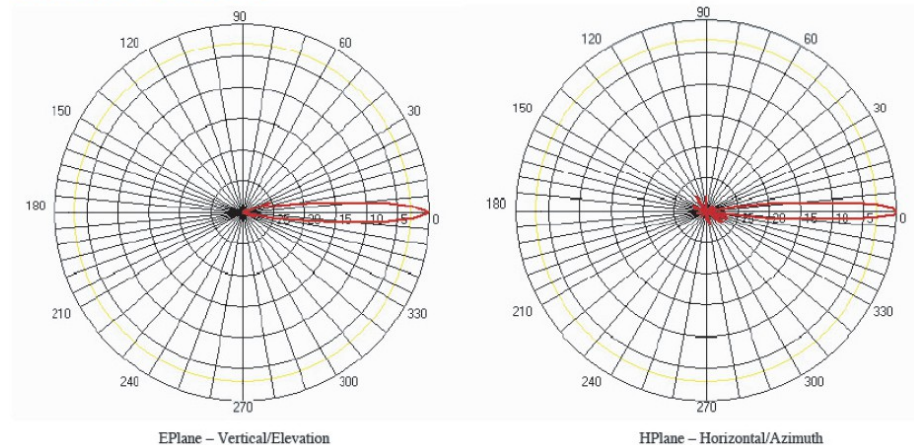

Spesifikasi Teknis

- **Frequency Band:** 5470 – 5725 MHz
- **Dimensions:** Diameter 500 mm
- **Gain:** 26,1 dBi
- **-3 dB Beamwidth:** 6°
- **Weight:** 1 500 g
- **Connector:** N – Female
- **Polarization:** Horizontal / Vertical
- **Impedance:** 50 Ω
- **Material:** Aluminium + ABS

Biasanya digunakan untuk aplikasi point to point untuk jarak yang jauh.

Mounting pada tower harus baik, faktor angin cukup berpengaruh. Dibutuhkan ketelitian pointing.

Antenna Patterns

Sectoral Antenna

Frequency	2400-2500 MHz
Gain	20 dBi
Horizontal Beam Width	120 degrees
Vertical Beam Width	+/- 6.5°
Impedance	50 Ohm
Max. Input Power	250 Watts
VSWR	< 1.3:1 avg.
Connector	N Female
Lightning Protection	Direct Ground

Weight	12 lbs. (5.44 Kg)
Dimensions	39 x 9 x 2.5 inches (99 x 22.9 x 6.4 cm)
Radome Material	UV-Inhibited Polymer
Reflector Material	Aluminum
Operating Temperature	-40° C to to 85° C (-40° F to 185° F)
Mounting	2 inch (5 cm) O.D. pipe max.
Polarization	Vertical
Downtilt (mech)	0 to 20 degrees (adjustable)

Vertical

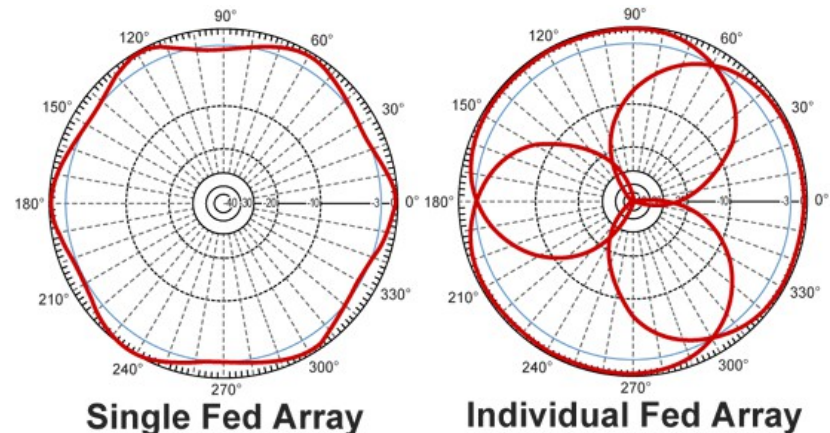

Horizontal

Sectoral Antenna (Array)

Models	HK2414-120	HK2417-120	HK2420-120
Frequency	2400 - 2500 MHz		
Antenna Gain	14 dBi*	17 dBi*	20 dBi*
Polarization	Vertical		
Horizontal Beam Width (Individual antenna)	120°	120°	120°
Vertical Beam Width (Individual antenna)	15°	6.5°	6.5°
Lightning Protection	DC Ground		
Power Rating (Single Fed)	25 Watts		
Antenna Radome Material	UV-inhibited Plastic		
Mounting System Material	Stainless Steel		
Mounting (Round Mast)	1¼" to 2" (31.7 to 50.8 mm) dia.		
Mounting (Square Mast/Beam)	¾" (82.5 mm) square max.		
Dimensions **(O.D. Panels Fully Retracted)	20" (508 mm) x 17" (432 mm) O.D.**	39" (990 mm) x 17" (432 mm) O.D.**	39" (990 mm) x 17" (432 mm) O.D.**
Weight	14 lbs. (6.3 kg)	31 lbs. (14 kg)	44 lbs. (20 kg)

* Antenna gains specified when sectors are individually fed.

Single Fed Array

Individual Fed Array

Point to Point

- Menghubungkan 2 buah alat, biasanya menggunakan antenna directional dan jarak yang cukup jauh
- Kedua alat cukup menggunakan lisensi level 4 : Bridge dan Station
- Bisa menggunakan proprietary setting (nstream, Custom Frequency)

Point to Point (Dual Nstream)

- Masing-masing titik menggunakan 2 buah antenna dan 2 buah wireless card
- Satu link untuk transmit dan satu link untuk receive.
- Mikrotik proprietary setting

Point to Multipoint

- 1 buah AP Mikrotik sebagai base station untuk melayani CPE

Wireless Distribution System (WDS)

- WDS (Wireless Distribution System) is the best way how to interconnect many access points and allow users to move around without getting disconnected from network.

Wireless Configuration

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

Wireless Configuration

- Basic Configuration :
 - **Wireless Tools** – Scan, Snoop, Freq-Usage (site survey)
 - **Point to Point** – only “one” Client
 - **Registration Table** – Wireless Link Monitoring
 - **Wireless N (example)** – For “N Wireless Card”
 - **Wireless Bridge** – Inter-building Connection
 - **Point to Multi Point** – more than one Client
 - **Access List** – mac-address security
 - **Wireless Security** – **Encryption** wireless security
- Wireless Protocol
 - **VAP** – Virtual Access Point
 - **Nstreme** – Mikrotik Wireless Performance Protocol
 - **WDS** – Wireless Mesh Network

Wireless Mode List

Wireless Mode :

- alignment-only
- ap-bridge
- bridge
- nstreme-dual-slave
- station
- station-wds
- wds-slave
- station-pseudobridge
- station-pseudobridge-clone
- station-bridge

Wireless Mode - 1

- **alignment-only** – Digunakan untuk melakukan pointing dengan bantuan “**Beeper**” pada Routerboard.
- **ap-bridge** – Mode wireless sebagai Access Point untuk topologi **Point-to-Multipoint**.
- **bridge** – Mode wireless sebagai Access Point untuk topologi **Point-to-Point** (hanya bisa menerima satu client).
- **nstreme-dual-slave** – Mode wireless untuk mengaktifkan topologi Nstreme-dual (Wireless Full Duplex)
- **station** – Mode Wireless sebagai Client untuk topologi **Point-to-Point** dan juga **Point-to-Multipoint**

Wireless Mode – 2

- **station-wds** – Mode wireless sebagai client tetapi mengaktifkan protocol WDS (Digunakan untuk wireless WDS client)
- **wds-slave** – Mode wireless sebagai Access Point dan juga mengaktifkan protocol WDS (Digunakan untuk wireless WDS repeater)
- **station-pseudobridge** – Mode wireless sebagai client yang bisa mengaktifkan bridge pada “**station**” tanpa harus menggunakan protocol WDS
- **station-pseudobridge-clone** – Mode wireless sama seperti **station-pseudobridge** yang dilengkapi dengan fungsi cloning mac-address dari interface ethernet
- **station-bridge** – Mode wireless client untuk bridge network sesama perangkat Mikrotik

[LAB-1] Point to Point

○ AP Side

- Mikrotik Min Licence Level 3
- Set mode, ssid, band, frequency
- mode=bridge
 - Can serve only 1 station

○ Client Side

- Mikrotik Min Licence Level 3
- Set mode, ssid, band, scan-list
- mode=station
- Make sure frequency is in scan-list

[LAB-1] P2P (AP Side)

- Konfigurasi :
- Set **mode**, **ssid**, **band** dan **frequency**
- mode=bridge
 - Hanya bisa terkoneksi dengan 1 station (1 client)

Interface <wlan2>

General Wireless WDS Nstreme NV2 Status ...

[LAB-2] Point to Point Test

- Tambahkan IP address di interface **Wlan2**.
- Test koneksi wireless kedua router dengan tool Ping.
- Setelah test ping berhasil maka wireless point-to-point sudah siap.

Wireless N Config - Example

Interface <wlan1>

Advanced HT HT MCS WDS Nstreme Tx Power Status ...

HT Tx Chains: 0 (chain0) 1 (chain1)
HT Rx Chains: 0 (chain0) 1 (chain1)

HT AMPDU Limit: 8192
HT AMSDU Threshold: 8192
HT Guard Interval: any
HT Extension Channel: below control

- HT AMPDU Priorities -
 0 1 2 3
 4 5 6 7

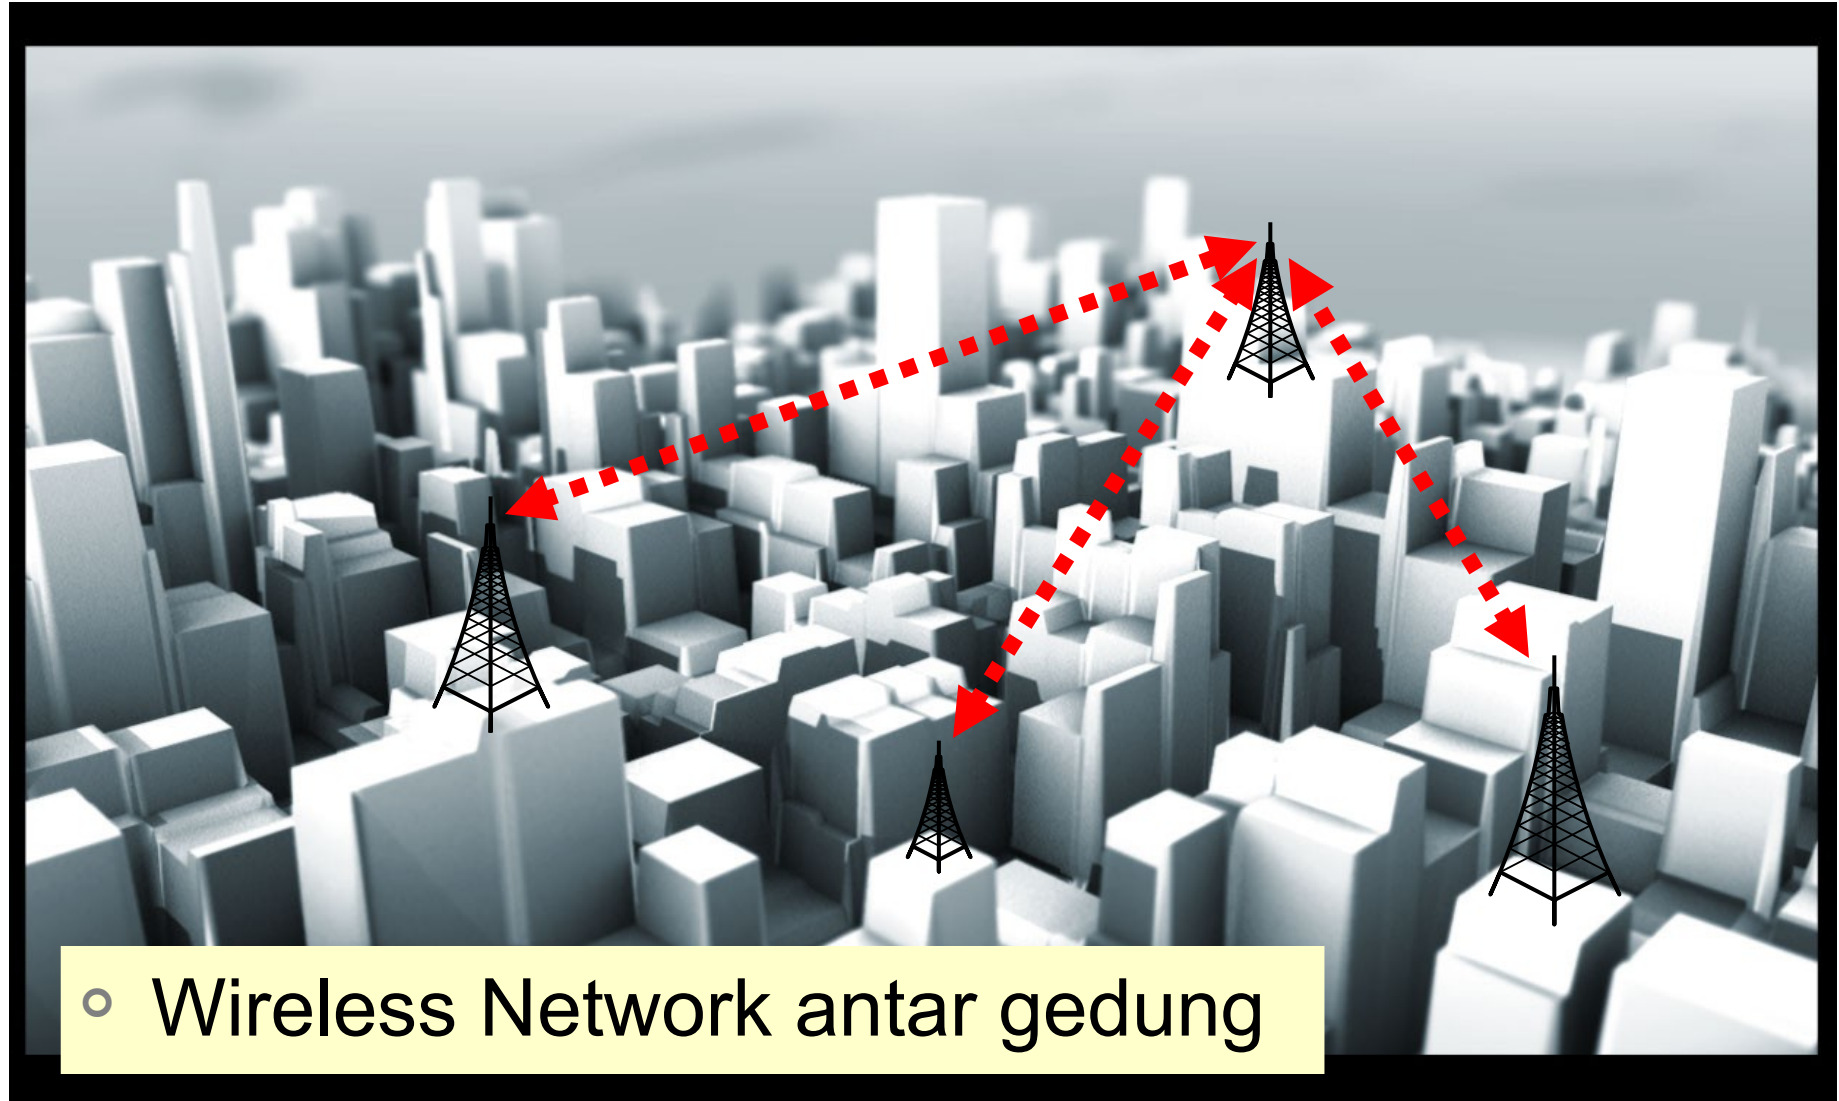

Aktifkan **1xMIMO** atau **2xMIMO**

Aktifkan **channel** tambahan

Wireless Bridge

- Mikrotik **Station** mode “**tidak bisa**” langsung dimasukkan ke bridge port (keterbatasan protocol)
- maka?
 - Bisa menggunakan **EoIP** antara **ap-bridge** and **station** – seperti pada lab di materi bridge
 - Pilihan kedua menggunakan mode **WDS-station!** (Throughput drop...).
 - Pilihan ke 3 menggunakan mode baru yaitu **station-pseudobridge**

Wireless Bridge - Implementation

- Wireless Network antar gedung

[LAB-3] Wireless Bridge

- Buatlah konfigurasi **AP** vs **client** yang digunakan untuk Bridge Network via wireless, sisi client menggunakan mode **station-pseudobridge**.
- Setelah wireless sudah terkoneksi masukkan interface wireless Wlan2 dan ether1 ke dalam **Bridge Port** (dilakukan di kedua router). Maka laptop kedua sisi bisa berkomunikasi dalam satu segmen.

[LAB-3] Wireless Bridge- Bridge Config

The screenshot displays the Mikrotik WinBox interface. On the left, the 'Interfaces' menu is open, with 'Bridge' selected and highlighted by a red box. In the center, the 'Bridge' configuration window is visible, showing a '+' button circled in red. On the right, the 'New Interface' dialog is open, with the 'Name' field containing 'bridge1' and highlighted by a red box. Other fields in the dialog include 'Type: Bridge', 'MTU: 1500', 'L2 MTU', 'MAC Address', and 'ARP: enabled'. A red line connects the '+' button to the 'Name' field. At the bottom, a cyan box contains the text 'Dilakukan di kedua meja'.

Dilakukan di kedua meja

[LAB-3] Wireless Bridge – Bridge Ports Config

The screenshot displays the Mikrotik WinBox interface for configuring bridge ports. On the left sidebar, the 'Bridge' menu item is highlighted with a red box. In the main window, the 'Bridge' tab is active, and a '+' icon is circled in red. Two 'New Bridge Port' dialog boxes are shown, each with a red box around its 'Interface' and 'Bridge' fields. The first dialog shows 'ether1' as the interface and 'bridge1' as the bridge. The second dialog shows 'wlan2' as the interface and 'bridge1' as the bridge. Both dialogs also show 'Priority: 80' and 'Path Cost: 10'. A light blue banner at the bottom of the interface contains the text 'Dilakukan di kedua meja'.

Interface: ether1
Bridge: bridge1

Interface: wlan2
Bridge: bridge1

Priority: 80
Path Cost: 10

Dilakukan di kedua meja

[LAB-4] Point to Multi Point

- Mikrotik difungsikan sebagai access point. Digunakan standart 80211b atau 80211b/g sehingga semua client (berbagai vendor dan berbagai type) dapat terkoneksi.

[LAB-4] P2MP – AP Side

- Membutuhkan lisensi level 4
- Set mode=ap-bridge
- Konfigurasi lainnya sama dengan konfigurasi point-to-point

Interface <wlan2>

General Wireless WDS Nstreme NV2 Status ...

Mode: ap bridge

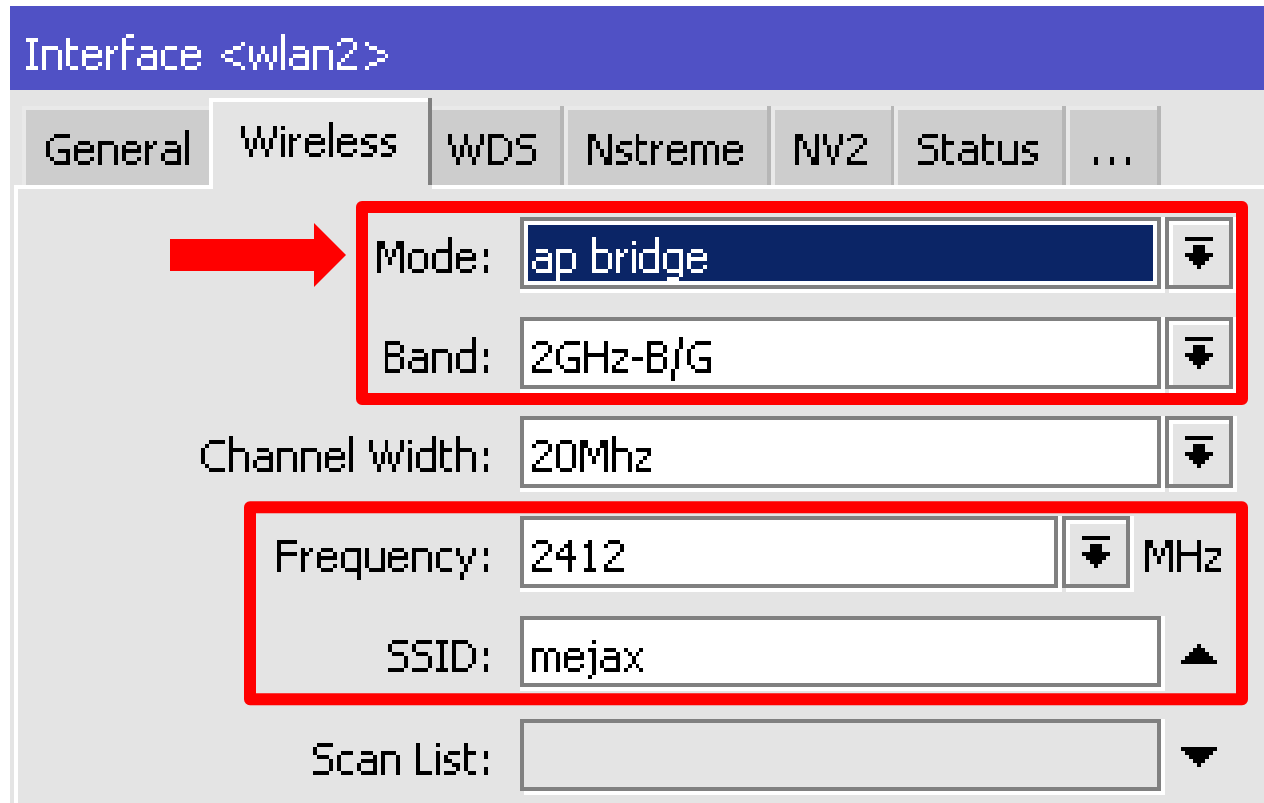

Band: 2GHz-B/G

Channel Width: 20Mhz

Frequency: 2412 MHz

SSID: mejax

Scan List:

[LAB-4] P2MP – Station Side

- Dapat menggunakan lisensi level 3
- Set mode, ssid, band, scan-list
- Set mode=station

Interface <wlan2>

General Wireless WDS Nstreme NV2 Status ...

Mode: station

Band: 2GHz-B/G

Channel Width: 20Mhz

Frequency: 2412 MHz

SSID: mejax

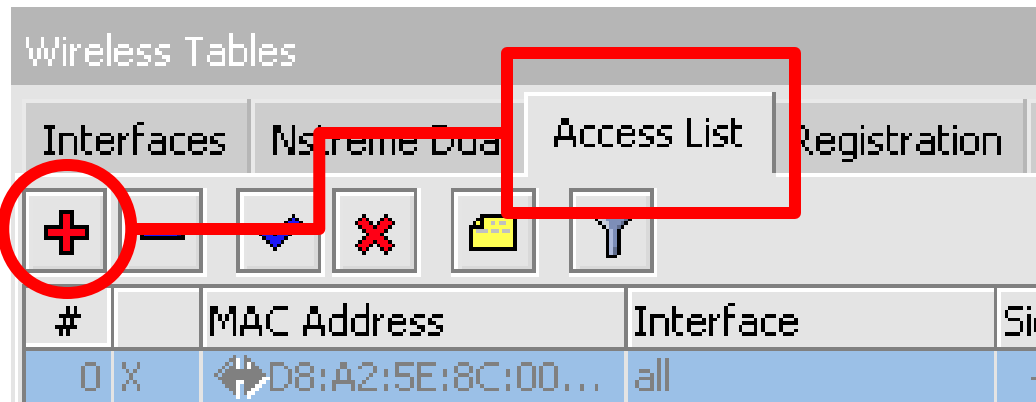

Scan List: 2400-2500

Wireless Access Management

- **Access List** – adalah filter autentikasi sebuah AP (AP side) terhadap client yang terkoneksi.
- **Connect List** – adalah filter autentikasi sebuah wireless station (client side) terhadap AP mana yang ingin terkoneksi.
- Rule autentikasi atau filter autentikasi dibaca secara terurut dari atas ke bawah seperti halnya sebuah filter firewall sampai request autentikasi mencapai kecocokan.
- Sangat dimungkinkan untuk memasang beberapa filter untuk mac-address yang sama dan juga satu rule untuk semua mac-address.
- Sebuah rule filter mac-address bisa diterapkan pada sebuah interface wireless saja atau bisa juga untuk semua interface.
- Jika tidak ada rule yang sesuai maka akan digunakan default policy (**default authentication & default forward**) dari wireless interface tersebut.

Client Management

- Kita dapat melakukan pengaturan untuk setiap klien menggunakan :
- Access List :
 - MAC Address
 - Signal Strength
 - Time

AP Access Rule <D8:A2:5E:8C:00:B9>

MAC Address:

D8:A2:5E:8C:00:B9

[LAB-5] Access List Mac filter

- Gunakan filter Mac-address untuk menentukan client yang terkoneksi.

Wireless Security

- Karena sifat dari wireless yang “open access” maka sebuah access point akan rentan terhadap serangan dari pihak yang tidak bertanggung jawab.
- Sudah saatnya untuk mengimplementasikan Wireless Security untuk menjaga AP tersebut dari berbagai serangan.

[LAB-6] WPA Lab

- Gunakan WPA-PSK untuk mengamankan jaringan wireless.
- Security profile pada interface akan mempengaruhi semua client.

Wireless Protocol - VAP

- Virtual Access Point (VAP) interface digunakan untuk membuat AP tambahan dari satu interface wireless yang ada di mikrotik.
- Virtual AP dianggap sebagai interface wireless yang independen dan bisa memiliki konfigurasi berbeda :
 - **SSID**
 - **Mac-Address**
 - **IP Address**
 - **WDS**
 - **Security Profile**
- Sedangkan untuk konfigurasi wireless **Mode**, **Band**, **Frequency** serta **Nstreme** tetap mengambil dari interface wireless master.
- Bisa diibaratkan seperti VLAN di wireless.

Wireless Protocol - Nstreme

- Nstreme adalah wireless protocol yang **MikroTik's proprietary** (protocol yang tidak kompatibel dengan vendor lain), yang digunakan untuk meningkatkan unjuk kerja jaringan wireless point-to-point maupun point-to-multipoint.
- Hanya bisa dilaktifkan di AP dan Client Mikrotik, tidak disupport oleh perangkat wireless brand lain.

Mikrotik Nstreme

- Keuntungan dari penggunaan Nstreme protocol :
- **Client polling** – melakukan kontrol terhadap jaringan wireless point-to-multipoint dengan mengaktifkan client polling (menyerupai sebuah AP menggunakan kontrol TokenRing).
- **Disable CSMA.**
- Tidak ada limitasi protocol (ACK timeout) di link wireless jarak jauh.
- Beban protocol di tiap frame data akan menjadi lebih ringan sehingga akan mempermudah untuk mendapatkan data-rate yang tinggi.
- Tidak ada lagi protocol yang menyebabkan penurunan kecepatan data-rate untuk link jarak jauh.

Routing

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

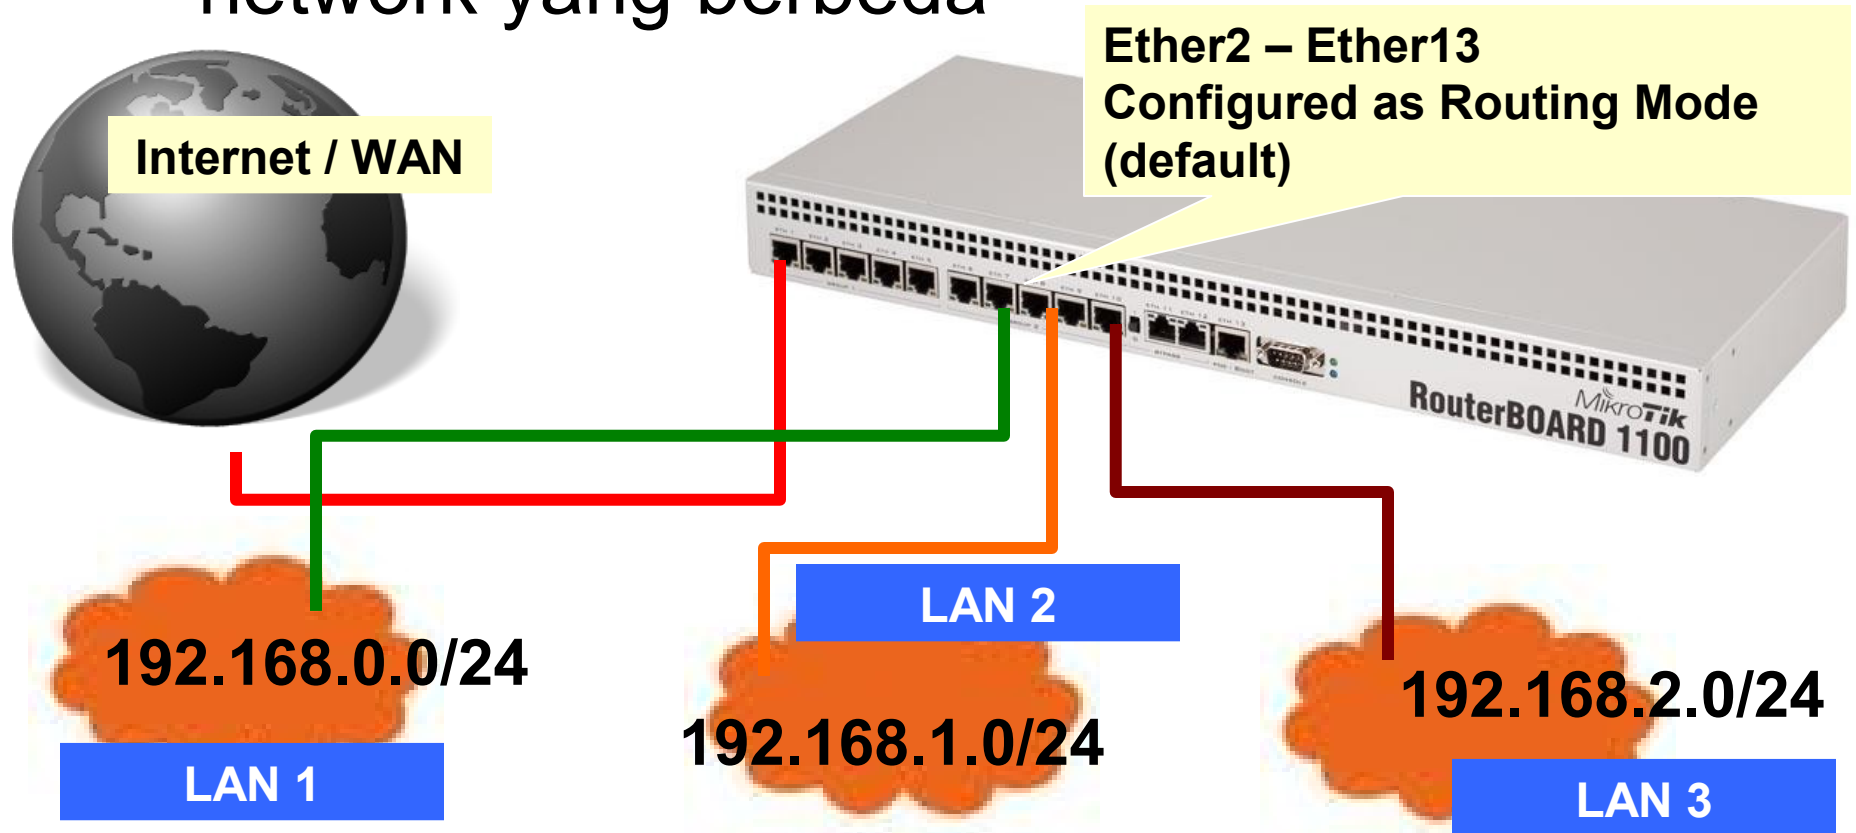

Routed Network

- **Routing** - Pengaturan jalur antar Segment Network yang berbeda berdasarkan IP Address tujuan (atau bisa juga asal).
- Bekerja pada OSI layer 3 (Network).
- Untuk menghubungkan network yang berbeda segment (subnet) memerlukan sebuah perangkat yang mampu melakukan proses routing yang disebut dengan Router.

Routing Example

- Routerboard yang berfungsi sebagai router akan menjembatani komunikasi antar network yang berbeda

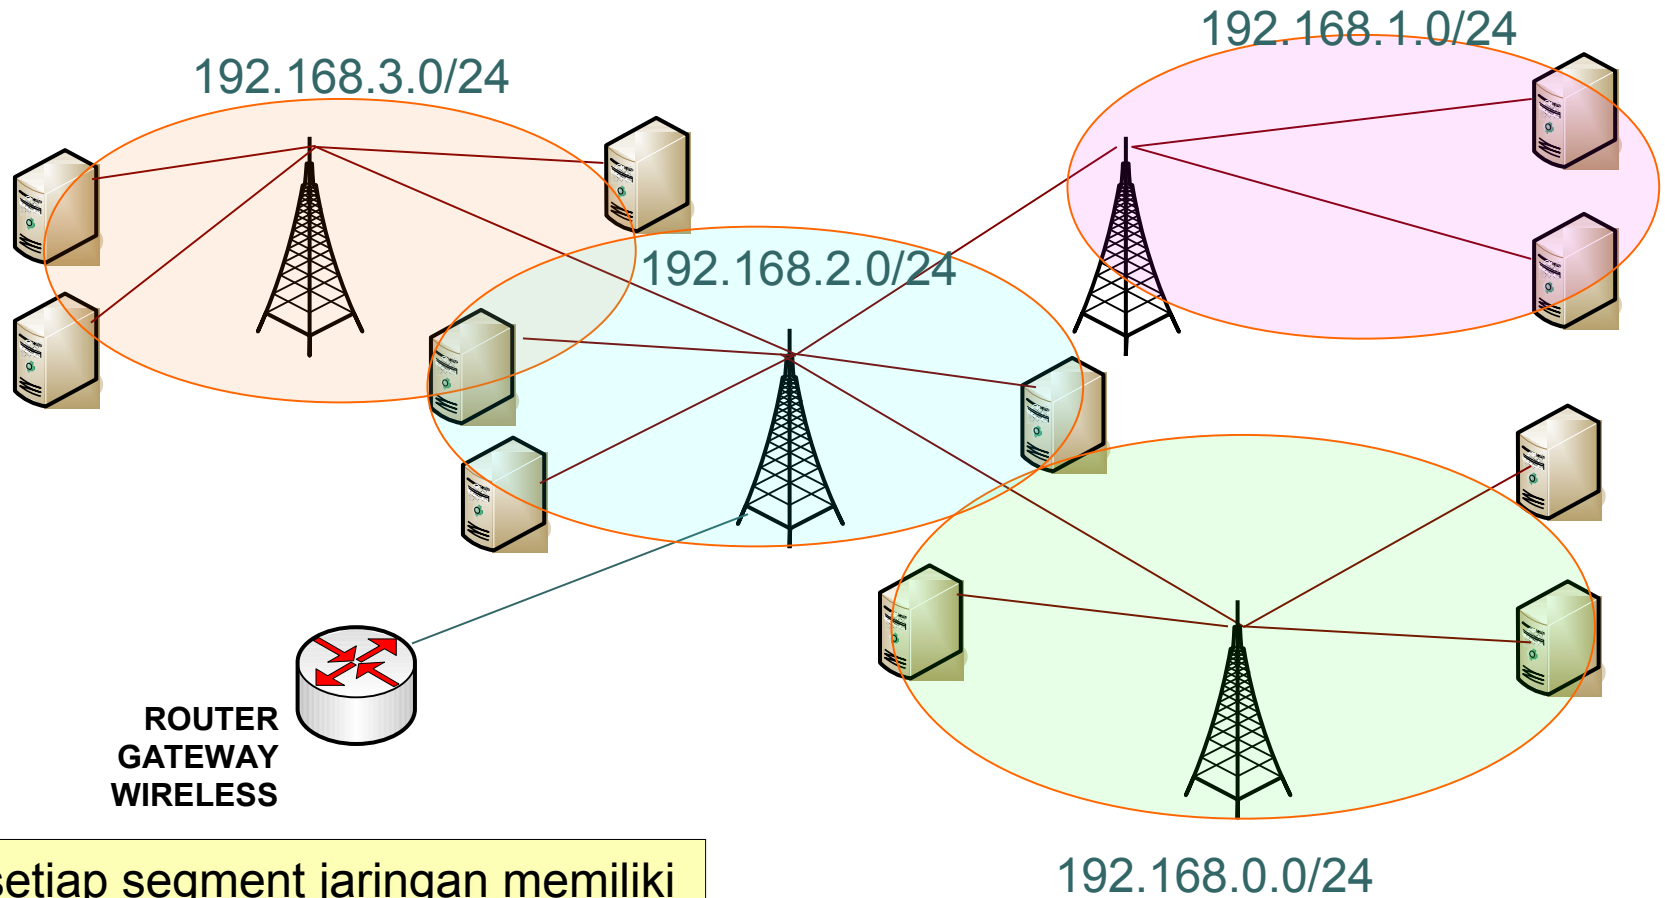

Routing Benefit

- Memungkinkan kita melakukan pemantauan dan pengelolaan jaringan yang lebih baik.
- Lebih aman (firewall filtering lebih mudah).
- Trafik broadcast (Virus) hanya terkonsentrasi di local network segmen yang sama.
- Untuk network skala besar, Routing bisa diimplementasikan menggunakan Dynamic Routing protocol (RIP/OSPF/BGP)

More Routing – for Wireless

setiap segment jaringan memiliki subnet IP address yang berbeda.

● ● ● | Tipe Informasi Routing

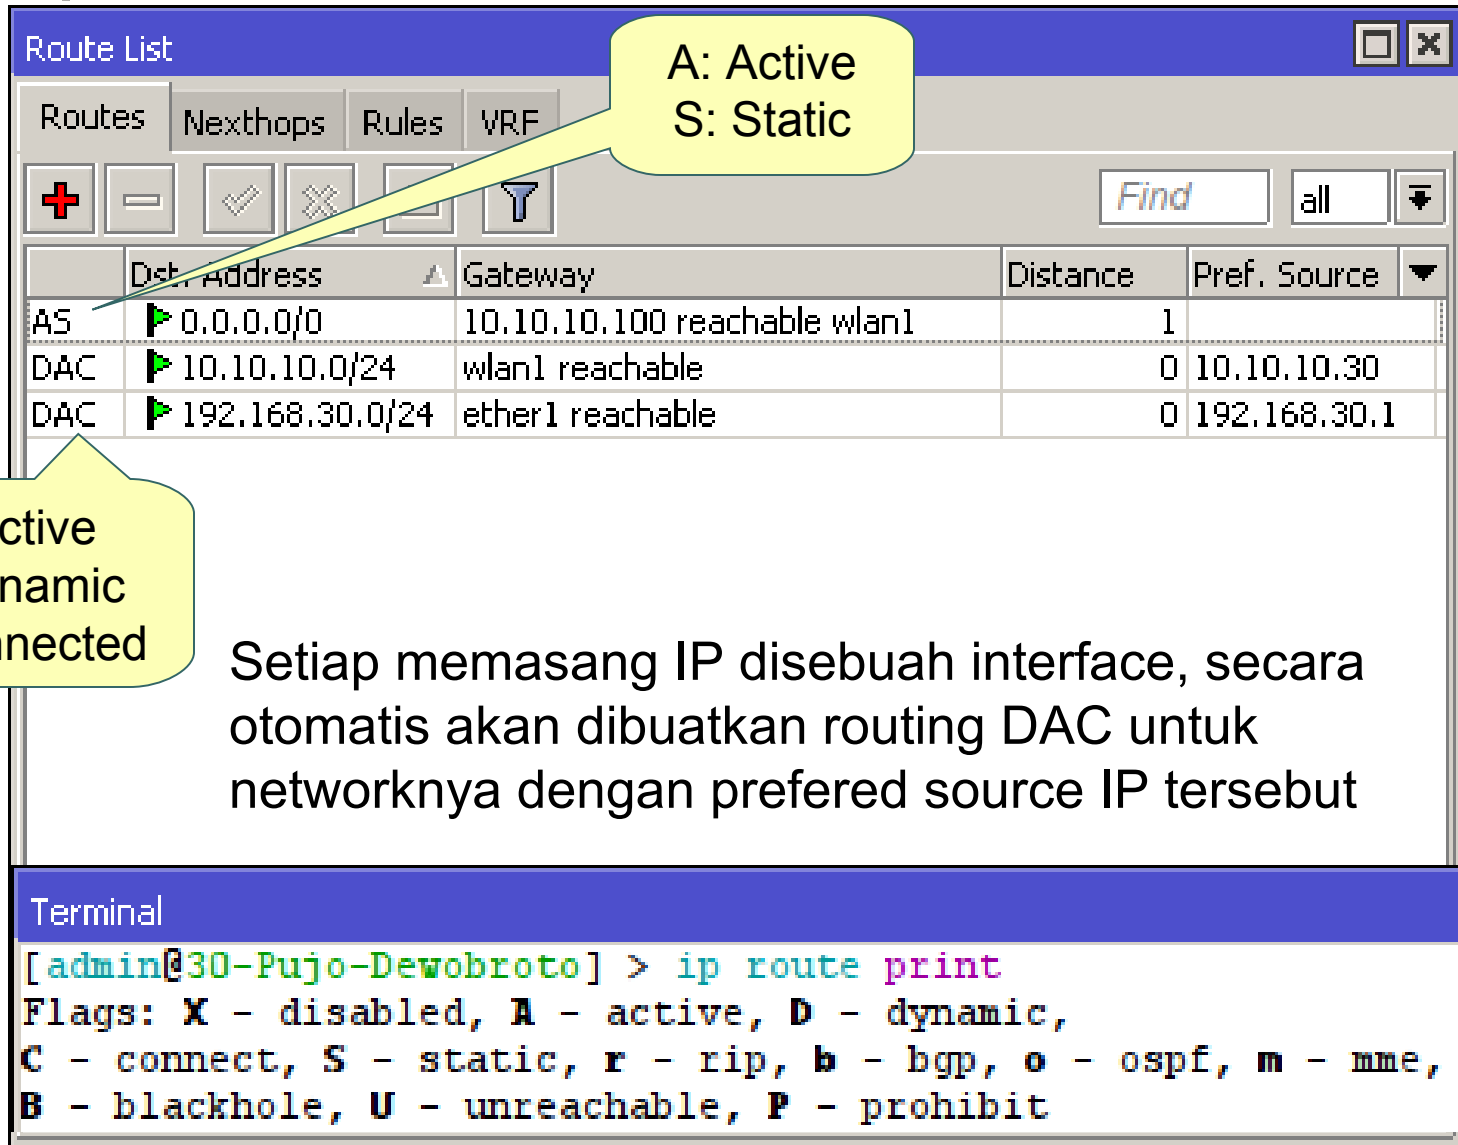

- MikroTik RouterOS tipe routing sbb:
 - **dynamic routes**
yang akan dibuat secara otomatis:
 - saat menambahkan IP Address pada interface
 - informasi routing yang didapat dari protokol routing dinamik seperti RIP, OSPF, dan BGP.
 - **static routes**
adalah informasi routing yang dibuat secara manual oleh user untuk mengatur ke arah mana trafik tertentu akan disalurkan. Default route adalah salah satu contoh static routes.

Menambahkan Routing

The image shows the Mikrotik WinBox interface. On the left, the 'Routes' menu is highlighted with a red box. A red arrow points from this menu to the '+' icon in the 'Route List' window. Another red arrow points from the '+' icon to the 'New Route' dialog box. In the 'New Route' dialog, the 'Dst. Address' field is set to '0.0.0.0/0'. The 'Type' is set to 'unicast', 'Distance' is empty, 'Scope' is '30', and 'Target Scope' is '10'. The 'Route List' window shows a table with the following data:

	Dst. Address	Gateway	Distance	Pref. Source
AS	0.0.0.0/0	10.10.10.100 reachable wlan1	1	
DAC	10.10.10.0/24	wlan1 reachable	0	10.10.10.20
DAC	192.168.30.0/24			

Tipe Routing

The screenshot shows the Mikrotik WinBox interface. The 'Route List' window is open, displaying a table of routes. A yellow callout box points to the 'A' flag in the first row, explaining that 'A' stands for Active. Another yellow callout box points to the 'DAC' flags in the second and third rows, explaining that 'D' stands for Dynamic, 'A' for Active, and 'C' for Connected. Below the route list, a terminal window shows the output of the 'ip route print' command, including a legend for the flags: X (disabled), A (active), D (dynamic), C (connect), S (static), r (rip), b (bgp), o (ospf), m (mme), B (blackhole), U (unreachable), P (prohibit).

	Dst. Address	Gateway	Distance	Pref. Source
AS	0.0.0.0/0	10.10.10.100 reachable wlan1	1	
DAC	10.10.10.0/24	wlan1 reachable	0	10.10.10.30
DAC	192.168.30.0/24	ether1 reachable	0	192.168.30.1

A: Active
D: Dynamic
C: Connected

A: Active
S: Static

Setiap memasang IP disebuah interface, secara otomatis akan dibuatkan routing DAC untuk networknya dengan prefered source IP tersebut

```
[admin@30-Pujo-Dewobroto] > ip route print
Flags: X - disabled, A - active, D - dynamic,
C - connect, S - static, r - rip, b - bgp, o - ospf, m - mme,
B - blackhole, U - unreachable, P - prohibit
```

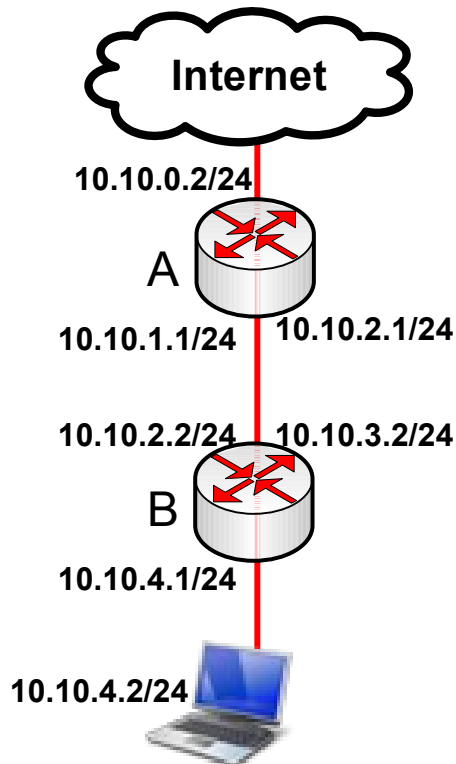

Parameter Dasar Routing

- **Destination**
 - Destination address – 222.152.211.7
 - Network mask – 202.53.246.0/24
 - 0.0.0.0/0 -> ke semua network
- **Gateway**
 - IP Address gateway, harus merupakan IP Address yang satu subnet dengan IP yang terpasang pada salah satu interface
- **Gateway Interface**
 - Digunakan apabila IP gateway tidak diketahui dan bersifat dinamik (biasanya digunakan di **ppp** interface).
- **Pref Source**
 - source IP address dari paket yang akan meninggalkan router
- **Distance**
 - Beban untuk kalkulasi pemilihan routing

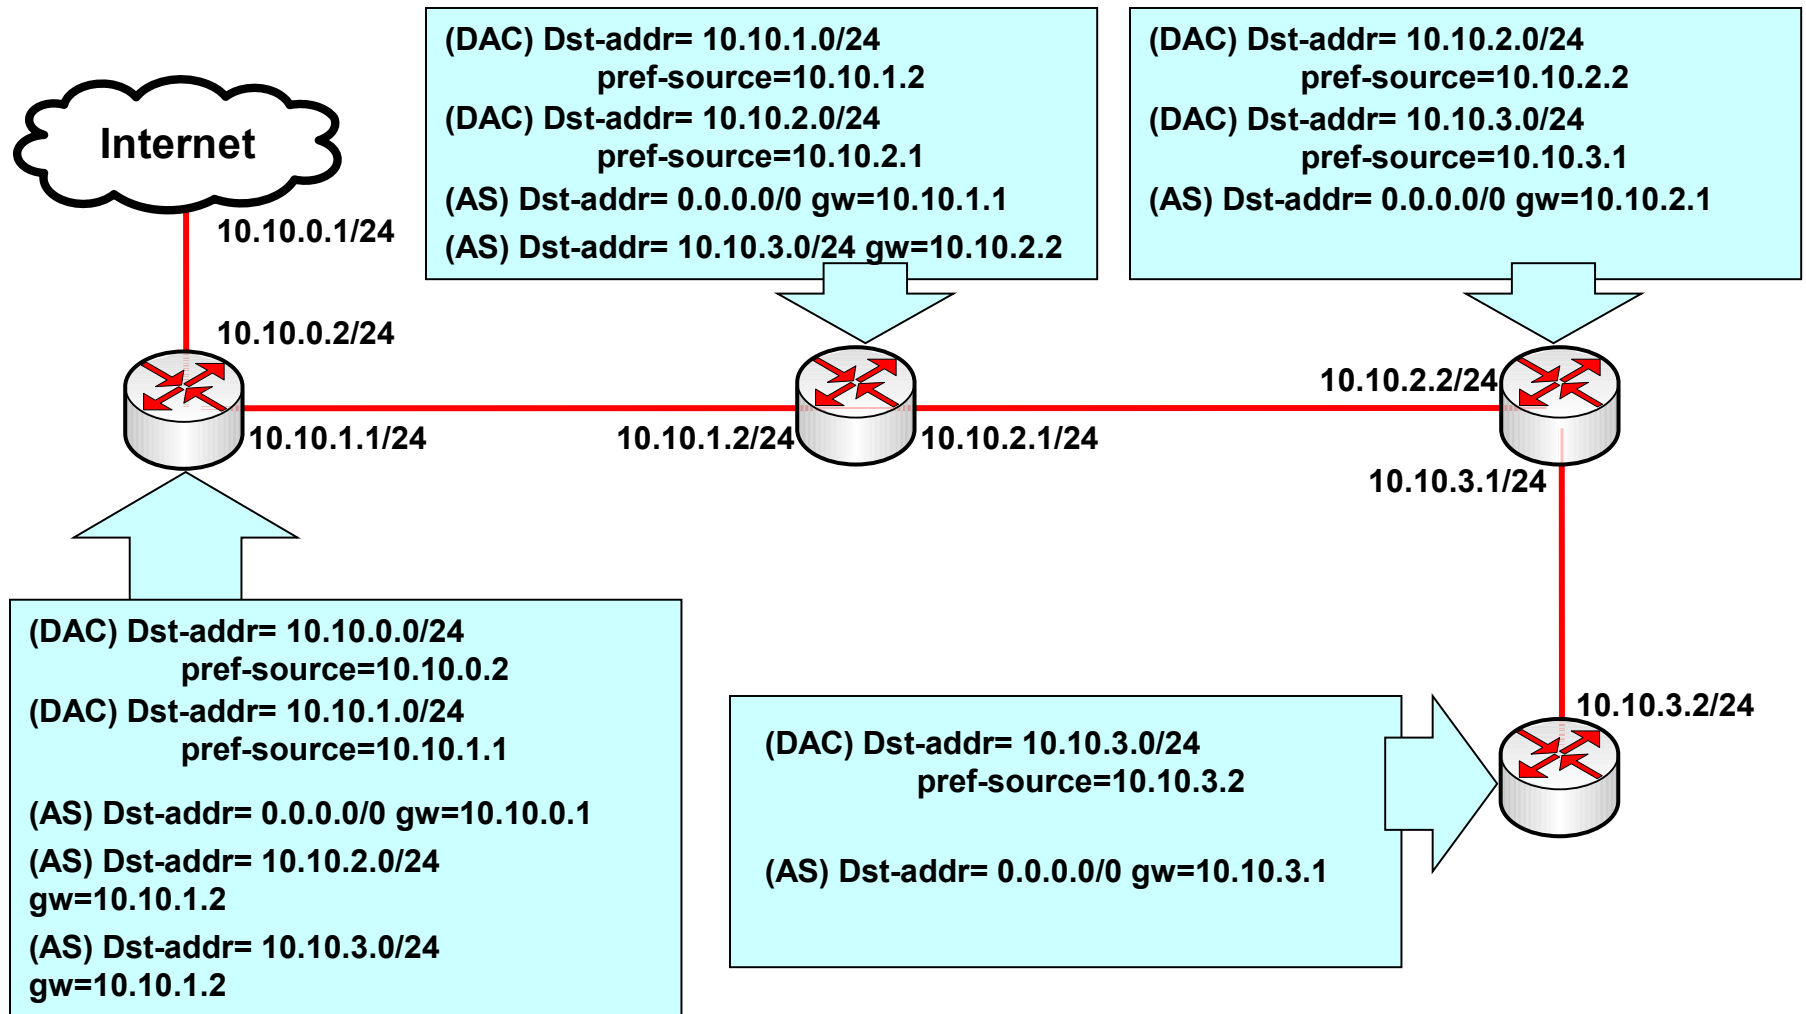

Konsep Dasar Routing

- IP Address Gateway harus merupakan IP Address dari router lawannya yang subnetnya sama dengan salah satu IP Address yang terpasang pada router kita (connect directly).

- Pada interface yang menghubungkan router A dan B, pada masing-masing router terdapat lebih dari 1 buah IP Address.
- Default gateway pada router B adalah router A
- IP Address yang menjadi default gateway router B adalah 10.10.2.1, karena IP Address tersebut berada dalam subnet yang sama dengan salah satu IP Address pada router B (10.10.2.2/24)
- Setting static route default :
 - Dst-address=0.0.0.0/0 gateway=10.10.2.1

Implementasi Konsep Routing

[LAB-1] Static Route

- Dari konfigurasi lab hari 1, semua router hanya memiliki default gateway.
- Tambahkan rule static route supaya ping bisa dilakukan antar notebook yang berbeda network.

Langkah-langkah

- Matikanlah ! src-nat masquerade
- Buatlah static route pada kedua router
- Contoh di meja 1 untuk membuat static route ke meja 2:
 - /ip route add dst-address=192.168.2.0/24 gateway=10.10.10.2
- Contoh di meja 2 untuk membuat static route ke meja 1:
 - /ip route add dst-address=192.168.1.0/24 gateway=10.10.10.1

● ● ● | Dasar Pemilihan Routing

- Untuk pemilihan routing, router akan memilih berdasarkan:
 - Rule routing yang paling spesifik tujuannya
 - Contoh: destination 192.168.0.128/26 lebih spesifik dari 192.168.0.0/24
 - Distance
 - Router akan memilih yang distance nya paling kecil
 - Round robin (random)

Contoh Pemilihan

- o Untuk koneksi dengan destination 192.168.0.1, manakah urutan prioritas rule yang digunakan?

Destination	Gateway	Distance	Prioritas
192.168.0.0/27	192.168.1.1	1	2
192.168.0.0/29	192.168.2.1	1	1
192.168.0.0/24	192.168.3.1	5	4
192.168.0.0/24	192.168.4.1	1	3

[LAB-2] Static Route

192.168.X.2/24

10.10.10.100/24

WLAN1:10.10.10.X/24

ETHER3:
10.Y.1.1/24

ETHER2:
10.Y.1.2/24

Buatlah konfigurasi berikut dan lakukan pengaturan static route sehingga semua laptop dapat terkoneksi ke internet dan semua laptop dapat melakukan ping ke laptop lainnya. Matikanlah src-nat/masquerade.

ETHER3:
10.Y.2.1/24

ETHER3:
10.Y.3.1/24

ETHER2:
10.Y.3.2/24

ETHER2:
10.Y.2.2/24

192.168.X.2/24

192.168.X.2/24

192.168.X.2/24

Dynamic Routing

- Karena sebuah jaringan memiliki besar skala yang berbeda satu sama lain, maka sangat memungkinkan jika jaringan tersebut berkembang menjadi besar sekali. Maka penggunaan routing menjadi sangat penting dan kritis.
- **Informasi routing haruslah tepat** dan kesalahan melakukan distribusi informasi routing harus diminimalisasi sedikit mungkin.
- Sangatlah tidak nyaman jika harus menuliskan rule routing untuk puluhan bahkan ratusan router secara static.

● ● ● | **Very Big Network**

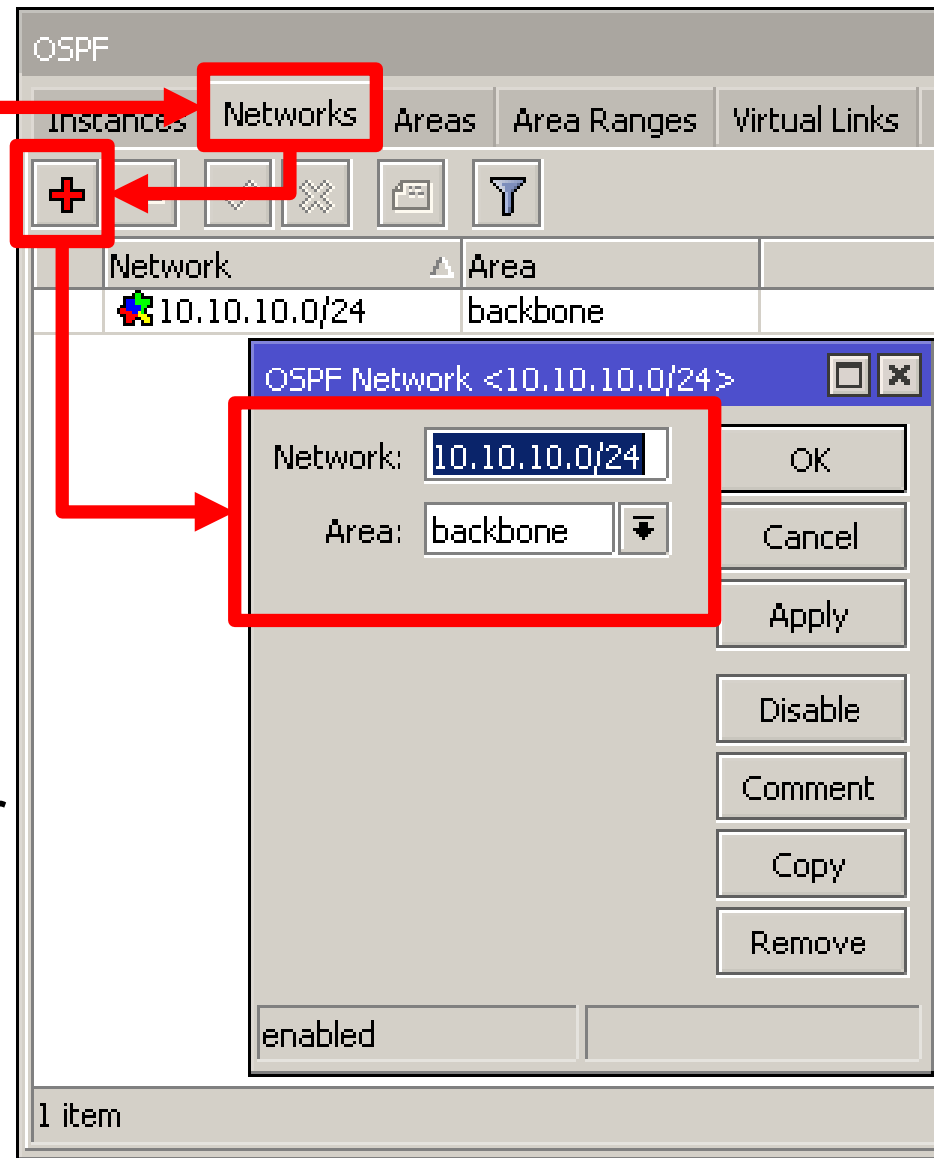

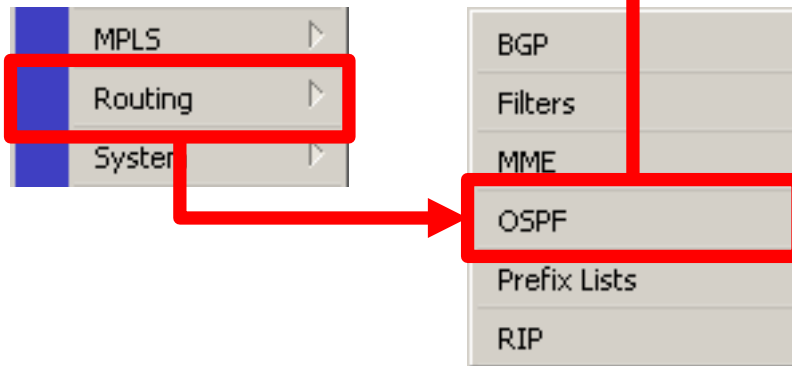

Dynamic Routing - OSPF

- **OSPF** merupakan sebuah routing protokol yang dapat mendistribusikan informasi routing secara otomatis.
- OSPF juga merupakan *routing* protokol yang menggunakan konsep hirarki *routing*, dengan kata lain OSPF juga mampu membagi-bagi jaringan menjadi beberapa tingkatan. Tingkatan-tingkatan ini diwujudkan dengan menggunakan sistem pengelompokan yaitu **area**.

[LAB-3] Konfigurasi OSPF

OSPF - Configuration

OSPF mulai bekerja setelah kita mendefinisikan di network mana kita akan saling bertukar informasi routing

Firewall

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

Firewall ?

- Firewall diposisikan antara jaringan lokal dan jaringan publik, bertujuan melindungi komputer dari serangan, dan secara efektif mengontrol koneksi data menuju, dari, dan melalui router.

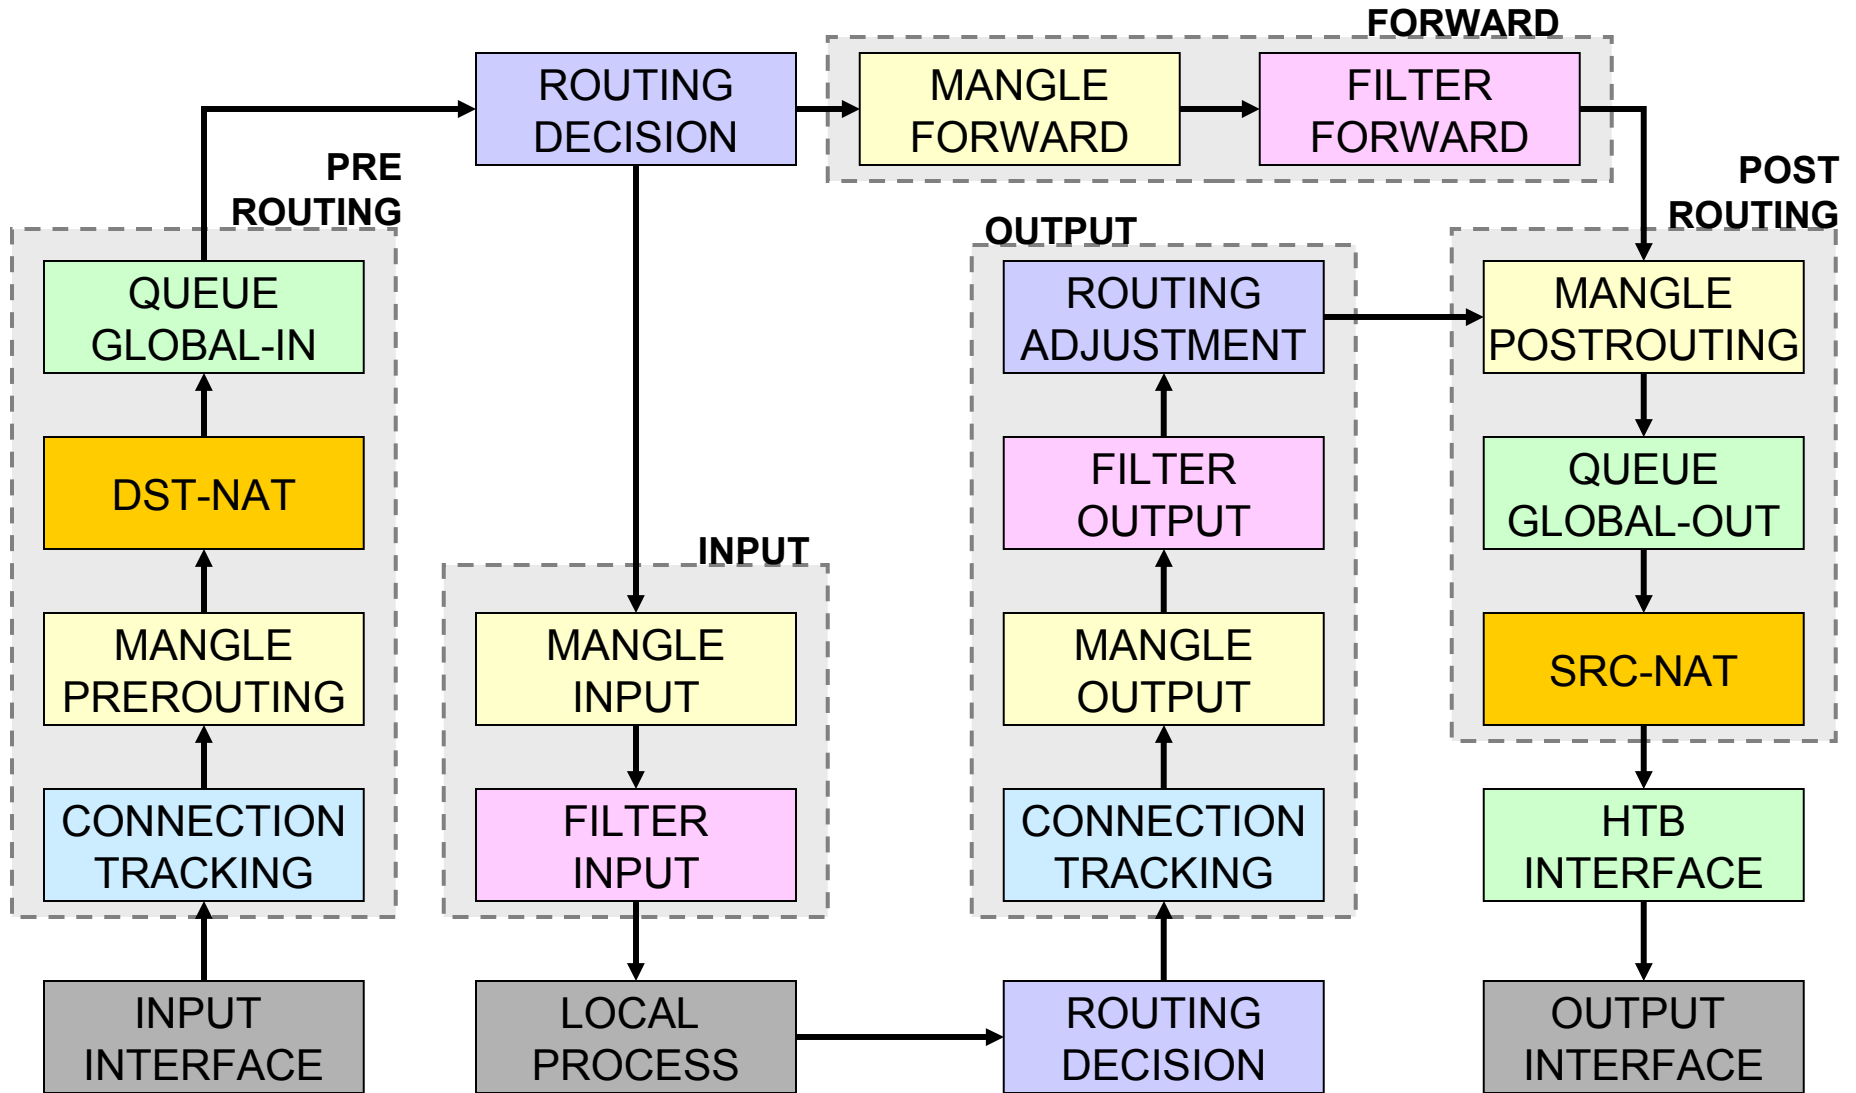

Mikrotik Firewall - Features

- Rules
- NAT (source-nat and destination-nat)
- Mangle
- Address List
- **Layer 7 Protocol (baru di versi 3)**
- Service Ports
- Connections
 - For monitoring only

Traffic Flow (Aliran Data)

- Setiap paket data memiliki asal (source) dan tujuan (destination).
- Traffic flow bisa dibedakan menjadi 3 kategori, dilihat dari sudut pandang router.
 - **Dari Luar router menuju ke luar router lagi**
 - Contoh : traffic client browsing ke internet
 - **Dari luar router menuju ke dalam router itu sendiri (Local process).**
 - Contoh : traffic winbox ke router
 - **Dari dalam router (local process) menuju ke luar router.**
 - Contoh : traffic ping dari new terminal winbox

Simple Packet Flow

Posisi Chain / Parent

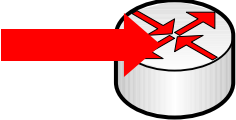

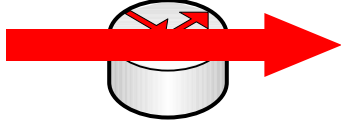

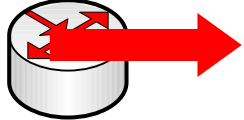

From	To	Mangle	Firewall	Queue
Outside	Router/ Local Process	Prerouting		Global-In
		Input	Input	Global-Total
Router/ Local Process	Outside	Output	Output	Global-Out
		Postrouting		Global-Total
				Interface
Outside	Outside	Prerouting		Global-In
		Forward	Forward	Global-Out
		Postrouting		Global-Total
				Interface

Firewall Filters – Blocking Rules

- Adalah cara untuk memfilter paket, dilakukan untuk meningkatkan keamanan jaringan, dan mengatur flow data dari, ke client, ataupun router
- Pembacaan rule filter dilakukan dari atas ke bawah secara berurutan. Jika melewati rule yang kriterianya sesuai akan dilakukan action yang ditentukan, jika tidak sesuai, akan dianalisa ke baris selanjutnya.

Chain pada Filter

			
Prerouting	not implemented	not implemented	not implemented
Input	yes	no	no
Forward	no	yes	no
Output	no	no	yes
Postrouting	not implemented	not implemented	not implemented

Connection State

- Setiap paket data yang lewat memiliki status:
 - **Invalid** – paket tidak dimiliki oleh koneksi apapun, tidak berguna
 - **New** – paket yang merupakan pembuka sebuah koneksi/paket pertama dari sebuah koneksi
 - **Established** – merupakan paket kelanjutan dari paket dengan status new.
 - **Related** – paket pembuka sebuah koneksi baru, tetapi masih berhubungan dengan koneksi sebelumnya.

Connection State

Firewall

New

Established

Related

Invalid

Action Filter

- **accept** – paket diterima dan tidak melanjutkan membaca baris berikutnya
- **drop** – menolak paket secara diam-diam (tidak mengirimkan pesan penolakan ICMP)
- **reject** – menolak paket dan mengirimkan pesan penolakan ICMP
- **tarbit** – menolak, tetapi tetap menjaga TCP connections yang masuk (membalas dengan SYN/ACK untuk paket TCP SYN yang masuk)
- **log** – menambahkan informasi paket data ke log

Filter Rules

The image shows a sequence of steps in Mikrotik WinBox for configuring a Firewall Filter Rule. On the left, a sidebar menu has 'IP' and 'Firewall' highlighted with red boxes. Red arrows point from 'IP' to the 'Firewall' menu item, and from 'Firewall' to the '+' icon in the Firewall window. The Firewall window shows tabs for Filter Rules, NAT, Mangle, Service Ports, and Connections. The 'Filter Rules' tab is active, and the '+' icon is highlighted with a red box. A red arrow points from this icon to the 'New Firewall Rule' dialog box. The dialog box has tabs for General, Advanced, Extra, Action, and Statistics. The 'General' tab is selected, and the 'Chain' dropdown is set to 'forward'. Other fields like Src. Address, Dst. Address, Protocol, Src. Port, Dst. Port, Any. Port, P2P, In. Interface, and Out. Interface are empty. On the right side of the dialog, there are buttons for OK, Cancel, Apply, Disable, Comment, Copy, Remove, Reset Counters, and Reset All Counters.

[LAB-2] Simple Blocking

- Blok semua invalid connection ke router
- Accept koneksi related dan established
- Blok koneksi winbox ke router yang masuk melalui interface public (wlan)
- Blok koneksi dari laptop ke ip tertentu, contoh: 10.10.10.100

IP Address List

◦ Kita dapat melakukan pengelompokan IP Address dengan **Address List**

Address List bisa digunakan sebagai src. Address atau dst. Address pada firewall Filter, Mangle dan NAT

Network Address Translation (NAT)

- NAT digunakan untuk melakukan pengubahan baik src-address ataupun dst-address.
- Setelah paket data pertama dari sebuah koneksi terkena NAT, maka paket berikutnya pada koneksi tersebut juga akan terkena NAT.
- NAT akan diproses terurut mulai baris paling atas hingga ke bawah.

Firewall NAT

The NAT router translates traffic coming into and leaving the private network

src-nat and masquerade

- Untuk menyembunyikan IP Address lokal dan menggantikannya dengan IP Address publik yang sudah terpasang pada router
- **src-nat**
 - Kita bisa memilih IP Address publik yang digunakan untuk menggantikan.
- **masquerade**
 - Secara otomatis akan menggunakan IP Address pada interface publik.
 - Digunakan untuk mempermudah instalasi dan bila IP Address publik pada interface publik menggunakan IP Address yang dinamik (misalnya DHCP, PPTP atau EoIP)

● ● ● | dst-nat and redirect

- Untuk melakukan penggantian IP Address tujuan, atau mengarahkan koneksi ke localhost.
- **dst-nat**
 - Kita bisa mengganti IP Address dan port tujuan dari sesuatu koneksi.
- **redirect**
 - Untuk mengalihkan koneksi yang tadinya melwati router, dan dialihkan menuju ke localhost

Konsep Proxy

- Pada semua level routers, baik yang diinstall pada PC maupun yang diinstall pada routerboard, kita bisa mengaktifkan fitur proxy
- Koneksi tanpa proxy

- Koneksi dengan proxy

Fitur Proxy di RouterOS

- **Regular HTTP proxy**
- **Transparent proxy**
 - Dapat berfungsi juga sebagai transparan dan sekaligus normal pada saat yang bersamaan
- **Access list**
 - Berdasarkan source, destination, URL dan requested method
- **Cache Access list**
 - Menentukan objek mana yang disimpan pada cache
- **Direct Access List**
 - Mengatur koneksi mana yang diakses secara langsung dan yang melalui proxy server lainnya
- **Logging facility**

● ● ● | [LAB-5] dst-nat & local proxy

- Aktifkanlah service **web-proxy** pada router Anda.
- Lakukanlah pengalihan koneksi secara **transparan** sehingga semua koneksi HTTP akan **melalui web proxy** pada router.

Mengaktifkan Proxy

The diagram illustrates the steps to activate a proxy in Mikrotik WinBox. It starts with the 'IP' menu item highlighted in red. A red arrow points to the 'Web Proxy' option, which is also highlighted in red. Another red arrow points to the 'Web Proxy Settings' button in the main window, which is highlighted in red. A final red arrow points to the 'Enabled' checkbox in the 'Web Proxy Settings' dialog box, which is also highlighted in red. The 'Port' field is set to 8080.

Redirect TCP-80

The image shows the Mikrotik WinBox interface for configuring a NAT rule. The main window is titled "NAT Rule <80,3128,8080>". It has several tabs: General, Advanced, Extra, Action, and Statistics. The "General" tab is active, showing the following fields:

- Chain: **dstnat**
- Src. Address: (empty)
- Dst. Address: (empty)
- Protocol: **6 (tcp)**
- Src. Port: (empty)
- Dst. Port: **80,3128,8080**
- Any. Port: (empty)
- In. Interface: **ether1**
- Out. Interface: (empty)

Overlaid on this is a smaller window titled "New NAT Rule". It also has tabs: General, Advanced, Extra, Action, and Statistics. The "Action" tab is active, showing:

- Action: **redirect**
- To Ports: **8080**

Red lines connect the "Chain" field in the main window to the "Chain" field in the "New NAT Rule" window, and the "In. Interface" field in the main window to the "To Ports" field in the "New NAT Rule" window. The "New NAT Rule" window also has buttons for OK, Cancel, and Apply.

Akses

- Mengatur hak akses client (Access Filter)

The screenshot displays the Mikrotik WinBox interface for configuring a Web Proxy Rule. The 'New Web Proxy Rule' dialog is open, showing the following configuration:

- Src. Address: [Empty]
- Dst. Address: [Empty]
- Dst. Port: [Empty]
- Local Port: [Empty]
- Dst. Host: [Empty]
- Path: /*mp3
- Method: [Empty]
- Action: deny
- Redirect To: [Empty]
- Hits: 0

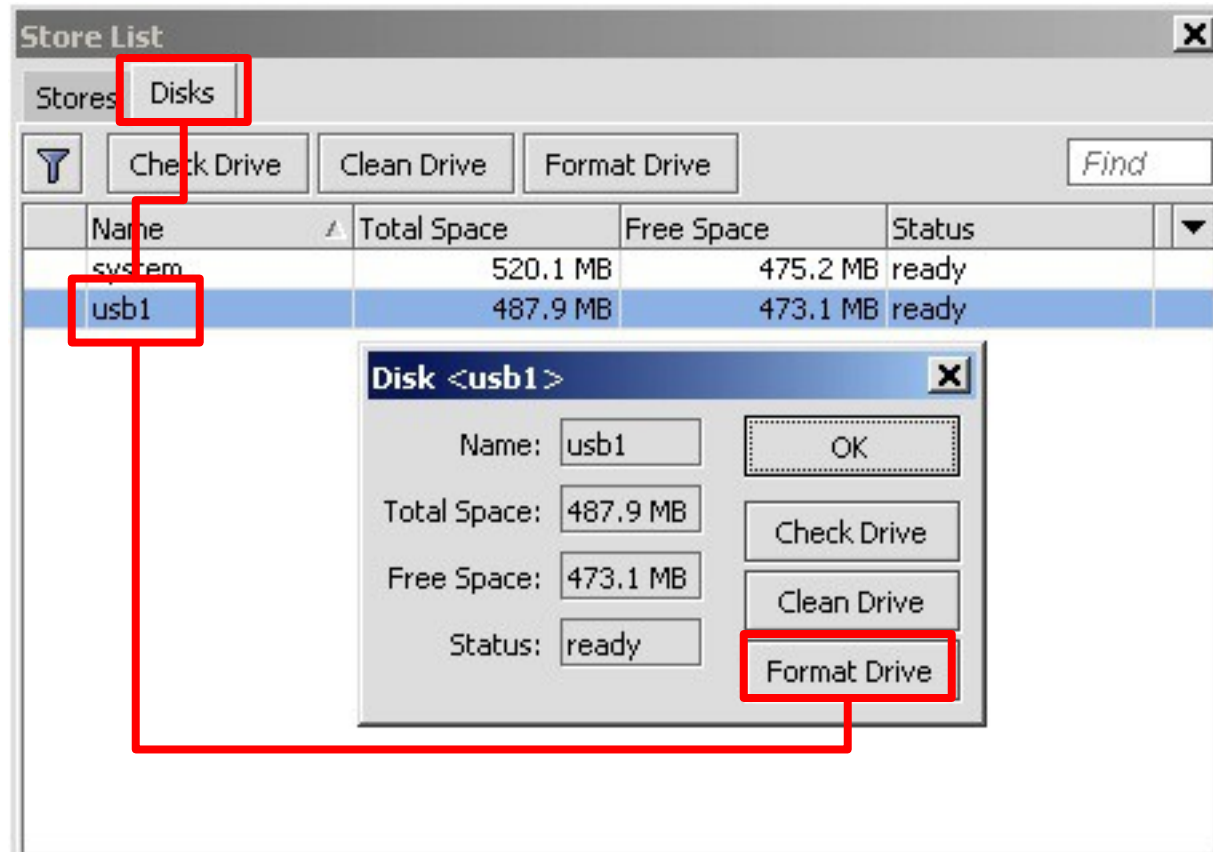

The 'Web Proxy Rule <>' dialog is also visible, showing the same configuration:

- Src. Address: [Empty]
- Dst. Address: [Empty]
- Dst. Port: [Empty]
- Local Port: [Empty]
- Dst. Host: *yahoo*
- Path: [Empty]
- Method: [Empty]
- Action: deny
- Redirect To: [Empty]
- Hits: 0

A red circle highlights the '+' button in the 'Access' tab, and red lines connect it to the configuration fields in the 'New Web Proxy Rule' dialog.

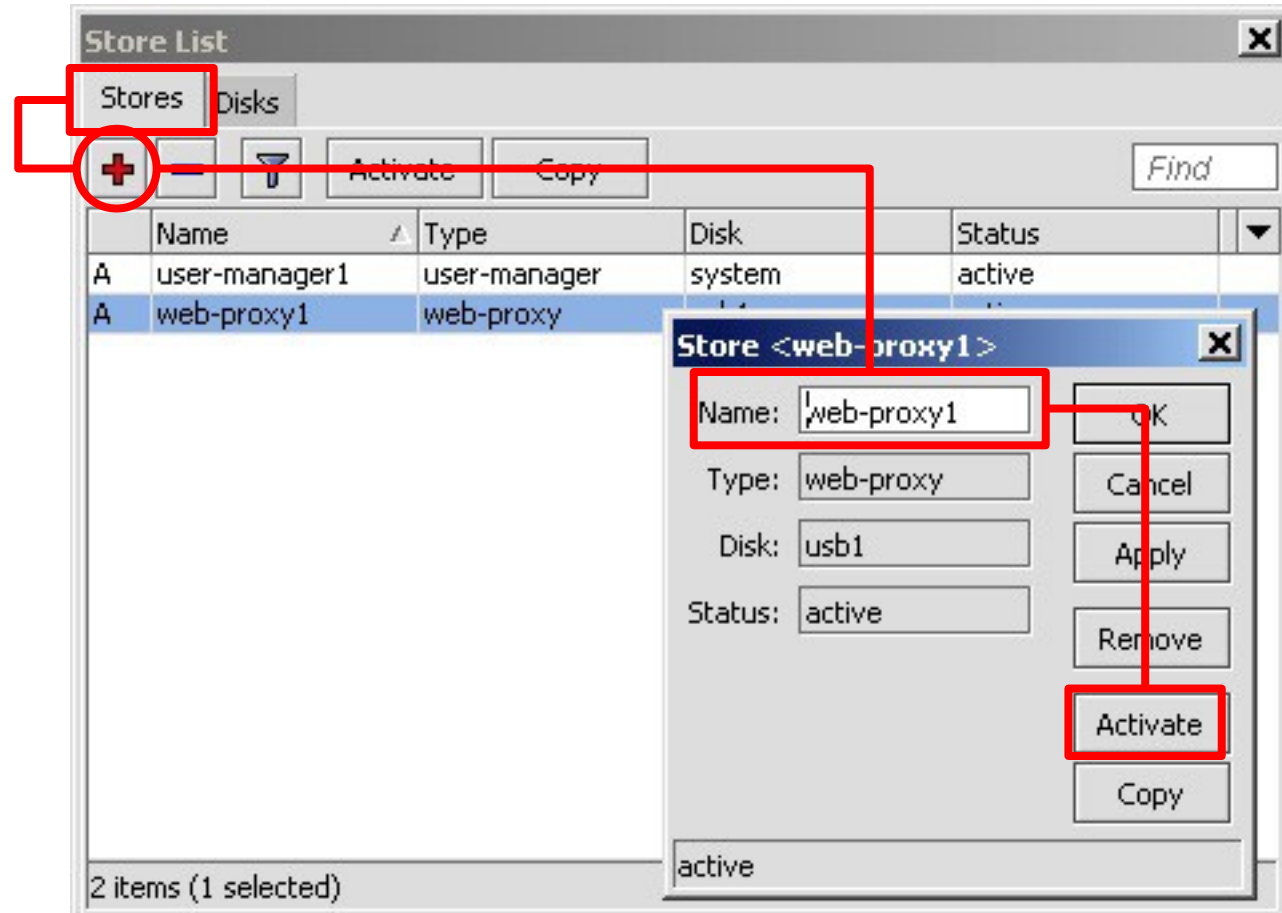

System Store - Disk

- Penyimpanan Cache
 - System Disk
 - Hardisk
 - Flash memory
- Format terlebih dahulu

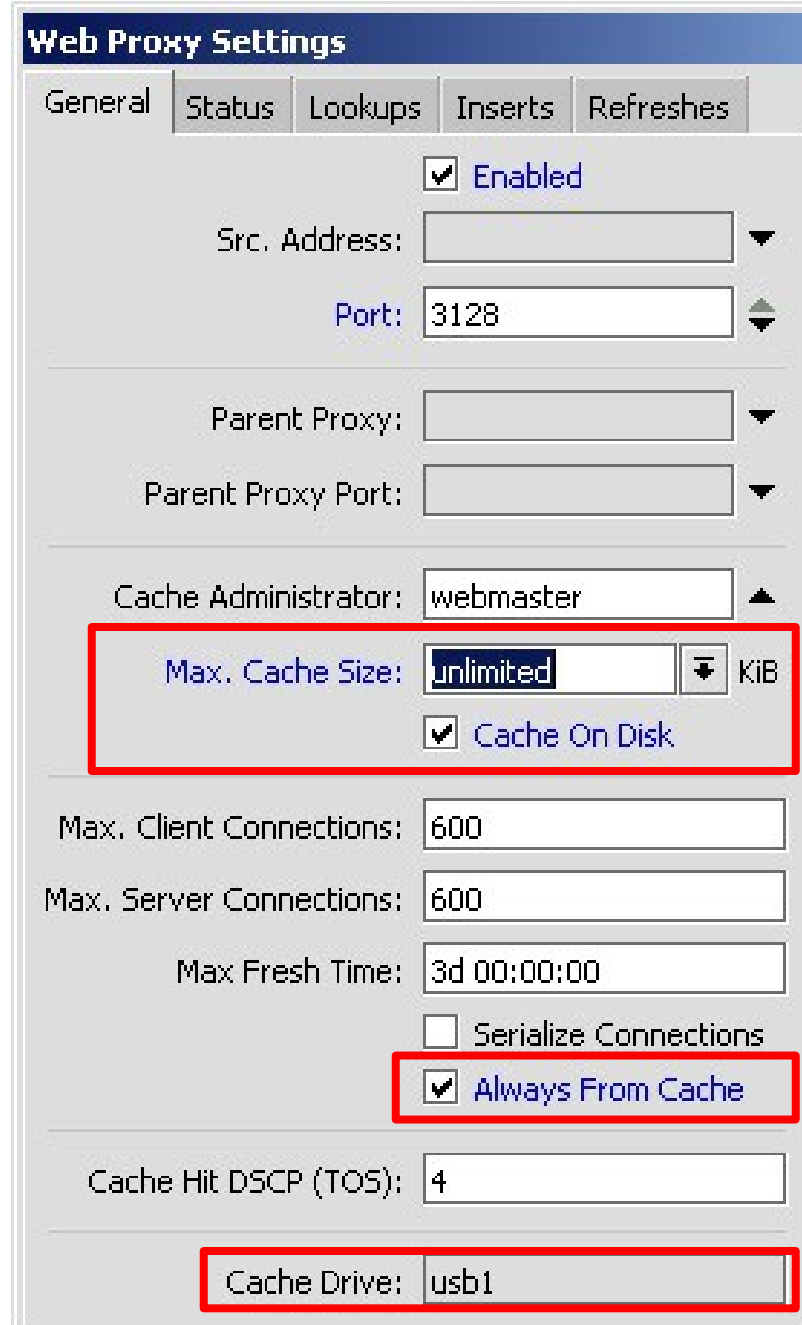

System Store – Store Mount

- Setelah diformat Disk di mount untuk service proxy.

Proxy - Cache

- Aktifkan “Cache On Disk” untuk mengaktifkan Mikrotik Proxy Cache.
- Perhatikan pada parameter “Cache Drive” sudah menggunakan USB disk.

The screenshot shows the Mikrotik Web Proxy Settings configuration page. The 'General' tab is selected. The following fields and options are highlighted with red boxes:

- Max. Cache Size:** Set to 'unlimited' KIB.
- Cache On Disk:** Checked.
- Always From Cache:** Checked.
- Cache Drive:** Set to 'usb1'.

Other visible settings include:

- Enabled:** Checked.
- Src. Address:** (Empty)
- Port:** 3128
- Parent Proxy:** (Empty)
- Parent Proxy Port:** (Empty)
- Cache Administrator:** webmaster
- Max. Client Connections:** 600
- Max. Server Connections:** 600
- Max Fresh Time:** 3d 00:00:00
- Serialize Connections:** Unchecked
- Cache Hit DSCP (TOS):** 4

Quality of Service

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

Quality of Service

- **QoS** tidak selalu berarti pembatasan bandwidth
- Adalah cara yang digunakan untuk **mengatur penggunaan bandwidth yang ada secara rasional.**
- Qos bisa digunakan juga untuk mengatur prioritas berdasarkan parameter yang diberikan, menghindari terjadinya trafik yang memonopoli seluruh bandwidth yang tersedia.

Quality of Service

- Kita tidak dapat melakukan pembatasan trafik yang masuk ke suatu interface.
- Satu-satunya cara untuk mengontrol adalah dengan buffering (menahan sementara), atau kalau melampaui limit buffer, akan dilakukan drop pada paket tersebut.
- Pada TCP, paket yang didrop akan dikirimkan ulang sehingga tidak ada kehilangan paket data.
- Cara termudah melakukan queue di RouterOS adalah menggunakan simple queue.

Simple Queue

- Dengan simple queue, kita dapat melakukan:
 - Melimit tx-rate client (upload)
 - Melimit rx-rate client (download)
 - Melimit tx+rx-rate client (akumulasi)

Burst

- Burst adalah salah satu cara menjalankan QoS
- Burst memungkinkan penggunaan data-rate yang melebihi max-limit untuk periode waktu tertentu
- Jika data rate lebih kecil dari **burst-threshold**, burst dapat dilakukan hingga data-rate mencapai **burst-limit**
- Setiap detik, router mengkalkulasi data rate rata-rata pada suatu kelas queue untuk periode waktu terakhir sesuai dengan **burst-time**
- **Burst time** tidak sama dengan waktu yang diijinkan untuk melakukan burst.

Contoh Burst (1)

- **Max-limit=256kbps, burst-time=8,**
burst-threshold=192kbps, burst-limit=512kbps.

Contoh Burst (1)

- Pada awalnya, data rate rata-rata dalam 8 detik terakhir adalah 0 kbps. Karena data rate rata-rata ini lebih kecil dari burst-threshold, maka burst dapat dilakukan.
- Setelah 1 detik, data rate rata-rata adalah $(0+0+0+0+0+0+0+512)/8=64\text{kbps}$, masih lebih kecil dari **burst-threshold**. Burst dapat dilakukan.
- Demikian pula untuk detik kedua, data rate rata-rata adalah $(0+0+0+0+0+0+512+512)/8=128\text{kbps}$.
- Setelah 3 detik, tibalah pada saat di mana data rate rata-rata lebih besar dari **burst-threshold**. Burst tidak dapat lagi dilakukan, dan data rate turun menjadi **max-limit** (256kbps).

Contoh Burst (2)

[LAB-2] Simple Queue 2

- Make a simple queue for your laptop
 - Downstream max-limit=256k
 - Upstream max-limit=128k
- Try Using Burst
 - Burst-limit=1M
 - Burst-threshold=512K
 - Burst-time=30s

Simple Queue – Bandwidth Test

- **Address :**
 - Ip address test server
- **Direction :**
 - Upload
 - Download
 - Upload & Download
- **Protocol :**
 - TCP / UDP
- **User & Password :**
 - Autentikasi

The screenshot shows the MikroTik Bandwidth Test v0.1 application window. The title bar reads "MikroTik Bandwidth Test v0.1". The MikroTik logo is visible in the top right corner. The interface contains several input fields and buttons:

- Address:** 10.10.10.30
- Protocol:** tcp
- Local Tx Size:** 1500 bytes
- Remote Tx Size:** 1500 bytes
- Direction:** both
- Local Tx Speed:** bps
- Remote Tx Speed:** bps
- User:** admin
- Password:** (empty field)
- Random Data

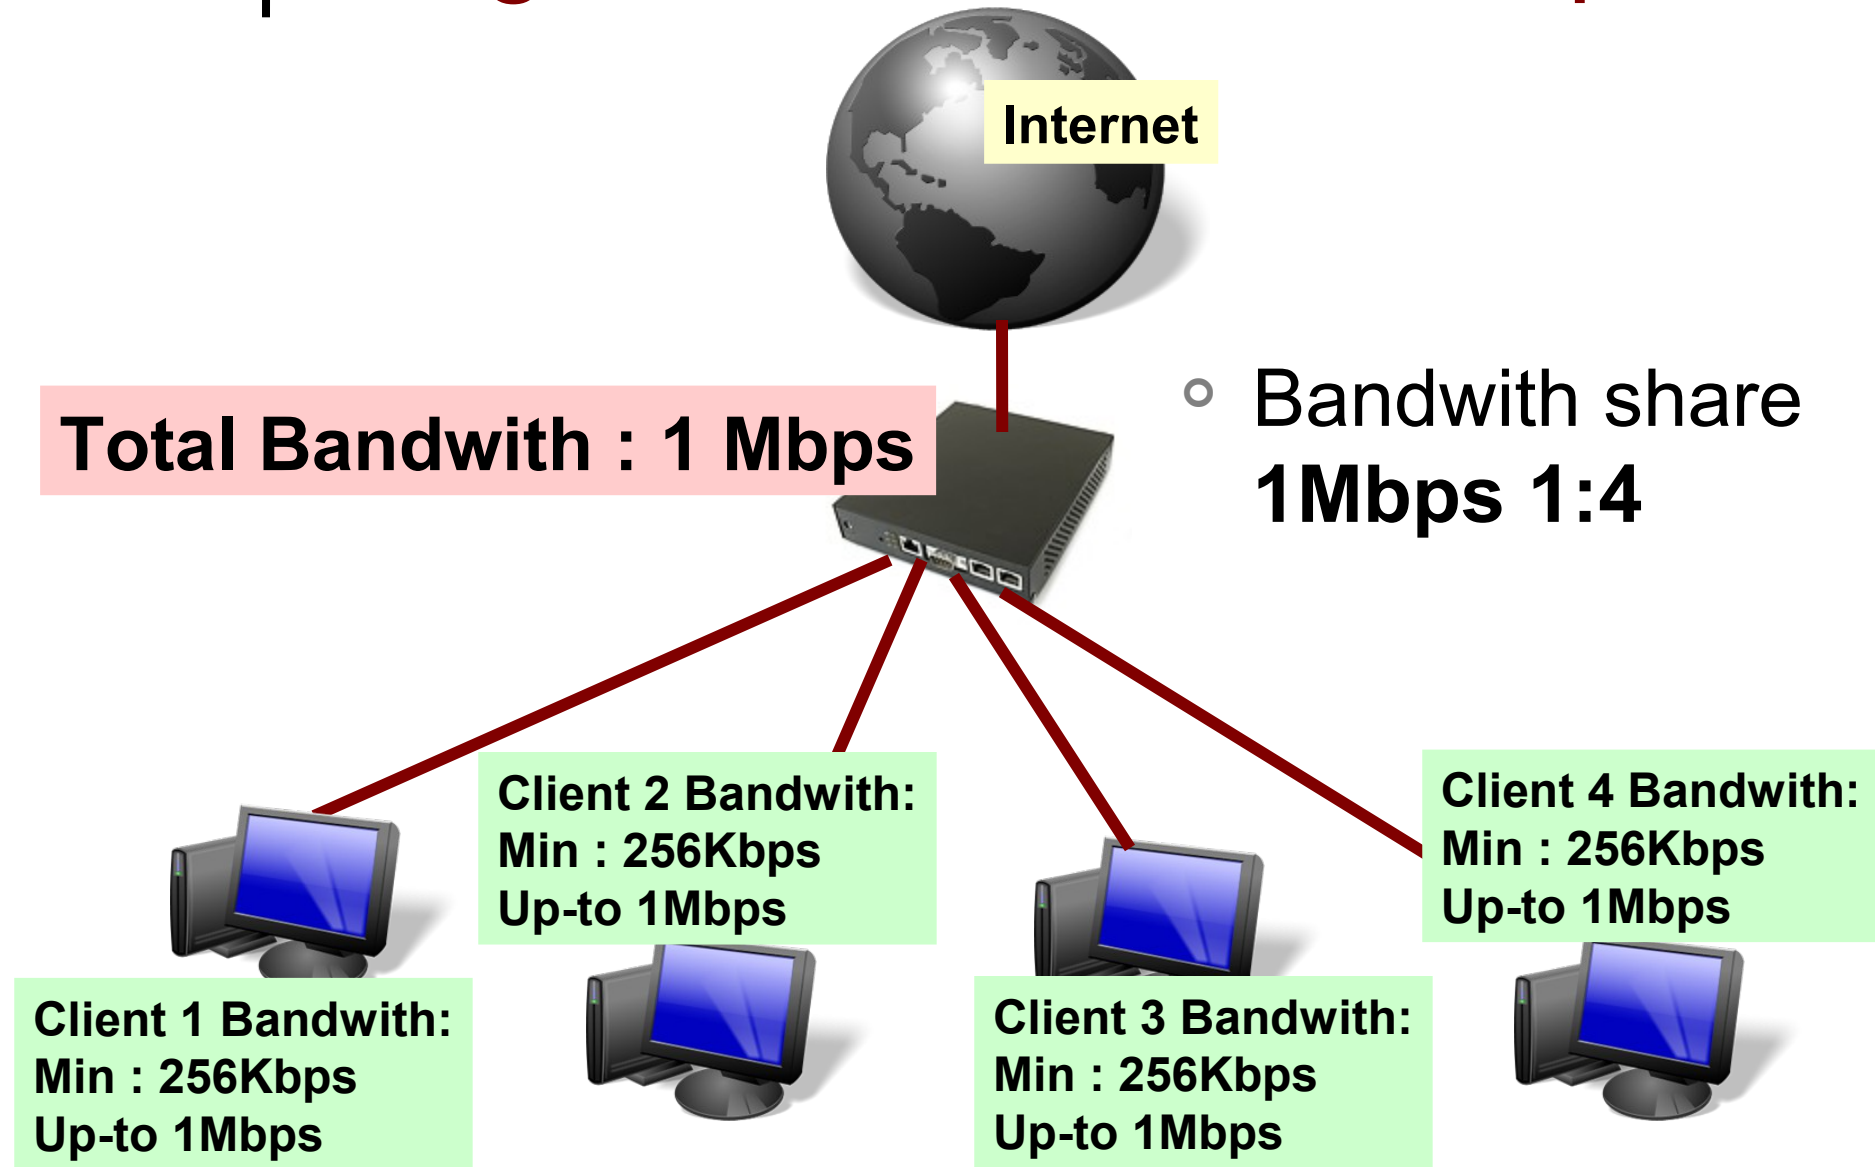

On the right side, there is a vertical stack of buttons: Start, Settings..., Help..., Save (with a dropdown arrow), Load #1, Load #2, Load #3, Load #4, and Load #5.

Staged Limitation

- Pada RouterOS, dikenal 2 buah limitasi:
 - **CIR** (Committed Information Rate)
 - dalam keadaan terburuk, client akan mendapatkan bandwidth sesuai dengan “**limit-at**” (dengan asumsi bandwidth yang tersedia cukup untuk CIR semua client)
 - **MIR** (Maximal Information Rate)
 - jika masih ada bandwidth yang tersisa setelah semua client mencapai “**limit-at**”, maka client bisa mendapatkan bandwidth tambahan hingga “**max-limit**”

Staged Limitation - Example

[LAB-3] Staged Queue - Parent

- Parent queue harus dibuat terlebih dahulu untuk membantu router menentukan Total bandwidth yang dimiliki.

New Simple Queue

General | Advanced | Statistics | Traffic | Total | Total Statistics

Target Upload Target Download

Max Limit: bits/s

▲ Burst

Burst Limit: bits/s

Burst Threshold: bits/s

Burst Time: s

▼ Time

[LAB-3] Staged Queue - Child

- Child queue baru dibuat untuk melimit tiap clientnya.
- Untuk pembagian bandwithnya adalah :
 - Limit-At = Total Bandwith / Jumlah Client**
 - Max-Limit = < Total Bandwith**
- Jika jumlah client terlalu banyak maka bisa digunakan perhitungan :
 - Limit-At = Total Bandwith / jumlah rata-rata maksimal client yang aktif**
 - Max-Limit = TotalBandwith / jumlah rata-rata minimal client yang aktif**

Name	Parent	Packet Mark	Priority	Limit At ...	Max Limit...	Avg. Rate

PCQ (Per Connection Queue)

- Untuk kondisi client yang sangat banyak dan sangat merepotkan jika harus membuat banyak rule maka bisa menggunakan metode PCQ :
 - PCQ dibuat sebagai penyempurnaan SFQ.
 - PCQ bisa **membatasi bandwidth client secara merata**
 - PCQ membutuhkan memori yang cukup besar

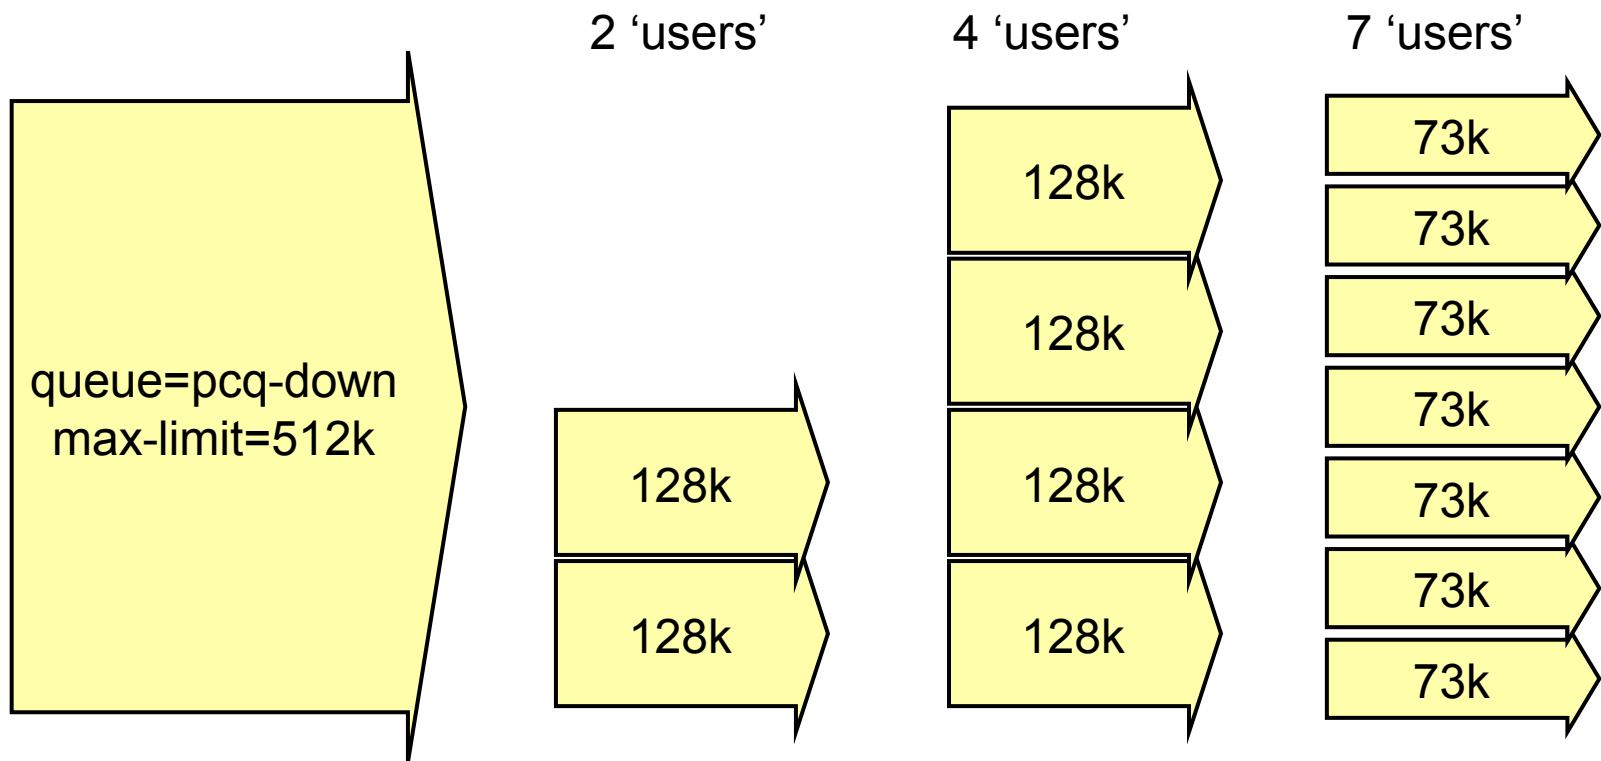

Skema PCQ

PCQ in Action (1)

- Pcq-rate=128000

Queue Tree & Mangle

- QueueTree adalah tool mikrotik yang memiliki kemampuan melimitasi bandwidth yang lebih lengkap dibandingkan dengan simple-queue.
- Dengan QueueTree memungkinkan untuk melakukan limitasi yang lebih fleksible karena supaya QueueTree bisa berfungsi maka harus menggunakan Mangle terlebih dahulu.

Mangle

- Mangle adalah cara untuk menandai paket-paket data tertentu, dan kita akan menggunakan tanda tersebut pada fitur lainnya, misalnya pada filter, routing, NAT, ataupun queue.
- Pada mangle kita juga bisa melakukan perubahan beberapa parameter pada IP Header, misalnya TOS (DSCP) dan TTL fields.
- Tanda mangle ini hanya bisa digunakan pada router yang sama, dan tidak terbaca pada router lainnya.
- Pembacaan rule mangle akan dilakukan dari atas ke bawah secara berurutan.

Mangle on Winbox - Example

Chain pada mangle

			
Prerouting	yes	yes	no
Input	yes	no	no
Forward	no	yes	no
Output	no	no	yes
Postrouting	no	yes	yes

Type of Mark

- Packet Mark
 - Penandaan untuk setiap paket data
- Connection Mark
 - Penandaan untuk koneksi
- Route Mark
 - Penandaan paket khusus untuk routing

Pada saat yang bersamaan, setiap paket data hanya bisa memiliki 1 conn-mark, 1 packet-mark, dan 1 route-mark

Connection Mark

- Adalah fitur mangle untuk menandai suatu koneksi (berlaku baik untuk request, maupun untuk response) sebagai satu kesatuan
- Untuk jaringan dengan src-nat atau kalau kita mau melakukan marking berdasarkan protokol tcp, disarankan untuk melakukan mark-connection terlebih dahulu, baru membuat mark-packet atau mark-routing berdasarkan conn-mark nya
- Mark-connection cukup dibuat pada saat proses request saja.

Passthrough

- Passthrough=no
 - berarti jika parameter sesuai, maka baris mangle berikutnya tidak lagi dibaca
 - value mangle sudah final, tidak diubah lagi
- Passthrough=yes
 - akan tetap membaca baris mangle berikutnya
 - value mangle bisa diubah lagi di baris berikutnya
- Biasanya pada :
 - mark-connection, passthrough = yes
 - mark-packet, passthrough=no

[LAB-5] QueueTree & Mangle

- Lakukan limitasi traffic dari client sekaligus dengan memisahkan type traffiknya.

Hotspot

Certified Mikrotik Training Basic Class

Organized by: **Citraweb Nusa Infomedia**

(Mikrotik Certified Training Partner)

HotSpot

- Hotspot System digunakan untuk memberikan layanan akses jaringan (Internet/Intranet) di Public Area dengan media kabel maupun wireless.
- Hotspot menggunakan Autentikasi untuk menjaga Jaringan tetap dapat dijaga walaupun bersifat public.
- Proses Autentikasi menggunakan protocol HTTP/HTTPS yang bisa dilakukan oleh semua web-browser.
- Hotspot System ini merupakan gabungan atau kombinasi dari beberapa fungsi dan fitur RouterOS menjadi sebuah system yang sering disebut 'Plug-n-Play' Access.

HotSpot Network - Example

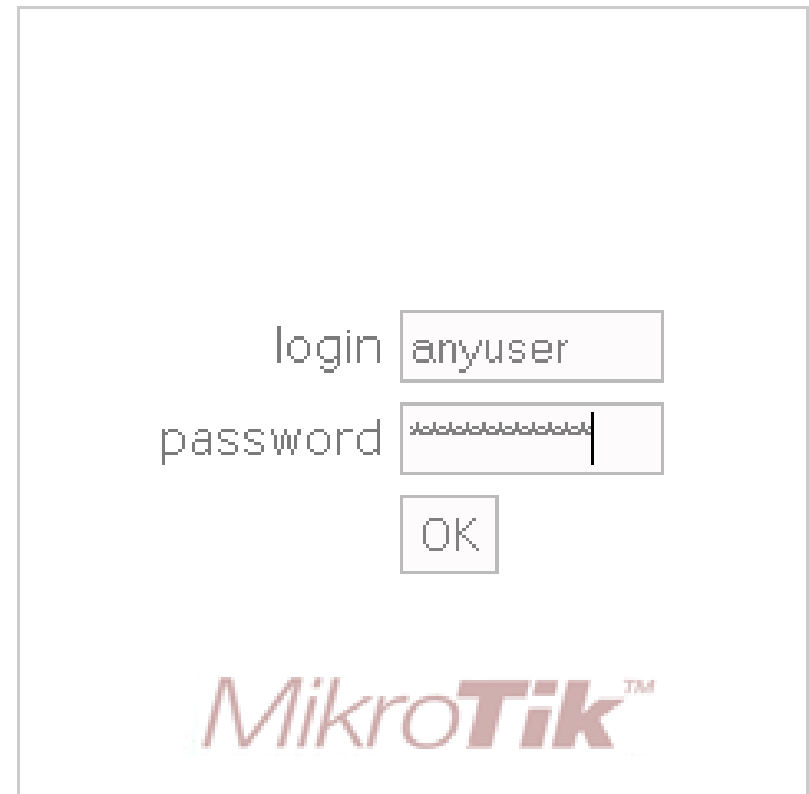

- Hotspot System bisa digunakan pada jaringan Wireless maupun jaringan Kabel bahkan kombinasi dari keduanya.
- Jaringan Hotspot bersifat **Bridge Network**

How does it work ?

- User mencoba membuka halaman web.
- Authentication Check dilakukan oleh router pada Hotspot System.
- Jika belum terautentikasi, router akan mengalihkan ke halaman login.
- User memasukkan informasi login.

Please log on to use the mikrotik hotspot service

A screenshot of a Mikrotik Hotspot login interface. It features a light gray background with a white border. At the top, the text "Please log on to use the mikrotik hotspot service" is displayed in a small, gray font. Below this, there are three input fields: a "login" field containing the text "anyuser", a "password" field containing a series of asterisks, and an "OK" button. At the bottom of the interface, the "MikroTik" logo is prominently displayed in a stylized, reddish-brown font.

Powered by mikrotik routers © 2005 mikrotik

How does it work ?

- Jika informasi login sudah tepat, router akan :
 - Mengautentikasi client di hotspot system.
 - Membuka halaman web yang diminta sebelumnya.
 - Membuka popup halaman status.
- User dapat menggunakan akses jaringan.

Welcome anyuser!

IP address:	10.1.100.1
bytes up/down:	23.1 KiB / 43.5 KiB
connected:	40s
status refresh:	1m

log off

HotSpot features

- Autentikasi User
- Perhitungan
 - Waktu akses
 - Data dikirim atau diterima
- Limitasi Data
 - Berdasarkan data rate (kecepatan akses)
 - Berdasarkan jumlah data
- Limitasi Akses User berdasarkan waktu
- Support RADIUS
- Bypass!

HotSpot setup wizard

- RouterOS sudah menyediakan Wizard untuk melakukan setup Hotspot System.
- Wizard ini berupa menu interaktif yang terdiri dari beberapa pertanyaan mengenai parameter setting hotspot.
- Wizard bisa dipanggil atau dieksekusi menggunakan perintah “***/ip hotspot setup***”
- Jika anda mengalami kegagalan dalam konfigurasi hotspot direkomendasikan reset kembali router dan konfigurasi ulang dari awal.

HotSpot Setup Wizard

- Pada Langkah awal Tentukan interface mana yang akan digunakan untuk menjalankan Hotspot System:

hotspot interface: (ex: ether1,wlan1,bridge1,vlan1)

- Tentukan Alamat IP untuk Interface Hotspot :

Local address of hotspot network: (ex: 10.5.50.1/24)

- Opsi Hotspot Network akan NAT atau Routing :

masquerade hotspot network: yes

- Tentukan IP-Pool untuk jaringan Hotspot :

address pool of hotspot network: 10.5.50.2-10.5.50.254

- Menggunakan SSL-certificate jika ingin menggunakan Login-By HTTPS :

select certificate: none

HotSpot Setup Wizard

- Jika diperlukan SMTP server khusus untuk Server hotspot bisa ditentukan, sehingga Server bisa mengirimkan email (misal email notifikasi). Konfigurasi SMTP server :
Ip address of smtp server: 0.0.0.0 (ex: 159.148.147.194)
- Konfigurasi DNS server yang akan digunakan oleh user Hotspot :
dns servers: 159.148.147.194,159.148.60.20
- Konfigurasi DNS-name dari router Hotspot, Hal ini digunakan jika Router memiliki DNS-Name yang valid (FQDN), Jika tidak ada biarkan kosong.
- Langkah terakhir dari wizard adalah pembuatan sebuah user hotspot :
name of local hotspot user: usrox
password for the user: 12345

HotSpot Setup Wizard (Step 1)

The screenshot displays the Mikrotik WinBox interface. The title bar reads "admin@192.168.30.1 (mejadepan) - WinBox v5.21 on RB433UAH (mipsbe)". The top status bar shows "Safe Mode", "Uptime: 00:39:39", "Memory: 107.3 MiB", "CPU: 2%", "Date: Oct/25/2012", "Time: 10:34:30", and "Hide Passwords".

In the left sidebar, the "Hotspot" menu item is highlighted with a red box. In the main menu, the "Hotspot Setup" button is also highlighted with a red box. A red line connects the "Hotspot Setup" button to the "Hotspot Setup" dialog box.

The "Hotspot Setup" dialog box is titled "Hotspot Setup" and contains the text "Select interface to run HotSpot on". Below this text is a dropdown menu labeled "HotSpot Interface:" with "ether3" selected. At the bottom of the dialog box are three buttons: "Back", "Next", and "Cancel".

HotSpot Server profiles

- Hotspot Server Profile digunakan untuk menyimpan konfigurasi-konfigurasi umum dari beberapa hotspot server.
- Profile ini digunakan untuk grouping beberapa hotspot server dalam satu router.
- Pada server profile terdapat konfigurasi yang berpengaruh pada user hotspot seperti :
 - **Metode Autentikasi**
- Ada 6 Metode autentikasi yang bisa digunakan di Server-Profile.

Authentication Method

- 6 Metode autentikasi yang berbeda pada server profile.

Hotspot Authentication Methods

- **HTTP-PAP** - metode autentikasi yang paling sederhana, yaitu menampilkan halaman login dan mengirimkan info login berupa plain text.
- **HTTP-CHAP** - metode standard yang mengintegrasikan proses CHAP pada proses login.
- **HTTPS** – menggunakan Enkripsi Protocol SSL untuk Autentikasi.
- **HTTP Cookie** - setelah user berhasil login data cookie akan dikirimkan ke web-browser dan juga disimpan oleh router di 'Active HTTP cookie list' yang akan digunakan untuk autentikasi login selanjutnya.
- **MAC Address** - metode ini akan mengautentikasi user mulai dari user tersebut muncul di 'host-list', dan menggunakan MAC address dari client sebagai username dan password.
- **Trial** - User tidak memerlukan autentikasi pada periode waktu yang sudah ditentukan.

HotSpot User Profiles

- Hotspot User Profile digunakan untuk menyimpan konfigurasi-konfigurasi umum dari User-user hotspot. Profile ini digunakan untuk grouping beberapa User.
- Pada User Profile, mampu melakukan assign pool-ip tertentu ke group user.
- Parameter Time-out juga bisa diaktifkan untuk mencegah monopoli oleh salah satu user.
- Limitasi juga bisa ditentukan di UserProfile
 - Data Rate (Kecepatan Akses)
 - Session Time (Sesi Akses)

User Profiles

Untuk melakukan log-off otomatis bagi user yang tidak ada traffic atau lupa menekan tombol log-off.

Untuk menentukan jumlah user maksimal jika menggunakan "username" yang sama.

Untuk menentukan bandwidth "per-user" yang menggunakan profile yang sama.

Format : **Upload / Download**

Transparent Proxy

HotSpot User

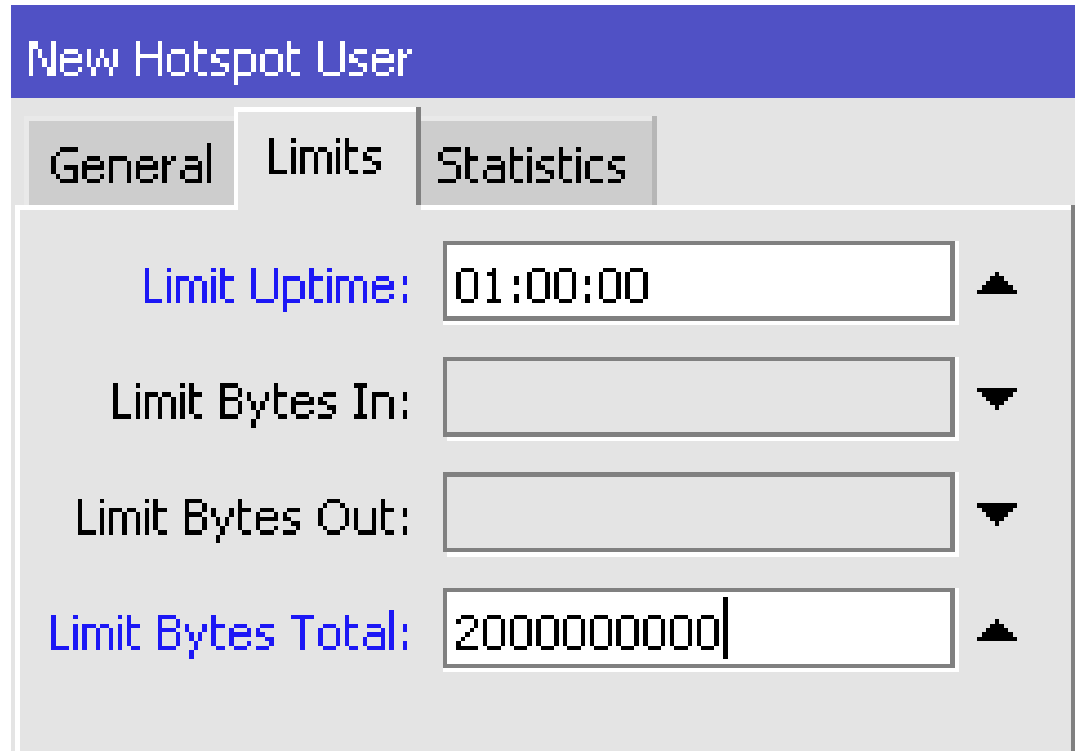

- Halaman dimana parameter username, password dan profile dari user disimpan.
- Beberapa limitasi juga bisa ditentukan di halaman user seperti uptime-limit dan bytes-in/bytes-out. Jika limitasi sudah tercapai maka user tersebut akan expired dan tidak dapat digunakan lagi.
- IP yang spesifik juga bisa ditentukan di halaman ini sehingga user akan mendapat ip yang sama.
- User bisa dibatasi pada MAC-address tertentu.

HotSpot users

The screenshot displays the Mikrotik WinBox interface for configuring Hotspot users. On the left, the navigation tree shows the 'Hotspot' menu item under the 'Tools' category, which is highlighted with a red box. The main window shows the 'Hotspot' configuration page with the 'Users' tab selected, also highlighted with a red box. A '+' button in the toolbar is highlighted with a red box, indicating the action to add a new user. The 'New Hotspot User' dialog is open, showing the 'General' tab. The 'Name' field is filled with 'user1' and the 'Password' field is empty, both highlighted with red boxes. Other fields in the dialog include 'Server' (set to 'all'), 'Address', 'MAC Address', 'Profile' (set to 'default'), 'Routes', and 'Email'. The 'enabled' checkbox at the bottom is checked.

User Limitation

- **Limit Uptime** batas waktu user dapat menggunakan akses ke Hotspot Network.
- **Limit-bytes-in**, **Limit-bytes-out** dan **Limit-bytes-total** batas quota transfer data yang bisa dilakukan oleh user.

The screenshot shows the 'New Hotspot User' configuration window with the 'Limits' tab selected. The 'Limit Uptime' field is set to '01:00:00'. The 'Limit Bytes In' and 'Limit Bytes Out' fields are empty. The 'Limit Bytes Total' field is set to '20000000000'. Each field has a small up or down arrow icon to its right.

Field	Value
Limit Uptime	01:00:00
Limit Bytes In	
Limit Bytes Out	
Limit Bytes Total	20000000000

Bypass! - IP bindings

- One-to-one NAT bisa dikonfigurasi secara static berdasarkan :
 - Original IP Host
 - Original MAC Address
- Bypass host terhadap Hotspot Authentication bisa dilakukan menggunakan IP-Bindings.
- Block Akses dari host tertentu (Berdasarkan Original MAC-address atau Original IP-Address) juga bisa dilakukan menggunakan IP-Bindings.

HotSpot IP bindings

The screenshot shows the Mikrotik WinBox interface for configuring Hotspot IP Bindings. The main window has a menu bar with 'Server Profiles', 'Users', 'User Profiles', 'Active', 'Hosts', 'IP Bindings', 'Service Ports', and 'Walled Garder'. Below the menu bar is a toolbar with icons for adding (+), removing (-), checking (✓), unchecking (✗), printing, and filtering. The main area is a table with columns: #, MAC Address, Address, To Address, and Server. A modal dialog titled 'New Hotspot IP Binding' is open, showing fields for MAC Address (AA:BB:CC:DD:EE:FF), Address (0.0.0.0), To Address, Server (all), and Type (regular). The Type dropdown menu is open, showing options: regular, blocked, bypassed, and regular. The dialog also has buttons for OK, Cancel, Apply, Disable, Comment, Copy, and Remove. The status 'enabled' is shown at the bottom of the dialog. The main window shows '0 items' in the table.

#	MAC Address	Address	To Address	Server
0 items

● ● ● | Bypass - WalledGarden

- **WalledGarden** adalah sebuah system yang memungkinkan untuk user yang belum terautentikasi menggunakan (Bypass!) beberapa resource jaringan tertentu tetapi tetap memerlukan autentikasi jika ingin menggunakan resource yang lain.
- **IP-WalledGarden** hampir sama seperti WalledGarden tetapi mampu melakukan bypass terhadap resource yang lebih spesifik pada protocol dan port tertentu.
- Biasanya digunakan untuk melakukan bypass terhadap server local yang tidak memerlukan autentikasi.

IP-WalledGarden

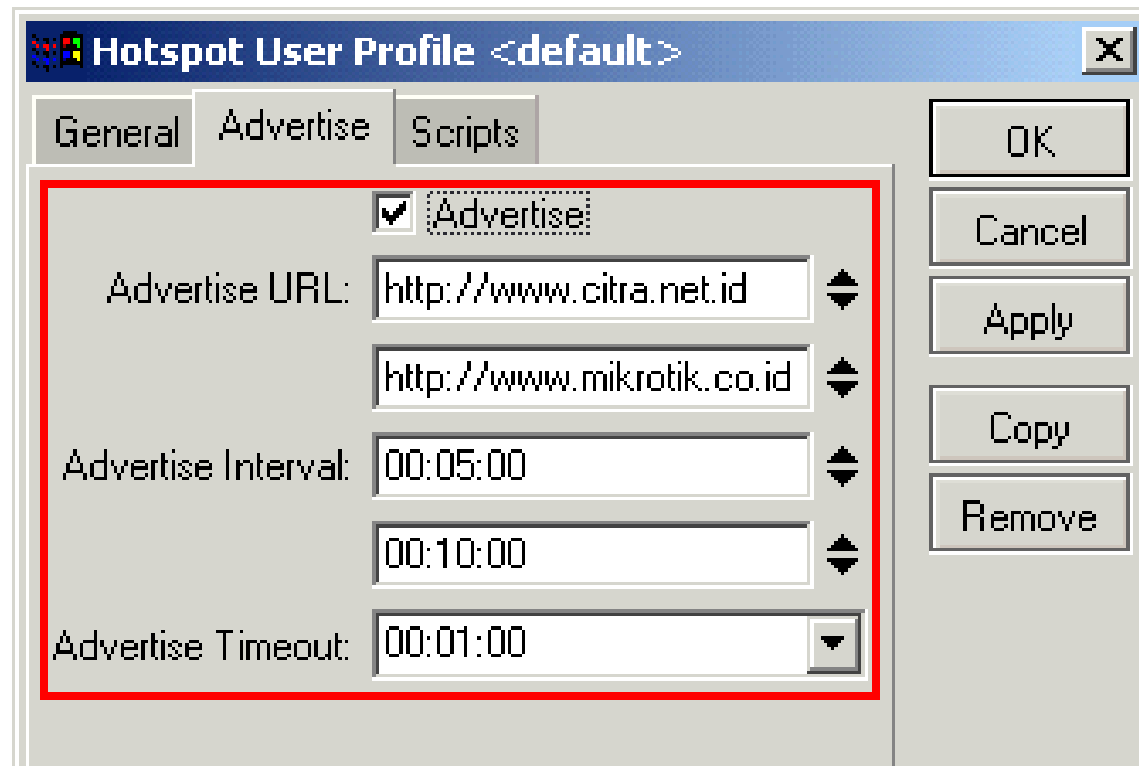

The screenshot shows the Mikrotik WinBox interface for configuring the Walled Garden. The main window is titled "Hotspot" and has several tabs: "Server Profiles", "Users", "User Profiles", "Active", "Hosts", "IP Bindings", "Service Ports", "Walled Garden", and "Walled Garden IP List". The "Walled Garden IP List" tab is active, and a red box highlights it. Below the tabs is a toolbar with icons for adding (+), deleting (-), saving (checkmark), discarding (X), and other functions. A red box highlights the "+" icon. Below the toolbar is a table with columns: "Action", "Server", "Src. Address", "Protocol", and "Dst. Port". The table is currently empty, showing "0 items". A dialog box titled "New Walled Garden IP Entry" is open in the foreground. The dialog has a title bar with a close button (X). Inside the dialog, there are several fields and buttons. The "Action" field has three radio buttons: "accept" (selected), "drop", and "reject". The "Server" field is a dropdown menu. The "Src. Address" field is a text input. The "Dst. Address" field is a text input. The "Protocol" field has a checkbox and a dropdown menu showing "tcp". The "Dst. Port" field has a checkbox and a text input showing "20-21". The "Dst. Host" field is a dropdown menu. On the right side of the dialog, there are buttons: "OK", "Cancel", "Apply", "Disable", "Comment", "Copy", and "Remove". A red box highlights the "Action" field and the "Protocol" and "Dst. Port" fields. At the bottom of the dialog, there is a checkbox labeled "enabled".

Advertisement

- Sama seperti yang digunakan pada fasilitas WalledGarden, Advertisement juga menggunakan ProxyEngine di Hotspot System untuk menampilkan popup halaman web (iklan) di web-browser para user yang sudah terautentikasi.
- Halaman Advertisement dimunculkan berdasarkan periode waktu yang sudah ditentukan, dan akses akan dihentikan jika pop-up halaman advertisement diblock (pop-up blocker aktif), dan akan disambungkan kembali jika halaman Advertisement sudah dimunculkan.

Advertisement

- Jika sudah waktunya untuk memunculkan advertisement, server akan memanggil halaman status dan meriderect halaman status tersebut ke halaman web iklan yang sudah ditentukan.

VPN Basic

Certified Mikrotik Training Basic Class

Organized by: Citraweb Nusa Infomedia

(Mikrotik Certified Training Partner)

VPN (Virtual Private Networks)

- Virtual Private Network (VPN) adalah sebuah jaringan komputer dimana koneksi antar nodenya **memanfaatkan jaringan public** (Internet / WAN) karena mungkin dalam kondisi atau kasus tertentu tidak memungkinkan untuk membangun infrastruktur jaringan sendiri.
- **Interkoneksi** antar node seperti memiliki jaringan yang **independen** yang sebenarnya dibuatkan koneksi atau jalur khusus melewati jaringan public.
- Pada implementasinya biasanya digunakan untuk membuat **komunikasi yang bersifat secure** melalui jaringan Internet, tetapi VPN tidak harus menggunakan standard keamanan yang baku seperti Autentikasi dan enkripsi.
- Salah satu contohnya adalah Penggunaan VPN untuk akses network dengan tingkat security yang tinggi di system reservasi ticket.

VPN Networks

- Virtual Private Network. Jaringan Data yang bersifat independen yang memanfaatkan infrastruktur jaringan public.

VPN Type

- VPN bisa diimplementasikan di berbagai type network :
- Routed Network :
 - VPN yang dilakukan di network yang sudah melewati multi hop router atau melewati internet. Contohnya adalah menggunakan **PPTP**.
- Bridge Network :
 - VPN yang diimplementasikan di network yang masih satu switch (satu network bridge). Contohnya adalah menggunakan **PPPoE**.

Point to Point Tunnel Protocol (PPTP)

- Penggunaan PPTP Tunnel:
 - Koneksi antar router over Internet yang bersifat secure.
 - Untuk menghubungkan jaringan local over WAN.
 - Untuk digunakan sebagai mobile client atau remote client yang ingin melakukan akses ke network local (Intranet) sebuah perusahaan.
- Sebuah koneksi PPTP terdiri dari Server dan Client.
 - Mikrotik RouterOS bisa berfungsi sebagai PPTP server maupun PPTP Client atau gabungan dari keduanya.
- Koneksi PPTP menggunakan TCP port 1723 dan IP protocol 47/GRE.
- Fungsi PPTP clients sudah tersedia atau termasuk dalam sebagian besar Sistem Operasi.

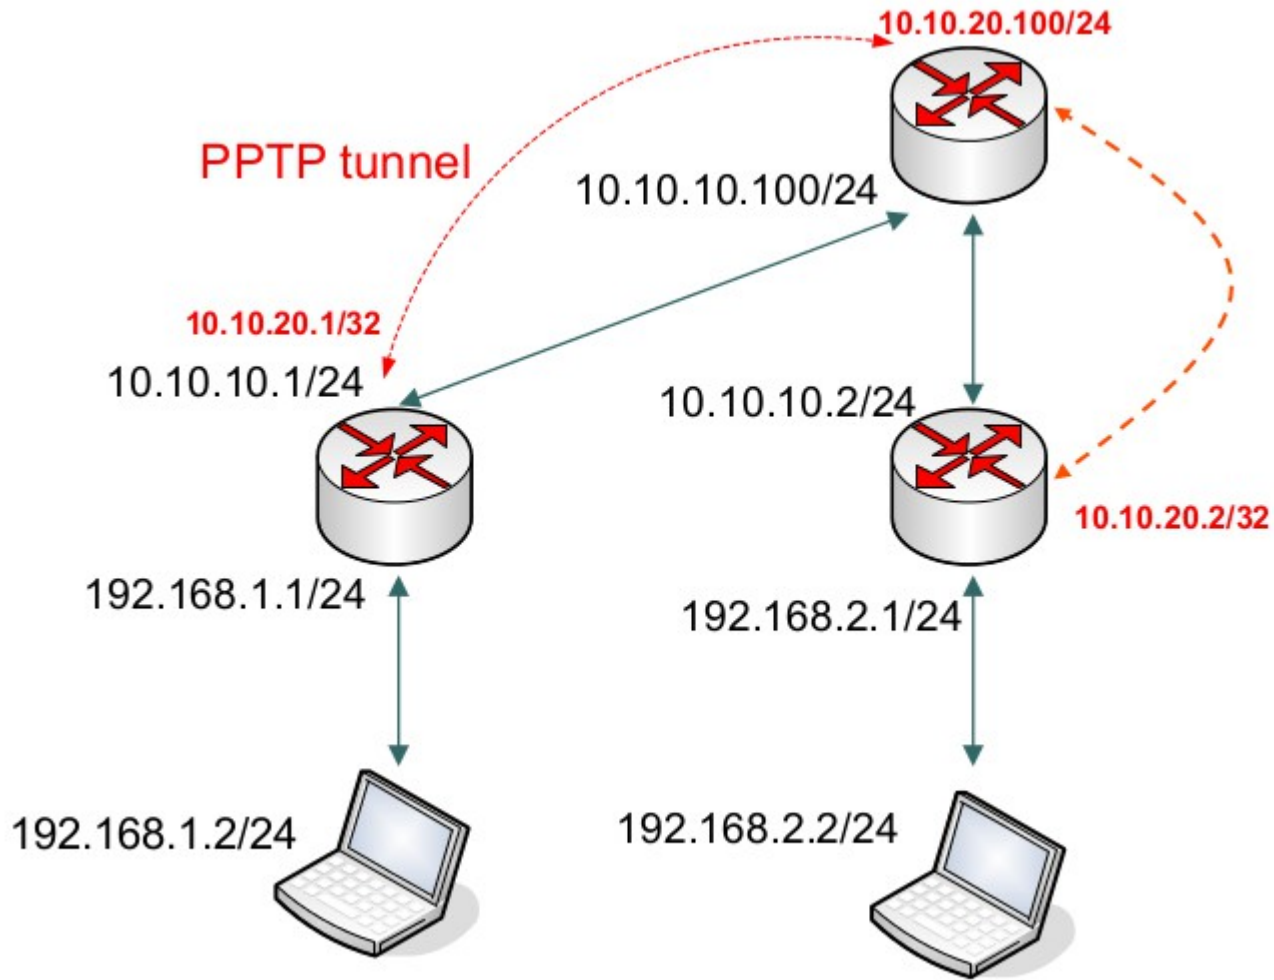

PPTP Client Configuration

The screenshot illustrates the configuration process in Mikrotik WinBox. On the left, the 'PPP' menu is highlighted in red, and a sub-menu is open with 'PPTP Client' selected, also highlighted in red. A red arrow points from the 'PPTP Client' menu item to the 'New Interface' dialog box. In this dialog, the 'Dial Out' tab is selected and highlighted in red. The 'Connect To' field is set to '0.0.0.0'. The 'Allow' section has checkboxes for 'pap', 'mschap1', 'chap', and 'mschap2', all of which are checked. The status bar at the bottom shows 'enabled', 'running', 'slave', and 'Status:'.

● ● ● | PPTP Client Configuration

- **Server Address** – Parameter server PPTP yang akan di dial
- **User** – Parameter username
- **Password** – Parameter password
- **Profile** – Parameter optional untuk mengaktifkan enkripsi pada link pptp atau tidak.

[LAB-1] PPTP Tunnels - Client

[LAB-1] PPTP Tunnels - Client

The screenshot displays the Mikrotik WinBox interface for configuring a PPTP Client. The main window is titled "Interface List" and shows a list of interface types. A red box highlights the "+" icon in the top-left corner of the "Interface List" window, indicating the "Add" button. Another red box highlights the "PPTP Client" option in the list of interface types. A third red box highlights the "New Interface" dialog box, which is open and shows the configuration for a PPTP Client. The "New Interface" dialog has several tabs: "General", "Dial Out", "Status", and "Traffic". The "General" tab is selected, and the following fields are visible:

- Connect To:** 10.10.10.100
- User:** user1
- Password:** *****
- Profile:** default-encryption
- Add Default Route
- Allow:**
 - pap
 - mschap1
 - chap
 - mschap2

The "Status" tab is also visible, showing the status of the interface as "disabled".

[LAB-1] PPTP Tunnels - Client

○ Membuat PPTP-Client :

- “Username” dan “Password” disesuaikan dari konfigurasi server.
- “Connect-to” adalah parameter Alamat IP dari PPTP-Server.
- “Add-Default-Route” adalah parameter jika akan menggunakan koneksi PPTP sebagai gateway utama.

○ Membuat PPTP-Client Interface :

```
•/interface pptp-client add name=pptp-out1  
connect-to=10.10.10.100 user=user1 password=user1
```

PPTP Server Configuration

The screenshot shows the Mikrotik WinBox interface for configuring PPP services. The 'PPTP Server' button is highlighted with a red circle. A red arrow points from this button to the 'PPTP Server' configuration dialog box. In the dialog, the 'Enabled' checkbox is checked and highlighted with a red dashed box. Other settings in the dialog include Max MTU: 1460, Max MRU: 1460, MRRU: (empty), Keepalive Timeout: 30, and Default Profile: default-encryption. Under the 'Authentication' section, 'pap' and 'chap' are unchecked, while 'mschap1' and 'mschap2' are checked.

PPTP Server Configuration

- **Service** PPTP server bisa diaktifkan pada PPP configuration
- **Default Profile** digunakan untuk menentukan group dan memberikan konfigurasi dasar seperti ip address, penggunaan enkripsi dan juga limitasi user
- Default Profile digunakan untuk user-user yang tidak terdapat di database local router contohnya jika autentikasi user menggunakan RADIUS.

[LAB-2] PPTP Tunnels - Server

Aktifkan PPTP server, pastikan menggunakan profile “default-encryption” supaya link VPN terenkripsi.

The screenshot shows the Mikrotik WinBox interface for configuring PPP. The 'PPTP Server' button in the top toolbar is highlighted with a red box. A red arrow points from this button to the 'PPTP Server' configuration dialog box. In the dialog, the 'Enabled' checkbox is checked and highlighted with a red box. The 'Default Profile' dropdown menu is also highlighted with a red box and set to 'default-encryption'. The 'Authentication' section at the bottom shows 'mschap1' and 'mschap2' checked, while 'pap' and 'chap' are unchecked.

Name	Type
R ptp-out1	PPTP Client

PPTP Server

- Enabled
- Max MTU: 1460
- Max MRU: 1460
- MRRU: [dropdown]
- Keepalive Timeout: 30
- Default Profile: default-encryption [dropdown]
- Authentication:
 - pap
 - mschap1
 - chap
 - mschap2

[LAB-2] PPTP Tunnels - Server

The screenshot shows the Mikrotik WinBox interface for configuring PPP secrets. The 'Secrets' tab is selected, and a 'New PPP Secret' dialog is open. The configuration fields are as follows:

Field	Value
Name	pptp-user1
Password	****
Service	any
Local Address	10.20.30.40
Remote Address	192.168.192.168
Remote IPv6 Prefix	

Buat User PPTP di "PPP-Secrets" pastikan isikan "Local Address" dan "Remote Address".

PPP - Secret

- PPP – Secret adalah data user untuk Service VPN (PPTP, PPPoE, OpenVPN dll) yang ada di local database router, semua konfigurasi user seperti username, password, alokasi ip address, profile dan limitasi bisa dilakukan di sini.
- Ada dua pilihan melakukan assign ip ke user yaitu menggunakan setting di secret (fix ip) atau menggunakan profile (pool ip).
- VPN User juga bisa menggunakan database user external yaitu menggunakan RADIUS seperti UserManager atau FreeRadius.

PPPoE - Point to Point Protocol over Ethernet

- Penggunaan PPPoE Tunnel:
 - Koneksi antar Client dan Router yang bersifat secure.
 - Untuk digunakan sebagai koneksi internet bersifat secure di jaringan local (LAN).
- Sebuah koneksi PPPoE terdiri dari Server dan Client.
 - Mikrotik RouterOS bisa berfungsi sebagai PPPoE server maupun PPPoE Client atau gabungan dari keduanya.
- Koneksi PPPoE menggunakan Ethernet frame sebagai protocol transportnya.
- Fungsi PPPoE clients sudah tersedia atau termasuk dalam sebagian besar Sistem Operasi.

PPPoE Server

The image shows the Mikrotik WinBox interface for configuring a PPPoE Server. The main window is titled "PPP" and has several tabs: "Interface", "PPPoE Servers", "Secrets", "Profiles", and "Active". The "PPPoE Servers" tab is selected and highlighted with a red box. Below the tabs is a toolbar with a red circle around the "+" icon. A table below the toolbar has columns for "Service ...", "Interface", "Max MTU", and "Max MRU".

The "New PPPoE Service" dialog box is open on the right. It contains the following fields and options:

- Service Name:
- Interface: (dropdown arrow)
- Max MTU:
- Max MRU:
- MRRU: (dropdown arrow)
- Keepalive Timeout: (dropdown arrow)
- Default Profile: (dropdown arrow)
- One Session Per Host
- Max Sessions: (dropdown arrow)
- Authentication options:
 - pap
 - chap
 - mschap1
 - mschap2
